If there is a case of dishonesty or ignorance worse than this, known among the AMERICAN FANCIER readers, I would like to hear of it. Such judging is detrimental to the Fancy and should not be allowed to place the awards. After purchasing and striving to maintain a higher quality of birds, the Associations should see that the proper men, who are unapproachable should be selected to officiate at shows under their management.

Madison Square Garden

AWARDS

LIGHT BRAHMAS—c. 1, Klu Bros; 2-5, H. Rigby; 3, Balch & Brown; 4, C. P. Nettleton; h. 1-3-5, Klu Bros; 2-4, Balch & Brown; ckl. 1-3-5, Balch & Brown; 2, Woodcrest Farm; 4, Nettleton; pul. 1-3-4, Balch & Brown; 2, Woodcrest Farm; 5, Klu Bros. BUFF—All to Robt. D. Water Fowl Reply.

Mr. Jager, in your last issue, has something to say of E. Indians ducks. According to Mr. Jager:

"The East Indians are supposed to come from East India, at least so some English cousin told us, when he tried to make hay while the sun shone, in selling their eggs and stock."

It was a cute story, and a captain of an East India sailing vessel figured prominently in the deal, to give color to the story. All the water, however, that the first birds in England crossed in getting to that land was the channel, when they came from Holland.

Your readers will see an imputation of something like fraud cast on English fanciers by one who speaks of the East Indias, as a name for ducks, instead of a part of Asia, who speaks of a deal, when there was no deal, and of birds going to English, when he means, and without a shadow of proof, asserts, that the first East Indian ducks that got to England came from Holland.

Years ago Mr. Jager proved he knew nothing of the breed, by giving a false description in print. He also then stated, also in print:

"The East India duck, of America, is an ornamental duck, pure and simple, and fully unlike the profit-producing East Indias of the Dutch.

"Her cradle stands in East India, and as one of her first importations into England came from Buenos Ayres, we often find this name used. The Belgian duck of this name is a medium-sized bird, used for practical purposes, and for this reason fully unfit to compete against the real small article in shows."

Your readers by looking first at one, and then at the other statement, by the same writer, can draw their own conclusions. My aim is to prevent them from being misguided, and to stop any from selling the little black ducks of Northern Europe over, for the purpose of competing in East Indian classes. I would say that it has been tried and they were found to be disqualified under the standard by any competent judge.

The much neglected water fowl deserves the attention you are directing that way, and the more intelligent and trustworthy the better it will be, therefore the only domesticated bantam duck, with color that attracted the clever Japanese commissioners, should not be depreciated.

Duck breeders know Mr. Jager is especially qualified to speak on the Swedish duck, and any authentic information as to their origin, or manufacture, with the method adopted to get them into the standard, when Mallards, Mandarins, Wood ducks, with several other varieties, were left out.

Is this not work for the Water-fowl Club of America, or the great International Water-fowl Club, to take up, and how is it, they are not active?

EDWIN MORRIS.

Zanesville, Ohio.

At the last regular meeting of the Zanesville Fanciers Association it was decided to hold a Bench Show in connection with the Poultry Show, the request being made by quite a number of fanciers in this vicinity, and from the interest now manifested it will be a success.

The association is offering twenty silver cups, valued at $450.00, also numerous cash and other specials on the poultry exhibit, and for the bench show a fine silver cup, cash and other specials, all worth going after.

WM. E. THOMAS,
Secretary.

Water Fowl

THE annual report of the Secretary of Agriculture for 1907 is to hand. and what glorious reading it is making for the man who tills the soil and his cousin, who raises stock and poultry with the products of the soil. $7,412,000,000 has been produced by the farms that were threatened with almost a failure during the first half of the year. Corn, the ruling crop for fattening all kinds of stock—and this includes the duck—ranks chief in importance. It is 26% above the value average of the crops of the preceding five years, although a trifle less than the 1906 crop.

The total wealth production of the farms exceeds 1906 by 10%. It is 57% better than 1899. Yes; we are progressing.

"The poultry and egg products for 1907 should be estimated at more than $600,000,000 in value. In fact, these products were worth more than the wheat crop."

* * * * * *

The value of all poultry products is steadily increasing, making it a better paying proposition as the years roll by. "In 1899 the farm price for eggs was a trifle over 11 cents per dozen; in 1907 it was over 18 cents. Dressed poultry sold in New York in 1899 for 10¾ cents a pound; in 1907 for nearly 15 cents."

* * * * * *

Let us all, duck as well as goose men, study all of this report during one or more of these long winter evenings, when we rest after the day's toil next to the heat giving stove. We will feel better in our lot; the hold we have on life and the future will be tighter and more secure, when we know we are getting on and improving all the time. No matter what the cereal producer may be compelled to ask for his grain, our ducks and geese will have to have it, if we desire them to keep up their rank in the procession of progress to the betterment of conditions for all mankind and us, the raisers included. The demand for the birds is and always has been there and the increased price for them shows, that we were lacking in keeping up the supply to fill that demand.

* * * * * *

The duck farms that are blossoming out from year to year in places where at times the least expected, and that make headways in spite of high grain and the old shake-heads of the community, are proof that their products are in demand and find ready takers at paying prices. In fact, the duck business is one of the surest, if not the surest way to make money out of market poultry culture. Give a duck its feed and the rest will come easy. Do not get cold feet, while the breeders are getting in condition for laying. It will cost a good penny to keep a large flock of them till they are producers and it will take several pennies to get the youngsters produced fit for the slaughter house. Start slow, be content with a dozen old ducks for a start and learn your way, husband your moneys and save every penny without stinting the birds, that it is possible to save, and you will have learned the secret of saving thousand pennies and making money when the flock gets larger.

* * * * * *

Whatever is worth undertaking should be done well. Haphazard methods are no methods at all. The stories of successful duckeries East and West, men who make annually from $3,000 to $8,000 clear money, should be learned by heart. We cannot do better than to imitate them. Wise is he who reads as he runs. Do not go it blindfolded. The very best way for a man who has the ambition and the capital to start a large farm, is to first go and be a worker on a good farm. Let him learn the little ins and outs that make or mar success personally. The road to perfection is not a royal road; we all can travel it. What has been done, can be done again and a good product will always find appreciative takers.

We invite our readers to follow closely the serial now beginning in this department, entitled "American Market Duck Culture." It is written by a man who has raised tens of thousands of all kinds of ducks under all kinds of conditions, and it no doubt will aid any one who contemplates going in the business. All those that have raised ducks, be it with good, bad or indifferent success, are invited to open up and let us have their ideas, trials and experiments. If we all go forward to the perfection of one branch, we will certainly reach the goal. Let us hear from all of ye, yes, and send in photos of your stock. Let us all get acquainted.

The Mandarin

IF we would classify the ducks along asthetic lines, Mandarins and Wood Ducks would fill a class by themselves heading the list. Both varieties have beautiful distinctions of themselves. Both are dear to the true fancier's heart, that admires the most rare colors produced by nature, and both are splendidly adapted for domestication, giving a docile spirit and attachment for all extras that a kind keeper may furnish.

Even the best of our winter shows are apt to coax entries of Mandarin and Wood Ducks, knowing that the public is never tired of beholding them in their delightful behavior to each other and to admire the rare color combinations fit for a tropical bird. Well mated pairs find always ready takers at good prices and our better situated class of citizens, who have country homes and lawns and ponds, are always willing to have a few pairs for decorative purposes.

As the illustration shows, Mandarins have an unique appearance. The drake in full plumage is a "beauty and joy forever." His wing fans and crest, while large, are yet in true shape and keeping with the general body formation. The top of his head and the extended head feathers are dark green, with a blue metallic lustre, the face is creamy white, shading into a rusty lemon. The neck feathers grown out in the shape of a collar, are red brown; the lower part of the neck is violet, having a strong metallic sheen. Breast is banded on both sides with two white, black-bordered stripes. Sides of body light brown, showing fine waves of black. Back orange to brown, lower body white. The erect part of the wingfans are a bright red brown, with a band of white lined off again with a small band of black. Wing coverts are metallic green, flights grayish brown, tail the same. Eye is black, bill carmine red, feet a reddish yellow.

The duck is less attractive in colors. General body color is a grayish brown, head cleaner gray without sheen. The breast is white with weak colored light brown spots; lower body white; sides of body with brown spots. Wing bars large. green with a metallic lustre. Eyes dark brown, encircled with a small white ring, an indistinct line of which goes back to the ear. The drake in undress uniform, which he begins to wear during June, often called the summer dress, resembles the coat of the duck in all essentials.

Mandarins are natives of Northern China, Japan and the lands adjoining the Amur. She is found there everywhere, but never in abundance or in flocks. Li-Chi-Ki is her native name. She is to the natives a symbol of domestic bliss, trust and happiness. Wedding parties on the way to their places of worship are accompanied by a pair of ducks. The supposition is, that a pair once mated stay mated for life, and should one or the other die, the other would refuse another partner and remain single, if the grief for the lost one failed to cause an early death for the remaining one. My experience with them upholds this supposition, as one pair that had been mated for a trifle of over two summers showed, when a rat caught the female. The drake pined slowly away, refused to eat or drink, and finally died. As I was unable to give him another partner, I am unable to say what he would have done had he had the chance to mate again.

The duck lays from seven to fourteen eggs; prefers for a nesting place a hollow tree, which she makes temptingly snug with feathers and down. Depending on the season, she begins to lay from April to June. In twenty-eight

days the ducklings, if near the water, jump down into it, or else are carried by the old duck to it. The natural food is strongly of an animal nature. In keeping Mandarins in domestication, stress should be laid on the fact, that bugs, worms and insects, along with plenty of tender greens and water vegetation, are necessary for success. The young are very hardy and easy to raise. Although the value of this breed has dropped considerably since first imported into Europe, when in 1850 the London Zoo paid £70 (about $350) for a pair, yet, $20 or more per pair can be had almost at any time. All in all it pays good to keep and breed them.

But aside from the paying quality in cold coin, we believe in breeding them, as there is nothing more contagious than the love of natural history, nor do we believe there is anything more deeply implanted in the human mind than the love of animals. We are not going into the question why or how this exists, but we wish to remove a difficulty. Many people would like to keep some tame wild fowl, but they think it impossible—they imagine such luxuries form part of the privileges of those who have

Thirty large domains,
Forty grand chateaus,
Fifty fertile plains,
Sixty suits of clothes, etc.

No such thing. We lately saw a pair of Mandarin and a pair of Carolina ducks reveling in luxury. They were tenants of a washing tub sunk in the ground. Thus spoke our English contemporary *Poultry* of them, and in truth it spoke, for it is not the space at disposal or the amount wasted in elaborate contraptions, that makes the birds enjoy their enforced confinement, but the care and personality of the keeper, who knows his pets and furnishes them what nature intended they must have.

A small space, well sodded, and a pond with banks on the easy incline, a heap of brush for to cover in, or a natural thicket of weeds or bushes, will make them a home that they will pay for in joy furnished in a short time. A three-foot fence will confine all pinioned birds or, if it is desired that the birds have the full use of their wings, overhead wiring, six or more feet high, will accomplish it. A stump of a tree, well branched, would in this case make an excellent roosting and nesting place for them, if placed near the water, and with its base well covered by shrubs.

Water Fowl Notes

AS the conditions of breeding and keeping change, so change the birds in whole or part. None change so quickly as ducks. No variety in fowldom deteriorate so quickly with inbreeding as ducks and none, on the other hand, improve so quickly if all conditions governing size, vigor and blood lines are right, as ducks. Darwin admits the truth, that "the conditions of life appear to act in two ways—directly on the whole organization or on certain parts alone, and indirectly by effecting the reproductive system." As an abundance of the right food will produce size at all times, as the nature of the food will more or less influence the coloring matter in the feathers, and the climate and general modes of life influence the heaviness or material of the coat, so will a persisting in these conditions produce these often small dissimilarities into glaring differences until the old or stock blood characteristics are almost lost or at least appear only in a dormant condition.

* * * * * *

Let us take the well known market duck, the Pekin. A few decades of breeding from the large easily fattening birds have given us a breed that cannot be compared with the stock, as they were originally imported into this country. 'Tis true, wherever the blood did not nick or where ignoring breeders persisted in mating large to large without keeping tab on vigor and vim, sore eyes in the young and weak legs have set in, but as a rule, things have been right and the large market duck farms of today, as they grace Long Island and other centres, are directly due to the improvements along the line of greatest utility—fast growing, quick fattening, large size combined with sexual vigor and egg-laying. The old type of Pekin had wings that could be called wings, wings that could carry the bird up or down hill and the birds were foragers par excellence. In the true Pekin of today, the wings are but a fragment of their former size and the time will come when their wings will be but rudimentary. Parts that are not used will deteriorate through disuse, and habits that are not persisted in will finally be forgotten. Let us all and forever bear this law in mind and improve that which seems the best and loose that which does not pay or hampers the breed in its evolution for perfection.

* * * * * *

The Mallard, the mother of almost all duck breeds, shows the great change that domestication brought in the greater sexual activity of the males. Where the birds in a wild state mate in pairs, drakes, even if only removed two generations from the wild, will accommodate four and more ducks. A few generations of domestication will make the changes apparent in giving a larger, coarser bird, less finely marked, a shorter wing and heavier legs. The wisdom therefor of going back to nature from time to time in getting wild blood to refreshen color and brush up vigor and agility, is one of the paramount duties of Mallard breeders.

* * * * * *

Our contemporary, *Farm Poultry,* allows the great Brussel's poultry authority, L. Van der Snickt, to say: "The family of the prairie ducks of the Scheldt are worth study for size and color of feather and bill. Breeding the La Plaigne and Huttegem ducks begins at the end of October and lasts till the end of February. They are hardy in the extreme. A large, all white duckling could not stand the conditions, and medium-sized are preferred. The best are white with dark blue bill, the half blue or half black. Sometimes specimens are found that are buff without any white markings. The Merchtem duck looks like an Aylesbury, but has not the useless dewlap, and the bill instead of turning towards yellow is occasionally spotted with blue. The large blue ducks of Termonde is to the meadow ducks what the Bruges Gaem is to the Turkey Headed Maline, restoring vigor to the debilitated and lymphatic stock. It should not have any white on feather or bill, and must be large in body. The small offspring of large birds are strong, the large offspring of small birds are weaker."

What a lot of information to the point. Let us all read it, once, twice, yes, and three times; let us all learn the lesson by heart, where in the few words given above, Van Der Snickt has given the cream of all laws governing duck culture.

The ducks as mentioned begin laying in October and keep it up all winter. Have we anything to equal it? It is true early hatched youngsters of our Indian Runner and Pekin varieties are apt to lay, are beginning to lay under good rations often as early as August, but are the eggs fertile or will the birds keep it up? No; so far the best of us have failed to make a Pekin duckling, that began late summer laying, to keep it up. The first cold weather would see her changing her mind. The most we have been able to accomplish was to have eggs come in end of November and even then it would be less than five per lent. of the total number of birds kept.

We are far from having stock that can accomplish similar feats. We have erred along the line of size, a size that demanded regular feeds and feeds of a right character to keep it up from generation to generation and in catering to this end alone, we have stunted the natural activity of the birds. Why was it, when a few enterprising English cousins loaded us down with Indian Runners some years ago, that we hailed them with delight and became giddy over the results to be obtained in eggs? Was it not, because we had been accustomed to ducks that are slow shellers out? We took the Runners to our heart and were delighted to have them and to get eggs practically all the year around and found it paid and that the profits were good, but alas, when we began to breed for feather and increased weight, when we tried to make Runners become Pekin-sized, we sacrificed a good many of the very points that made the breed valuable. The boom of that variety is now passed and has given room to saner methods of keeping. The time is near when all who care for a paying duck, a duck that can and enjoys to hustle for a large share of its living, will have a small bunch of them on the home farm. Breeding ducks for market is all right in its place, a well kept duck farm where regularity of feeding will produce size quickly, but for the farm or individual, who cares for a small bunch of payers, Indian Runners are the most desirable. They will free the meadows from bugs and insects, will be on the hustle and go from early till late and produce at the rate of an egg per day per hen for the best part of a season.

Indian Runners are the ducks of the veldt. They are made in Huttegem. Let us study Van Der Snickt's words for once and be convinced, that the small or medium offspring of large birds are strong and best for paying birds. Length of body, erect carriage, a round clear eye, and a pair of legs that can run, are all indications that our Runners have the true get-there-qualities.

* * * * * *

A testimonial, the best that could be given to the duck raisers of La Plaigne and Huttegem, we find in the fact that the late William Cook, the famous originator of all that crows and grows under the magic name of Orpington, adopted the all blue duck of Termonde in making them better known to farer circles as the Orpington duck. We credit him with an excellent judgment in adopting that variety, although we cannot find excuses for him to palm an old variety off to us under another name. We admire, however, the consistency of the man that could make Lincolnshire Buffs, Germany's smooth-legged Langshans and the Termonde ducks all answer to Orpington. Consistency is a priceless jewel and as the finale has proven that it paid, we shall refrain from going farther back in its somewhat cloudy history.

Pigeon Awards at Madison Square Garden.

POUTER—BLACK—1907, 1, J. E. Bowers. BLUE—c. 1, C. A. Woop; 2, Bowers; 1907, 1, Murman. YELLOW—c. 1, Murman; 2, Bowers. WHITE—c. 1, Bowers; h. 1, Bowers.

PIGMY—BLACK—c. 1, Dr. L. H. Jones; h. 1, Jones; 1907, c. 1, W. J. Lincoln; 2, C. E. Long; 3, Jones; h. 1907, 1-2, Jones. BLUE—c. 1-2, Geo. Josenhaus; 3, Lincoln; 4, E. E. Gries; h. 1-4, Jones; 2-3, Josenhaus; 1907, c. 1-2, Josenhaus; 3, Long; 1907, 2-3, Jones; 1, Josenhaus. RED—c. 1, Jones; 2, Lincoln; h. 1, Jones; 2, Gries; 1907, c. 1, Jones; 2, Gries; 3, Lincoln; 1907, H. Jones. A. O. C. ORIENTAL TURBIT—c. 1-4, Ehinger; 2-3, Ashley; h. 1-3-4, Ehinger; 2, Ashley; 1907, 1-2-3-4, Wm. Ehinger.

Turbits awards and criticism in other columns of this issue.

MAGPIES—Two exhibitors showing—Ehinger and Rowland; Black, 1907; Red, 1907; Yellow C.; H. 1907; Blue Cock, Blue Hen, Blue 1907. A. O. C. Hen; also 1907 first in all above classes, Wm. Ehinger; Rowland winning the balance.

(Continued in January 15 Issue.)

It was a grevious disappointment to the writer to have been present at Madison Square Garden only Monday and Tuesday. A case of grip started Wednesday which kept me in the house until the day before Christmas.

LEONARD W. LOTT.

* * *

Mr. H. V. Crawford, secretary of the New York show, is to be congratulated on the show's success. This season has been a very unsuccessful one for many of the poultry exhibitions held in different sections of the country.

No one could be more efficient and capable than Mr. Chas. M. Griffing, treasurer, who assisted Mr. Crawford and exhibitors in many ways.

Spratt's Patent cooped the show, and Mr. Rackham told the writer that the original cost for all the coops was about $21,000.

On Monday, December 16th, Madison Square Garden was transformed from a rolling pine bicycle track to a mammoth poultry exhibition, and as the bicycles and the track of the six-day race, which was held the previous week, were being removed Monday morning, the birds were coming in, and at ten o'clock Tuesday morning started the 19th Annual Exhibition of the New York Poultry, Pigeon and Pet Stock Association, of which Mr. T. A. Havemeyer is president. Nineteen judges placed the poultry awards, and nine the pigeons. The Indian Pit Games were judged early, and Mr. Wm. K. Vanderbilt was a winner. Chas. E. Brundage, Danbury, Conn., won the Havemeyer Trophy for the third year in succession. There were thirty-seven Black and White Orpingtons imported from England; they were a splendid lot and won several prizes.

Twenty-five Silver Cups. Fifteen Cash Specials, and nearly 100 other valuable specials, is what the Toledo, O., show, January 21 to 28, '08, is offering. besides regular premiums of $1.50 first, 75c second, 25c third, fourth and fifth ribbons. Uniform cooping, too. McClave, Riggs and Butterfield, judges. Get a premium list of L. C. Taylor, secretary, Gibsonburg, Ohio.

* * *

North Adams Show.

The Northern Berkshire Poultry Association will hold its third annual show in North Adams, Mass., January 21 to 24th, inclusive.

This is an up-to-date poultry association in every recpect, and this show is sure to be one of the best shows held this winter. They have introduced many new features, some of which are as follows. On Wednesday evening, January 22, I. K. Felch, the veteran judge of poultry, will give a talk in the hall on "Poultry." Thursday afternoon and evening there will be a hen picking contest. In the afternoon a prize of $5 will be given to the child under 15 years who will kill and pick a hen the quickest. A prize of $10 will be given to the adult who will pick one the quickest, Thursday evening, and $2 will be added if the world's record is broken.

There will be a turkey guessing contest, and many other attractions. This association is offering, in addition to cash and other special prizes, 35 beautiful silver cups.

This association has made a reputation for itself for honesty and square dealing in the three years they have been in business, and is composed of young, energetic and reliable business men. The past shows of this association have demonstrated the fact that this is one of the best places to advertise and sell birds.

The premium list and entry forms are now ready, and will be mailed on application to the secretary, C. M. Ottman, North Adams, Mass.

* * *

American Columbian Plymouth Rock Club.

At a meeting held at Madison Square Garden, December 19th, the American Columbian Plymouth Rock Club was organized and the following officers elected: President, D. M. Green, Syracuse, N. Y.; Vice-President, F. M. Clemans, Mechanicsburg, Ohio; Secretary and Treasurer, E. B. Andrews, 9 West 17th street, New York City. The meeting, while not large, was an enthusiastic one, and a bright future, based on the experience of those breeding them and the opinion of many of our leading fanciers, is predicted for Columbian Plymouth Rocks and the club organized in their interest. A cordial invitation is extended to all interested in this popular new variety to join the club and assist in perfecting the Columbian Plymouth Rock and bringing it to the front. Those joining prior to February 1, 1908, will go on record as charter members. For further information, membership blanks, etc., address E. B. Andrews, secretary, 9 West 17th street, New York City.

* * *

The Twelfth Annual Poultry Show of the National Fanciers' and Breeders' Association will be held January 22-29, 1908. Liberal cash, special and general prizes will be offered.

The Second Annual Meeting of the American Poultry Association, Mid-West Branch, will be held in the Club rooms of the show.

For premium lists and other information address, Fred L. Kimmey, secretary, 105-113 S. Clinton St., Chicago, Ill.

To the Publishers of American Fancier,

Gentlemen:—The Northern Berkshire Poultry Association, among other new features, has decided to have a space in show room set aside for the special use of poultry journals.

This space will be furnished with tables, and will be in charge of a competent man, who will have charge of distributing any sample copies or other advertising matter which the poultry journals care to furnish. If you see fit to print the enclosed item or one giving the facts as stated therein, we will be glad in return to extend to you the use of the necessary space to advertise your paper, and also furnish a man to see that the matter is properly distributed. If you wish to take advantage of this offer we will be pleased to receive whatever you care to send at an early date, so there will be no unnecessary delay.

Very respectfully yours,

C. M. OTTMAN,

Secretary Northern Berkshire Poultry Association, North Adams, Mass.

C. A. Moore, Greenwich Conn., of the firm of Manning, Maxwell & Moore, bought six hens at the Madison Square Garden Show for $30 each, and sent them to his farm at Round Hill. The birds were stolen from his place, and the sheriff, it is said, traced footprints to the home of John Volgose, a farmer, and there found six fowls newly killed and plucked. Volgose denied that he had stolen the birds, but the sheriff asked him what he fed the birds with, and his reply was, "corn," whereupon the sheriff took the crop out of one of the hens and showed that it was full of whole wheat. Volgose was arrested, and if he is convicted the sheriff will get a $50 reward which the State of Connecticut offers for the apprehension of a chicken thief.

Some Interesting Experiments on the Use of Grit for Fowls

(Written expressly for the American Fancier)

BY REV. C. E. PETERSEN

President American Houdan Club, 1906-1907

(Continued from December 15th issue.)

The ball was given to a turkey cock, and left eighteen hours in the stomach; at the expiration of which time that organ was opened, but nothing appeared except the naked ball, the twelve lancets having been broken to pieces.

"I discovered three in the large intestines, pointless and mixed with the other contents; the other nine were missing and had probably been voided. The stomach was as sound and entire as that which had received the needles.

"Two capons, of which one was subjected to the experiment with the needles, and the other with the lancets, sustained them equally as well.

"My next wish was to know how much time elapsed before the beginning of the fractures; and by repeated experiments on turkeys, I found that these sharp bodies begin to be broken and lose their shape in two hours. This at least happened in two individuals of the species:

"In one, four of the lancets, and in the other three of the needles were broken within that space of time; the others were blunted, but continued fixed in the balls."

We may not suppose from the above experiments that the stones in the gizzard had anything to do in the breaking up of these substances, for it was accomplished entirely by the powerful muscular action of the gizzard, which to fully substantiate Spallanzani went still farther with his experiments.

To ascertain this point, he took wood-pigeons the moment they escaped from the egg, and fed and nursed them himself until they were able to gather their own food; "they were then," he continues, "confined in a cage and supplied first with vetches soaked in warm water, and afterward in a dry and hard state. A month after they had begun to pick up their own food, hard bodies such as tin tubes, glass globules, and fragments of broken glass, were introduced with the food. Care was taken that each pigeon should swallow only one of these substances.

"In two days afterwards they were killed. Not one of the stomachs contained a single pebble; and yet the tubes were bruised and flattened, and the spherules and bits of glass blunted and broken.

"This happened alike to each body, nor did the smallest laceration appear on the coats of the stomach.

"I did not confine my observations to this one species. With the same object in view, I set under a turkey-hen several eggs, partly her own, and partly from a common hen. When the chickens were hatched I took charge of them myself, and employed the same precautions as I did with the wood-pigeons. They were confined for fifty-five days in separate cages, and their food consisted of various sorts of grain. The last day they had to live I introduced into their gizzards hard indigestible substances.

"Upon examination the stomachs were free from stones, yet the tin tubes, spherules of glass, and fragments of glass, were not on this account either the less or the more bruised or broken. Hence then," he adds, "we have at length a decision of the famous question concerning the use of these pebbles, so long agitated by authors.

"It appears that they are not at all necessary to the trituration of the firmest food, or the hardest foreign substances, contrary to the opinion of many anatomists and physiologists, as well ancient as modern; I will not, however, deny that when put in motion by the gastric muscles, they are capable of producing some effect on the contents of the stomach."

From these experiments Spallanzani finally concluded that the small stones swallowed by poultry was not swallowed to accomplish any purpose in the digestion of their food, but was swallowed simply from mere stupidity.

This argument was, however, firmly opposed at the time by Blumenbach, who stated that if no access could be had by the poultry to grit or small stones, they would as a consequence grow lean in flesh though copiously supplied with food.

The fact remains that this contested point has never been fully settled, and it would to my idea at least, be an experiment of much value if some poultry was fed for a year's time in our modern ways, one lot having free access to grit and shell, another lot being fed on whole grain, but without grit and shell, and again a third lot, on broken or what we call cracked grain, but without access to grit or shell.

If grit is a necessity to the mastication of the fowl's food, then they certainly have the advantage over animals having teeth, so far as grit of some kind is always easily obtained, while the teeth are not renewed.

Whatever Spallanzani proved and did not prove in these experiments, it is a fact, and a fact easily proven, that the fowls do not eat grit without any design, though we may not know fully the whole purpose of the use that grit is put to in the animal economy of the fowl, and I have sometimes thought that grit and other hard substances perhaps were eaten by the fowls to keep contents of the crop from packing, suffice it to say that in a number of crop-bound birds examined, grit seemed to be conspicuously absent, on the other hand, if grit may not be necessary to triturate the grain so that the gastric juices may complete the process of digestion, it may be that the grit is necessary to keep the inner surface of the gizzard in its hard, rough and horny state, same as the finest pair of hands by the handling of hard substances becomes hard and calous hence the form of speech, "horny hands."

This theory has, to my best knowledge, never been advanced by any of the numerous investigators on the subject, though it may only add another theory to the many others already advanced.

But then

"There are more things in heaven and earth, Horatio,
Than are dreamt of in your philosophy."

* * *

Mr. Leonard W. Lott & Co.,

Dear Sirs:—Enclosed please find $1, for which send the American Fancier one year to Harley Thompson, R. F. D., Granville, N. Y., and the other fifty cents keep for a year's subscription when mine expires. Wishing you and the American Fancier a merry Xmas, as the Fancier is deserving of many greetings as it is one of the best papers published today.

F. J. STATIA.

Granville, N. Y.

* * *

At the New York Madison Square Garden Show a club was formed by the breeders of the S. C. Brown Leghorns present, to be known as the S. C. Leghorn Club of America. W. H. Harrington was elected president, and Miss Sophia Pitchlynn, secretary. It was voted that the president select four vice-presidents, and an executive committee, which names should be presented at a meeting to be held at Boston, on Thursday of Boston Show week, at four p. m.

* * *

The January 15th issue will contain a report of the different classes at New York by those competent to critcise.

The Grit That's Sharp

Cuts up food in hen's gizzard so that it fits it for eggs and gives growth. It's sharp—keeps its edges until absorbed.

ORDER MAKA-SHEL GRIT

Hen's prefer it to gravel, glass or oyster shell. It contains Lime, Iron, Magnesium and other elements that are suited to the digestive processes and help stimulate egg-production through active assimilation. It's economical. Send 50c., coin or postage, for 100-lb. bag. Order now. New booklet, "Hen Dyspepsia," and big sample—free. EDGE HILL SILICA ROCK CO., Box I, New Brunswick, N. J.

INDIAN RUNNER DUCKS

NOW laying, are profitable to buy, if they are bred right. Ours are RIGHT. Satisfaction or money back proves it.

A few trios, $5.00

MALLARD DUCKS

the kind to weigh, the kind to pay. Rich in colors, right every way, a few trios, $5.00.

Eggs for Spring Delivery now booked; one sitting $1.00, fifty eggs, $4.00, 100 eggs, assorted if desired, $7.00. 25% down secures date for shipment of order.

MEADOWCREEK FARM

Pittsford, - - New York

Adjustable Leg Bands

10 for 10c; 50-45c; 100-75c. Sample for 2c stamp. Catalog Free.

HERE'S A PEN FOR CHICKS AND HEN

It's an ideal place for a hen to sit and raise her brood in a **Wigwarm Setting and Brood Coop.** Size 20x48 and 24 high. Keeps out rats, skunks, etc. Makes money, saves many chicks. Price $3. Move it anywhere. Write for Discounts and free catalog.

E. F. HODGSON, Box 54, Dover, Mass.

Interesting Facts about Pigeons

By A. E. Robst

THE age of a pigeon can be as long as fifteen years and has been known to exceed twenty. Ordinarily it seldom exceeds ten, as the trying time of the moult generally kills it at that age.

To tell a pigeon's age there are various ways and marks. It is easy to tell the age of a young bird. First, when it is say two weeks old, and the color of the feathers begins to show; four to five weeks old when it leaves its nest; three to four months old when it stops to squeak and begins to coo. The endings of the first change of feathers falls into the fifth month provided the bird is not hatched too late. After the ending of the first moult the birds begin to show their sex and the bill wattle begins to get white. This does not occur in younger birds, and usually the larger and whiter this wattle gets the older the bird. Real old birds show wrinkles all through it.

A Frenchman named Samin claims to have discovered the following method: Take any pigeon in your hand and spread either of its wings out flat like a fan, showing all of the twenty wing feathers. The first ten longest, or primary wing feathers, change with the moult yearly and grow back to about the same form and size. The next ten, or secondary flights, also moult, but grow shorter each year one at a time, beginning with the eleventh feather from the end of the wing, or else the first of the ten secondary feathers. Thus a bird one year old will show feather No. 11 about one-quarter of an inch shorter than the adjacent feathers, deviating that distance from a fairly even line of the entire wing. The second year No. 12 will grow proportionately shorter in a similar manner, followed by the others one each year. Thus a bird four years old should show No. 11, 12, 13 and 14 shorter than No. 10 or No. 15.

About this claim I will say that various birds proved this contention easily while in others it was difficult to verify it correctly. All the birds, of course, being banded to preclude false conclusions. At moulting time this would also be uncertain as several of the feathers may be missing at one time.

The best and most reliable way is to have your birds banded with an approved band. This will give you the correct age, a record, and will be at the same time a protection to the buyer.

Feather Color in Pigeons.

All pigeons, whether dark or light colored, have the characteristic metallic sheen on the head and neck, and sometimes the breast (in a few varieties it extends practically all over the body). All colors of the rainbow occur here, and William Browne wrote:

"That none can say, though he it strict attends;
Here one begins, and there another ends."

The principal colors are blue, white, black, yellow or red; all others are mere shades or mixtures.

Blue—The real original color of the wild pigeon-blue requires certain shades and markings; without these it rarely exists. In a blue-colored pigeon you will find the head and part of the neck blue-gray. Farther along the metallic lustre occurs, which gradually diminishes and finally disappears as it approaches the chest and back, a lighter blue tone showing for the body, getting lighter towards the tail, often going into white at the end of the back. The tail again is darker like the head with a black tail bar about one-half inch from the end, the end itself again blue. The wings and shoulders really are the only part that show the correct blue color.

Black—Genuine, ideal black can only be a deep velvety black with no visible tint of any other color. Particularly faulty is blue-black and any variation from a dark to a light black on various parts of the body. The reader will find various shades of black—blue, brown, slaty-gray, purple-violet and green-black. All these originate either from inbreeding or mating of different colored birds.

Yellow appears in various shades, from deep rusty-yellow to a pale almost creamy white.

Red, Reddy-brown, Copper-red to Red-gray—These colors are so closely related that no distinction should be made, and more attention should be given to breeding the birds with uniform shade all over. Variations in shade on one bird are more faulty than the color itself; deep colors, of course, are most desirable.

White—This color originates through the entire disappearance of the colored pigments; that is, clear white without any tint of whatever shade. Technically, white is colorless.

L. Schmidt writes that there are two whites in pigeons—Albino white or white of the first order with red or light iris, and Splash-white or white of the second order with brown iris. A white colored pigeon should be white, and no other color is ad-

3 Great Books FREE.

We have just succeeded in completing with a book publishing house one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the authors of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list we selected, after careful deliberation, the twelve novels which have been found to have proved most phenomenally popular. For interest-riveting mystery, daring adventure, love and thrilling romance no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, the AMERICAN HOME MAGAZINE. This big, new periodical has drawn upon all the almost unlimited resources of a great publishing organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, and screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvelous creations of those master minds of mirth and fun—Opper, Dirks, Bunny, Outcault, and all the rest. Of the magazine's great editorial writers only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvelous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new monthly. For the strange, the bizarre, the unlike, the fascinating, read the brilliantly interesting new AMERICAN HOME MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme.)
No. L37. The Love That Saved Him. (Mrs. Stephens.)
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No. 34. My Mother's Rival. (Braeme.)
No. 6. Lany Gwendolin's Dream. (Braeme.)
No. 26. The Bride of an Hour. (Stephens.)
No. 16. Beauty's Marriage. (Braeme.)
No. 35. Farmer Holt's Daughter. (Garvice.)
No. 25. A Maiden All Forlorn. (Duchess.)

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—AMERICAN HOME MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE, Order all three books BY NUMBER and address at once.

Taylor Bros., Dept. H, Camden, N. J.

The great New York Show, Madison Square Garden, is now a thing of the past.

* * *

The Hall, the largest and finest in America, was very handsomely decorated with flags and colored bunting. The Pigeons were caged by Spratts on the right balcony. Over 1,700 single entries was most pleasing to the management, and then when one considers at $1 per bird, it was a grand turnout.

* * *

The list of specialty clubs holding their annual meeting in connection with this exhibition and offering the grand list of specials had a most excellent effect, bringing out as it did, the finest collection of pigeons yet seen in this country.

* * *

How many fanciers one meets at New York from far and near. It seems as though every pigeon crank arrives in New York during the great exhibition.

* * *

The penning and management were simply perfect. We believe only one bird lost in reshipping this great collection home, which speaks well for the handling.

* * *

Secretary H. V. Crawford was at the wheel from early Tuesday morning until late Saturday night. But, strange to relate, although a pigeon fancier of many years, Mr. Crawford was seen very little in the pigeon section.

* * *

The quality throughout was grand, nearly every variety shows improvement. The pigeon fancy is obtaining a firm foothold in America. That American birds today can hold their own in any company is an assured fact.

* * *

To mention all we saw at Madison Square Garden would fill too much space.

* * *

In groups of three or four, scattered about the balcony, could be seen prominent fanciers discussing the merits of different birds. Carrier fanciers always near their section, Dragoon enthusiasts in Dragoon Alley, and so on.

* * *

How many new names appear in the catalogue, those we have never heard of before, but mentioned in the list of prize winners, and some carrying off the premier honors. This shows the healthy state of the pigeon fancy is in today.

* * *

We have heard very few complaints regarding the judging, which is remarkable for a show the size and quality of New York, where a win is of such importance.

* * *

Nearly all the judging was completed Tuesday evening, with the exception of special awards, etc.

* * *

Pouters 8 being on exhibition at New York. But the club will meet at Chicago that accounts for their absence. Just think a few years ago one of the attractions of the show to get in such a shape.

* * *

Pigmies also suffered a falling off from last year, Messrs. Geo. Josenhaus and Dr. L. H. Jones being the principal exhibitors. The club will meet at Boston in January, and we trust Mr. A. E. Smith will be the means of bringing out a large display.

* * *

Dragoons showed the way, being the banner class of the show, over 300 being entered in the single classes. This is certainly a grand display of this popular variety.

* * *

Carriers showed improvement in both quality and quantity and was handled by that popular Wester pigeon fancier, judge and editor, Mr. Geo. Ewald.

* * *

Jacobins were judged by Alex Ingram. They have always been a most remarkable lot, and this year was no exception. The Jaocbin has made wonderful strides toward perfection during the last few years. Today they are a more symetrical bird, showing more top feathers, and also greater length.

* * *

Magpies were a disappointment, only two exhibitors taking part—Mr. Ehinger and Geo. E. Rowland.

Oriental Frills brought together about the usual number; the quality was fine.

Helmets, although not the club meet, brought out some grand birds. Mr Ewald placed the awards. Mr. Robst's good work has given life to a new variety in this country.

* * *

On page 18 of the premium list, the fourth paragraph from top of page should read:

Four or more entries, First Prize, $2.50. Second Prize, $1.00. V. H. C. H. C. and C.

Turbits at New York

TURBITS mustered only sixty-four but the quality was the grandest ever seen in this country, from the fact that all the noted winners at Crystal Palace were on view, as the result of the return to the Fancy of Mr. Harry W. Orr, of Reading, Pa., who up to about ten years ago was one of the foremost breeders and exhibitors of this grand variety. I am very sorry that I cannot follow the awards in some instances, and herewith give you my critique.

Black Cocks seven—1st and 2d W. Harry Orr; the winner, Champion Punch. Grand style and shape; fair color, nice Turbit all through; should be stouter in upper mandible; not of the best modern type. 2d—1st Palace 1905 and 1st Palace 1906. Mr. Widger winner. Immense nose and width in front. Wonderful mandibles, cornery, lacks Gullet. Good color, fair shape and beak, weak mane. Most useful bird for breeding. 3d—E. B. Ullrich. Grand frontal in beak. Rather coarse in cere. Foul thigh, beautiful mane and beak, nice sweep. Some preferred for 2d. 4th—A. F. Hinterlieter. Good shape and color, lacks substance of winners, a bit flat on top. Beautiful mane and beak. Inclined to be cornery.

Black Hens six—1st and 2d, Orr. The former the noted Snowdrop, 1st at Palace, 1906. A grandly finished Turbit all over. Stout nose and beak. Good eye. The latter the Brownhill Black 3d at Palace 1906. I much preferred a large skull and more sweep. Very modern. 3d—Geo. B. Hart. Should have been 4th. Nice shape, fair color, not the type of the former. 4th—Ullrich. A Dun. Nicely finished all through, on modern lines. Well filled in front. Only wants larger skull. Beautiful mane and beak. Large, bulging eye.

Black or Dun bred 1907 nine—1st and three Specials. L. F. Carson. A nice one all through. On modern lines but not enough of them. Fair color, shows bars. Entirely too small. 2d—T. J. McIntyre. A nice one. Losers to winners on type and substance. Clean underneath. Good color and condition. 3d—Hart. A mistake. Horrible weak mandibles, but full in front. Poor condition. 4th—Ullrich. A Dun. Short stout beak, grand nose and sweep. On modern lines. Needs more Gullet. Fails in width. Clean underneath.

Blue Cocks eight—1st, Carson. A big mistake. Too short in skull. Nice mane and beak. Good shape and color. Rather coarse. 2d—Henterlieter. Too coarse. Weak mandibles. Grand skull and frontal. Nice color. Droops flights. 3d and 4th, again Carson. Very similar and two nice ones. I preferred latter for 2d place. Nice fitting noses. Grand mandibles. Excellent sweep, on modern lines.

Pen No. 3943—Orr. A Ticked Blue. By far the grandest bird in the show. Simply marvelous all over. The headpiece, nose, wattle and texture cannot possibly be improved. Most wonderful sweep with perfectly filled wide front. Another recent importation from Jensen. Never exhibited in England. At least five years ahead. A truly wonderful modern piece of work.

Pen No. 3941—Orr. The Champness Winning Palace Cock. Should have been 4th. Fails in cheeks and sweep.

Hens ten—1st and 2d Orr. The former the noted winning Champness 1906 Blue. Winner of the Cup at Palace. A very taking Turbit. Could be improved with more shape. Grand nose and beak. Splendid eyes and markings. 2d—Another Champness bird. 1st at Palace Adult Class 1906. Very similar to 1st. Fails to win in substance and beak. Inclined to be shelly. 3d—Carson. Another good one, only should be more of her. Good color and shape, slightly stained beak. 4th—Carson. Very similar, better in frontal, but fails in substance.

Pen No. 3952—Orr. My choice for 1st. Of the correct modern type. Grand style, beautiful color and grand shape. Large bulging eyes. Nice texture of nose. In proper shape of waddle. The more I look at her the more I like her. Another recent importation from Mr. Jensen. Never shown before.

Pen 3947—Carson. Another good one. Probably would have been 3d but unfortunately she escaped from her pen and was caught after judging was completed.

Bred 1907 five—1st and 2d Carson. 1st and 3d very typical and similar. Preferred 2d. Better color and shape and also my choice for best Youngster. 2d has bad cere, cornery and lacks shape. Should have been 4th. 4th—Hart. Should have been 3d. Very smooth. Nice width and shape. Ideal symmetry. Beautiful mane and beak.

Red Cocks three—1st, 2d and 3d, all Orr. Again a bunch of noted winners. 1st Jensen. The Jensen-Jones Challenge Trophy winner at Palace 1905. Not in best of condition but a grand one all through. Could be better in lower mandibles. 2d—The Stephenson winning Red at Palace. Another one on modern lines. Good color, nice shape. A bit large. 3d—Stent. Nicer in beak, being shorter and colser fitting. Rather toyish.

Hens three—1st, 2d and 3d, again to Orr. 1st and 2d the noted Stent winners, the former enormous width and good color. Horrible beak. Lacks shape. Too owly. 2d I preferred but of course loses today on account of poor condition. 3d the Stephenson winning Palace 1906 Red. More modern. Needs more width. Beautiful style and color. Grand shape.

The Other Cocks two—1st and 2d, Orr. The former is the Champness winner at Palace Adult Class 1906. Grand deep color. Too large. Very foul underneath. Big wide skull. Too large in body. 2d the Duf winner 1906 class at Palace. More on modern lines. Grand shape. Fails in setting of beak. Good color and finish.

Yellow Hens two—1st and 2d, Orr. The 2d I much preferred. Truly a modern one. Another Jensen bird. Good nose and beak setting. Nice shape. A little long in the neck. Fair color. The winner has better color and wider head, but fails in beak setting and shape.

"A. O. C."—1st, Carson. Poor colored blue. In wrong class. Very typical and modern.

Any Other Color Hens—1st, Ullrich. A cream. A good one. Well set stout beak. Grand shape and finish. On modern lines.

Any Other Color Bred 1907—1st and 2d, Ullrich. Very similar. The former a Roan. A little beauty. Good shape and style. Wants more substance. 2d a cream. 3d, McIntyre, a blue Check.

E. B. ULRICH.

New York Show

BY JOS. GAVIN

After an absence of five years we decided to spend a few days around the show pens at Madison Square Garden. We found the New York of 1907 much the same as the many we had attended annually, previous to 1902, when we were looked on as a fixture in the list of judges. Things seemed to be much the same in the pigeon department, though we missed many of the old, familiar faces to be seen at the Garden a decade since.

Mr. Crawford, secretary, and Capt. Griffing, treasurer, both seem to hold their own and carry out their arduous task in the usual easy-going style which has gained the confidence of the exhibitors who make this the par excellence show of the year. Everybody seems to agree that the Garden is the one superior exhibition hall of all others in the United States, and some how the surroundings seem to impart an air of superiority to the exhibits. Things always seem to look a bit better to me in New York than elsewhere, whether it be poultry, pigeons or pet stock, and there is no doubt the fortunate winners at the Garden show hold a higher position in the estimation of their owners.

The pigeon department opened up with Class 473 for Pouters. What a sorry display of the king-o'-doves the breeders of this grand variety set down for 1907 at the most important exhibition in America—eight birds in six classes. In the last issue of the AMERICAN FANCIER we read "The Pouter Club is convalescent; it was never dead, but very low." We trust something will come to the rescue ere long and impart a wave of enthusiasm to the breeders of this high class and popular variety. If members of specialty clubs think the best policy is only to support the club show and let all others go to the ———, then the sooner they disband the better for the fancy and the variety they control. We are well known to the bad losers in the ranks of the Pouter fancy in past years, but had hopes that much of this feeling had become extinct. If it is necessary for Eastern breeders to hold back the full representation of their lofts in order to be represented at the Pouter Club meet in a Western city, then we say by all means let us have a Pouter Club which is representative of the Eastern states and banded together for the sole purpose of supporting all the best Eastern exhibitions—never forgetting that the Madison Square show should be well supported by a good display of the best of every breeder's lofts. It was hinted at the Garden that Pouters are to be dumped into the "Any Other Variety" classes next year, so we say, for heaven's sake get a move on and prevent any such decision on the part of the New York management.

Pigmy Pouters were hardly representative of the best lofts of this fancy for much the same reason—I presume on account of the club meet to be held at Boston. Fanciers must be breeding on very close limits these days when their lofts contain only enough to give them a look-in at one exhibition in a season.

Only three classes in a total of thirty-one had five entries, yet it was not so long since we noted that there were to be additional classes for this variety at the Garden. Why bother the Association for such extended classification if you have no intention of *filling same annually.* Mr. A. E. Smith, president of the Pigmy Pouter Club, who placed the awards (and did his work well) must have felt that the breeders had hardly conferred much honor to his appointment by putting down such a meagre display. With the appointment of a specialty judge and such an extensive classification, the Pigmy Pouter breeders are deserving of something other than an oyster-wash from New York in future.

Fantails were a grand lot, and let me say to some of the stay-at-homes that you will be lucky not to meet a good part of this bunch at Boston and Chi-

cago. I am sure the New York winners would create quite a disturbance in the ranks of the prospective aspirants for the leading honor at the two coming meets, were they to decide to take a trip East or West. Messrs Havemeyer Bros. put down a grand team of all colors and must say that "Jimmy" Glasgow has the knack of knowing how to make them look their best. Such tails as some of the birds carried left nothing to be desired and needed nothing artificial to keep them in proper shape the whole week. No strings we reported on weak centres as were noted on some Western exhibits which competed at Louisville in '98. Jimmy Blair's young white hen and the young blacks and blues shown by our old-time friend "Sandy" Hays (who has his bit of hard luck at all times) were well deserving the honor conferred on them.

Carriers, one hundred and fifty-nine, the finest display it has ever been my pleasure to look over. The black and dun classes were particularly strong in quality, and must have caused Judge George Ewald considerable thinking. The whites came out in strong force, and were undoubtedly the finest string of whites ever penned in Madison Square Garden. Rudolph Sweisfurth, the energetic secretary of the Carrier Club, has done well to keep this variety at the top notch of popularity, year after year. We can well remember the time when a dozen or so Carriers was considered a good showing.

Jacobins, two hundred and ten, well smothered in feather, at least you would think some of them would smother, with the enormous hood and chain some of these birds display. The young black hen shown by L. W. Hyde, Jr., was certainly remarkable for hood and depth of chain. We should prefer to see the color extend back of the thighs which to my thinking gives the bird a more finished appearance. I like the spirit of exhibiting displayed by the Jacobin breeders, quite a few entering three and four birds in each class. If more of our breeders displayed a bit of this ambition to take the whole string of ribbons there would not be much talk of classes not filling. The Jacobin Club, the oldest specialty club in America, seems to be a fixture with Secretary Crawford's show, the latter being one of the first members of the club, and previous to his taking the reins of the Garden meet, was able to put down a string hard for any to beat.

Tumblers, short face, seem to be rapidly losing ground. The recent exhibits were far from being of the same quality as those handled by the writer in judging previous Garden shows. Long face, clean leg Tumblers came out fairly strong in numbers and of excellent quality. Some of the Black Mottles were pretty warm company, and make some good birds stand back wherever they compete. White Selfs were another lot brim full of quality, well filled class. Muffed Tumblers, the same old story for a Garden show—few in numbers. Red and Yellow Selfs were best represented and noted some good type birds penned.

Oriental Frills were a good lot, though a bit shy in numbers. The quality keeps fairly strong; the winners mostly good in head properties, and well laced. A few of the black laced Blondinettes we thought might have changed places with the more distinct laced birds. When a bird of this variety has become so light in color as to lose all of lacing on flights and tail feathers, it is hardly up to our idea of a good laced specimen and without lacing is past showing, regardless of quality elsewhere.

Turbits were the best lot we have seen in a long while. The recent importations of W. Harry Orr contained some remarkably good specimens of the Turbit fancy. Messrs Hinterleiter, Ulrich, Carson and Meyer also showed some good birds and it is to be hoped that none of the latter will get cold feet and resort to breeding some other variety. They will undoubtedly find the going a bit hard in some of the colors against the new comers, but time will probably distribute a few in other lofts. "Harry" has been in the fancy before and had the best to be got.

Magpies—A few good ones, but hardly as strong as we would have wished at New York. Billy Elmiger got away with the lion's share of the blue ribbons.

Dragoons, three hundred and nineteen strong. What an army! Talk about light-horsemen, truly, this lot would, in a pitched battle, I am sure, drive all the other varieties of the pigeon family out of the Garden in short time.

When Mr. F. H. Wright took hold of the Dragoon Club there was no such displays as this to be seen at New York or elsewhere on this continent, and we regret to know that Mr. Wright has resigned the secretaryship to another, who we trust will be able to continue to keep the Dragoon exhibit as the strongest of all varieties of the Columbian family.

What a puzzle Mr. Oliphant must have thought he was up against when he started judging. Just think of a class of twenty-five blue cocks with only four ribbons to pass out—you see a blue ribbon hanging in one pen and the bird in the next pen *without a smell,* but you look and look for a long time and try hard to discern the difference in the two occupants—such is luck, and we can't be all winners. If anyone don't think the judge did a good job let him undertake the same task. We don't remember in our long experience in the fancy of another equally arduous task, and we trust the same display will come together again at some future show—try Philadelphia.

Owls (English) seem to be going back. The poorest lot we remember seeing at this show.

The African Owls were a much better lot, and the quality of some of the Whites and the Blacks were excellent—though we are, as ever in the past, wishing they could be a wee bit smaller in some instances. The judge did not seem to draw the line of distinction, but took his entries as they were placed in the book—some of the winners should have been passed as too large. One of these (pen 4368) we consider would make an excellent mate for an English hen, and we would look for a better type of young than any of the present exhibit of the larger variety.

Tailed Owls were few, but good, and

(Continued on Page 14.)

Satisfaction guaranteed. Mrs. Wm. B. Holmes, Bridgeton, N. J.

(Continued from Page 11.)

it was a surprise to me to note that there were so few on exhibition. I often wonder what becomes of all the fine stock imported to this country—they are certainly worthy of more careful attention from fanciers of beauty.

Whiskered Owls, much the same. The extensive frilling of this variety always seemed to detract from the otherwise neat pigeon.

Archangels—Three well-filled classes, and we were pleased to note the excellent quality of the whole exhibit. There seems to be quite a few interested in this most beautiful of all the toy varieties, and we would suggest to Mr. Wright that he do for the Archangel what he has done for the Dragoon.

Trumpeters—Nine birds in three classes, all of the best quality—not a poor one in the lot. Mr. Moore certainly seems to have the upper hand in the Trumpeter fancy, and need not fear any future importations. The size of rose and crest on the Altoona exhibits leaves nothing to be desired.

Show Homers seem to have gone back at a rapid pace, and the Garden display was a sorry disappointment to what we expected in this variety. Can't say that the classes were well handled, one reason, no doubt, for the lack of enthusiasm in showing.

Exhibition Flying Homers were a good lot and competition close. The new type seems to have gained a good footing, and if the judges handle the variety intelligently and stick to present style of straight face and short bodied birds, then this will be a most typical pigeon and pleasing to the eye of most lovers of pigeons.

German Toys seem to have gone out of existence, if we except the small display of Helmets. What has become of all the Swallows and Nun breeders?

The many varieties of the Rensh family now being used in the squab production were out in good numbers, and there seems to be a lot of business being done in these newcomers. Last winter while attending the Philadelphia show we were surprised to hear such fanciers as Hoskins, of Jacobin fame, and Walton, for many seasons one of the leading Muffed Tumbler exhibitors, talking of starting a club for the Hen pigeon. They seem to have got the fever good and plenty, and expect ere long to see some exhibits from these famous breeders.

It is a long time since we contributed anything to the columns of the fancy press, and now our many friends must excuse out lack of criticism on the placing of awards in some instances at the Garden show, for it was packing time before we received the invitation to do this bit for the AMERICAN FANCIER. As we are down to do a share of the judging at Philadelphia, January 21st, 1908, we hope to give you a better story in the near future. Carriers, Dragoons and Tumblers seem to be the varieties allotted to us and we hope they come out good and plenty.

Fantails at New York

WHITE Cocks, eight in class. 1st, Havemeyer Bros.; one of the best cocks going, although four years old, still small; low on legs and carries a grand tail; a beauty. This bird had the honor of winning special for the best bird in the show, but whether or not the prize will go to the owner is the question before the American Pigeon Club. It appears Messrs. Havemeyer Bros. are not members of the club. 2d and 3d, Dr. Howland. Two grand fantails, but must give way to the winner. 4th, Alex Hay. A true Hay type, small, but lacks finish of those above.

Hens—1st, Havemeyer Bros., in a class of 12. Small, well rolled up, carries grand tail; a great hen. 2d, Dr. Fred C. Peterson. Last year's winning hen; very small, sweet hen; very low on legs; easy action; fine tail; not quite ready; not much to choose between 1st and 2d; many might place 2d first without any trouble. 3d, Dr. Howland. Another fine hen, but outclassed in this competition. 4th, N. M. Shaw. A real, typical fantail; very small, well rolled up; good action; a grand hen.

Cocks bred 1907—1st and the Dr. Fred'k C. Peterson Cup. Good body, plenty of action; carries a fine tail; just right on legs; a great cock. 2d, Havemeyer Bros. Typical fantail; a trifle large, but carries a fine tail; well rolled up; loses in leg to the winner. 3d, Hay. Very small for a cock; good body, but not in the best of condition. 4th, N. M. Shaw, again showing a fine fantail; plenty of style and action; good tail but not quite the finish of the winners. 17 cocks were shown in this class.

Hens bred 1907—18 in class. 1st and $150 Challenge Bowl for best white bred 1907, Jas Blair, one of the best bodied fantails in the show; very small; fine, full chest; very low on legs; the correct type; only fault we could find, tail might have been stronger and a little tighter in feather. 2d, Havemeyer Bros. A grand hen, but much larger than winner, and higher on legs than we like. 3d, Hay. Very small; good style and action, and carries good tail; condition could have been better. 4th, Dr. Fred C. Peterson. A good hen; plenty of action in pen; full chest; a trifle high on legs; loose on tail.

Reds and Yellows brought out two remarkable birds. 1st youngster, a red; very small, round body; low on legs; carries a fine tail; the best red we have ever seen. 2d youngster, a great yellow cock; grand style and action; plenty of tail; a great pair. Both belonged to Havemeyer Bros.

Blacks—In cocks Mr. Geo. E. Rowland won very easily with an imported bird; grand style and action; fine tail. Havemeyer was 1st Hens also 1st youngsters, with two elegant birds; very small, plenty of style and action; pen 3264, owned by Havemeyer. 1907 black cock was a beautiful bird, but sulked in pen; fine color and body; grand tail. 2d, 3d and 4th in this class all belonged to Alex Hay, with another celebrated Hay team of blacks; very small, round bodies; grand style and action; a hot class. The awards could have been changed by another judge.

Blues—1st cock, H. A. Johnson, a new competitor at Madison Square Garden. Good bodied bird; plenty of style and action; good tail; hardly through the moult.

Youngsters—Hay showed a very sweet, small hen; always in position; fine tail; easily won the class.

Saddles brought together great quality, Havemeyer Bros. winning both old classes with birds purchased from Jos. Blair last season.

In youngsters Blair captured 1st, 2d and 3d, also the Rowland Challenge Cup for the best saddle in the show, with a grand team. 1st, a very small hen, beautiful body, head always on cushion; fine tail; one of the best saddles we have yet seen. 2d, red cock; very small; plenty of action; fine body; a trifle loose in feather, otherwise hard to find fault with. 3d, a little larger, but on the same type. Any other color 1st 1907 bred, Blair. Very small checker. 2d, Hay. Very typical; splash mostly black; always in position; fine fantail.

The Novice Medal for the best white shown by one who has never won a first in the White classes was won by Dr. Fred'k C. Peterson's 2d hen in the old class.

The Novice Medal for the best colored bird shown by one who has never won a first in the colored classes was awarded H. A. Johnson's 3d Saddleback cock.

(Continued from Page 9.)

missable. Frequently tints of silver gray or yellow appear; these should be eliminated.

In addition to the above there are, of course, a great number of intermediate or mixed colors, sometimes very pleasing, depending largely on the predominant color of the parent bird.

The Barb

Address by Mr. J. T. Saunders before the National Peristeronic Society of England

MR. JOHN MOORE mentions in his book of pigeons, published about the year 1735, this pigeon is in size somewhat larger than a Jacobin; it is called a Barb for shortness instead of the Barbary pigeon, being originally brought from that country. (This reference as to size you will, perhaps, agree with me is rather vague, for most of you know that today there is the large and the small Jacobin, so I will again refer to this later on.) He also says: It has a very short beak like a Bull-finch with a very small wattle, and a naked circle of tuberous red flesh round the eyes (whose irides are of a pearl color), the broader and redder this flesh is the more the bird is valued, though it is very narrow when the bird is young, and does not come to its full growth till they are four years old.

He also mentions that some of them have a tuft of feathers on the hinder part of the head, somewhat like a Finnikin, and others not. (To this I must say that I bred one such a specimen about seventeen years ago, but have not since seen any.)

Mr. Moore says that Mr. Willoughby in his description of this bird is guilty of a very great mistake in imagining the tuberous flesh to be white in some birds of this kind, which it never is, though it will grow paler when the bird is sick; but when it recovers always reassumes its wonted redness.

I regret that I cannot reaffirm this last phrase, for the eye wattles of a bird that has been sick, or out of sorts, seldom resumes that bright redness which they originally possesed.

Mr. J. C. Lyell says, in his book of fancy pigeons, that Shakespeare's reference to the Barbary pigeon makes it the earliest noticed variety that he knows of in our literature. As Willoughby gives a recognizable description of the Barb under the same name (Barbary pigeon) within a hundred years of Shakespeare's allusion to it, there can be no reasonable doubt this breed has been cultivated for at least three centuries in our country.

He also says that it was owing to some importations of Barbs from the South of France, made by Messrs. John Baily and Son about thirty years ago (this would mean about fifty years from now) this pigeon exists in our country in its present excellence. Its French name is the Polish Pigeon (Pigeon Polonais). It is certain that the Barbs which came from the South of France were far superior to what were here previously; and though the name of this bird in French is Pigeon Polonais, it may have another in the South. It is evidently an ancient variety, and more nearly allied to the highest type of the Owl tribe than any other. Both may be from the same stem, and both may have existed from pre-historic times.

First of all I will deal with the size, for it is clear to me that for many years there has been a difference of opinion regarding this.

(Continued January 15th issue.)

Egg Getting

depends largely on the skill of the feeder. The hen is a machine for converting a part of the food she eats into eggs. The machine must have the right ingredients. The finest pullet in the world cannot lay eggs unless she is fed egg-making materials.

Darling's Laying Food

Solves the Winter Egg Problem

It supplies all the necessary ingredients in the right proportion. Hundreds of the most prosperous poultrymen of the country have proved this. We are supplying these people with their winter laying feed year after year. You will be a permanent user if you try it. Quality always dependable, it never varies.

In 100-lb. Sacks, Price $2.00
f. o. b. Chicago or New York

Darling's	Scratching Food	$2.00	Darling's	Beef Scraps	$2.75
Darling's	Forcing Food	2.00	Darling's	Chick Feed	2.50
Darling's	Mica Crystal Grit	.65	Darling's	Oyster Shells	.60

All in 100-lb. Sacks, f. o. b. Chicago or New York. Cash with order.

Would you like some pointers on the egg business? Let us send you our booklet, "Fill the Egg Basket." We mail it free, also catalog of full line of feeds and up-to-date supplies. Address

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

SEND FOR PRICE LISTS AND SAMPLE
408 WEST 23rd STREET, NEW YORK CITY

$200.00 IN SIX MONTHS FROM 20 HENS.

To the average poultryman that would seem impossible, and when we tell you that we have actually done a $500.00 poultry business with 20 hens on a corner in the city garden 30 feet wide by 40 feet long we are simply stating facts.

It would not be possible to get such returns by any of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.

THE PHILO SYSTEM IS UNLIKE ALL OTHER WAYS OF KEEPING POULTRY

The New System Covers All Branches of the Work Necessary for Success,

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and a hammer can do the work.

Our Six Months Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month.

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING gives full particulars regarding these wonderful discoveries with simple, easy to understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

It also tells how to make a brooder for 25 cents that will automatically keep all lice off the chickens, or kill any that may be on them when put in the brooder.

Don't Let the Chickens Die in the Shell.

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 cents a Bushel.

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as to keep a cow without hay or fodder.

Our New Brooder Saves 2 cents on Each Chicken.

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

and in many respects is just the reverse accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing here, three cents per pound above the highest market price.

Three pound White Orpington roasters 10 weeks old, raised by the Philo System. Note the large well developed feet and legs, and the width of the pullet showing the front view.

VALLEY FALLS, N. Y., Sept. 5, 1907.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Poultry Keeping, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing," they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

(REV.) W. W. COX.

Your system of poultry keeping should appeal to all poultrymen. The advantages of your system are many, and the quality of the large flock of poultry you have raised on your city lot is the best evidence of its success.

Binghamton, N. Y. GEO. L. HARDING.

ABINGTON, MASS., NOV. 15, 1907.

The Philo System Book received to-day. It is beyond doubt the best thing of its kind that I have ever seen. There are one or two single items that I consider worth the full price of the book. I will begin to-morrow to remodel my plant to follow the lines laid down in your book as nearly as possible, and next fall I hope to have the business reduced to your exact methods to keep a flock of about 150 fowls.

M. R. BOND.

JACOBS CREEK, PA., NOV. 25, 1907.

I received the Philo System Book mailed to my home address, Beechtree, Pa. I am highly pleased with it, and am anxious to spread the good news as far as I can. I am a preacher of the Gospel engaged by the Baptist Ass'n to do Evangelistic work. I am on the road all the time, have about fourteen days in each town. I am very much interested in the hen and will do all I can to help the other fellow to know HOW, and to spread the good tidings received in the Philo System.

(REV.) F. B. WILLIAMS.

Special Introduction Offer.

By special arrangement we are able to give for only $1.00, the book with the right to use all patents.
One year's subscription to Poultry Review—A monthly paper for utility breeders.
One year's subscription to The American Fancier—Published Semi-Monthly.
Upon receipt of $1.00 you will get the book by return mail and your subscription will start at once.
This offer is to old subscribers as well as new and gives them a chance of extending their subscription for one year.
Copy of the Philo System book and a year's subscription to Poultry Review and The American Fancier all for $1.00.

THE 200-EGG HEN

is a reality. New methods have practically revolutionized the Egg business. A book has just been published giving full particulars and information which tells how to

INCREASE YOUR EGG PRODUCTION

It contains over 125 pages and over 40 photographic illustrations. The most valuable and instructive book of the kind ever published. The chapters include: Feeding for Winter Eggs: Regulating the Moult; The Forced Moult; The 200-Egg Hen; Rhode Island Egg Farming; Marketing Eggs to Secure Best Prices; A New Method of Advertising Eggs for Sale; Selecting the Stock; Hatching and Rearing Layers; Care of Future Layers; Houses for Laying Hens; Use of the Trap-Nest; Preserving Eggs to Keep Until the Price Goes Up. This book will greatly increase the Egg profits. It contains new methods of housing which will increase production of your Fowls. It explains a way of feeding that will produce more eggs in Winter from the same Hens. It tells how to make your Fowls moult when you want them to.

....Poultry Houses, Coops and Equipments....

The latest and most practical and best book on the subject. This book contains the newest plans for building practical and up-to-date poultry houses with description of coops, fixtures, and poultry utensils for the farm or city poultry keeper. It contains 93 illustrations and 96 pages. Most of the houses described are simple, easy and cheap to build.

Some Diseases of Chicks

By A. G. Halpin.
Michigan State Agricultural College

Gapes.

This is probably one of the most serious causes of loss among chicks. It is caused by a small worm that accumulates in the windpipe until the chicks suffocate. The affected chicks constantly try to dislodge the worms by gaping and shaking the head. If the chick is quite large it can usually manage to throw off the disease. If, however, the disease attacks small chicks, they usually succumb to it, or become stunted.

There are several ways of treating gapes, but in all cases the first thing to do is to separate the unaffected ones from the rest and move them to fresh ground as the disease spreads rapidly if this precaution is not taken. The common earth worm is said to be a means of spreading the disease as it is very frequently found to be a host for gape worms. If there is danger of gapes, use solid floors in all the coops and keep the chicks confined when there are many earth worms on the surface.

Several patent devices for the treatment of gapes are on the market; some of them are very good for the purpose while others are of doubtful value. If the chicks are considered worth the trouble, the quill and turpentine treatment is probably about the best, and is used as follows: Dip a quill in turpentine and then insert it gently into the wind pipe. The quill must of course enter the wind pipe in order to effect any cure. The operator will see the opening of the wind pipe at the base of the throat. Numerous complaints are made that the treatment does no good because people frequently insert the quill into the gullet instead of the wind pipe.

A looped horse hair may also be used for dislodging the gape worm. Insert it into the wind pipe; give it three or four turns and then remove, after which the chick will cough up any worms that have been dislodged.

Gape worms may be killed by placing the chicks in a closed barrel or some other convenient receptacle and forced to inhale strong tobacco fumes, or those of a similar nature. This method is not recommended very highly, as it is extremely dangerous. The treatment will of course kill the chicks if continued too long and thus an inexperienced operator finds it difficult to use.

In combating this disease, as well as all others, healthy, growing chicks are much more likely to overcome the trouble than weak, neglected ones.

Diarrhoea.

Another common disease of chicks is diarrhoea; they are affected with both the white and black forms of this trouble. A lack of heat and an excess of the same are prolific causes of diarrhoea in small chicks, but sometimes improper feeding is the cause. Too much heating food, as corn meal, sloppy or decaying food, or in fact anything that may cause a derangement of the digestive tract is likely to produce this trouble. Chicks properly hatched from strong, vigorous stock are much more likely to resist the disease, as their organs of digestion are stronger.

Leg Weakness and Crooked Breasts.

This trouble is especially prevalent when chicks are brooded indoors during the cold months. It is often caused by improper feeding. The chicks when thus affected are not getting a proper amount of bone and muscle-forming material and the ration is particularly lack in ash. This must be supplied in some form to make it palatable. The best way of doing this, so far as known to the writer, is to add fine ground bone either raw or cooked, animal meal, and milk in some form. Milk has been found especially good in supplying this lack of ash in poultry supplies. Feed a mixture of grains as recommended heretofore, and add fine ground bone, animal meal, milk, vegetables, clover or alfalfa, and furnish a plentiful supply of good, clean sand or grit. In some cases the ration may have been right and the chicks suffered from a lack of exercise. Without sufficient exercise there will not be a normal development of the digestive organs, bones and muscles. A good, clean range out-of-doors will usually correct this trouble, although if they have started to get crooked breast bones they never can be cured. Crooked breasts are occasionally caused by chicks roosting too early in life, but the trouble is generally caused by improper handling in the early development. Brooder chicks at two weeks of age are sometimes crooked breasted, the result of improper feeding and lack of exercise. Correct the ration as suggested for leg weakness. The digestive organs in birds thus affected are found to be out of proportion to their body weight. This development is probably due to the chick eating too much food, lacking in ash, in the attempt to secure the mineral elements which should be fed in a more concentrated form.

If the chicks are not taking enough exercise and a range is impossible on account of severe weather or other conditions, increase the amount of litter and force the youngsters to spend more time scratching for their food, but do not make the mistake of requiring them to work too much at first, as a chick with muscles and bones already weak, must be built up gradually. Frequently the attendant discovers that a brood of indoor chicks are getting weak. He is, perhaps, feeding a good supply of green bone and other bone-forming material. He desires, therefore, to make them take more exercise. With this in view he doubles the amount of litter and decreases the food, with the result that the chick in the attempt to satisfy its hunger, works too hard for its bodily strength and fails entirely. Frequently leg weakness is accompanied by constipation, which is relieved by the addition of green food and an increased amount of exercise.

Lice and Mites.

Other foes of little chicks are external parasites, lice and mites. We frequently find lice even among winter brooder chicks. Lice on the head are most troublesome. They fasten themselves to the back of the chick's head, near the base of the brain and gradually kill the chick. It is a pitiful sight to see the little chicks scratching the back of its head trying to dislodge this pest. Good results are usually obtained by greasing the head of each chick with 5 per cent. carbolated vaseline. Kerosene and lard, equal parts, prove equally effective. The chicks can be rapidly treated and should be attended to as soon as there is any suspicion of head lice. The louse may be seen readily by means of a small magnifying glass. It can also be detected with the naked eye if one is very careful to examine the right place, although one must look carefully to see it.

To kill mites, clean all coops and brooders perfectly, then apply thoroughly, either white wash, kerosene oil, or some of the prepared insecticides. Be sure to fill all the cracks and crevices as these are the places where mites will be found hiding during the day. Burn all the litter and add new. A spray pump may be used for applying the insecticide, as it drives the liquid into the cracks and crevices better than can be done with a brush. Whitewash can be applied with a pump and then smoothed over with a brush, doing rapid and effective work. Mites differ from body lice in that they suck the blood from the fowls' bodies, while lice have biting mouthparts and live on the skin and feathers, causing intense itching and annoyance. Mites live on the fowl's body at night only, hiding in cracks and crevices during the day. They appear red when gorged with blood, or white when there is little blood in their bodies.

To kill the lice we must treat the hen's or chick's body, as the lice live there practically all the time. There are several kinds of these lice, but they all yield to the same treatment, namely, a good dusting. The dust fills up the breathing pores in their bodies, and thus suffocates them. A good insect powder may be made from equal parts of fine ground tobacco and powdered sulphur. Snuff is also used. There are a number of insect powders on the market and most of them prove very satisfactory. Pyrethrum or Persian insect powder can be purchased at any drug store and if fresh is effective. The essential thing is a finely pulverized substance that will go through the feathers.

Having carefully dusted the chicks (and hens, if the chicks are running with them) clean the houses and remove to clean ground. A good dust bath should be arranged so that the hens and chicks may help keep themselves clean. An excellent dust bath is made by drawing a load of "chip-dirt" and dumping it in the yard where the little fellows may have ready access to it. For winter use a box partly filled with fine sand, road-dust, land plaster or coal or wood ashes answers very well. A mixture of sand and land plaster seems to please them more than either one alone. Some use wood ashes alone, but a mixture of wood ashes and road-dust, or fine sand, makes a heavier bath and therefore more effective in cleaning the lice out of the feathers.

If the fowls or chicks are badly infested, do not depend entirely on a dust bath to rid them of the parasites. Examine them carefully in the day time and if small parasites are found on their bodies, give them a thorough dusting, or if small red or white mites are found about the cracks and crevices of the house and perches, thoroughly treat as described above. Simply because a house has not been used for a long time is no assurance that it is clean. It may be full of vermin even after years of idleness. Keep a constant lookout for vermin, and treat thoroughly when found.

The result of one setting of eggs sold by E. F. McAvoy, Jr., Schenectady, N. Y., to Mr. J. R. Windolph, Supt. Treasury Dept., Lancaster, Pa. The four pullets from Oct. 1st, 1906, to Oct. 1st, 1907, laid 1016 eggs. Note the long backs with low-carried tails.

The Houdan Fowl, From An Economic Point of View

(Written expressly for the American Fancier)

By Rev. C. E. Petersen

IN the multitude of letters that we receive yearly regarding the Houdan Fowl, one thing stands out very prominently, namely this: that there are a great many people who are very interested in any fowl that seems to give promise of a more than ordinary egg supply and that as far as a table bird for home use would promise to be of the size and quality that as a general thing goes into the making of a utility bird.

And it is to answer these inquiries in a more public maner that I am writing this article, for though much may be said in favor of many other breeds and varieties we are fully convinced that as much if not more may be said in favor of the Houdan.

The fancier who breeds fowls on a small scale and is confined to limited quarters will find in the Houdan about all that he desires, for it will give little trouble to his neighbors, and as it is very docile in its disposition it can be kept inside of a four foot fence with perfect safety for it will seldom, if ever attempt to fly over it.

And even when it is not necessary to fence it in, it will not stray very far away from the premises, in fact the disposition of the bird is such, that it is easily contented in any place wherein it is confined and seems exceedingly appreciative of being petted, which makes it a fowl that if once kept by any one becomes a favorite forever and when all its good qualities are added the fowl par excellence.

A great deal has been said by writers of ancient date (and some modern ones that did not known any better), that the Houdan is a fancy bird, and not hardy of constitution, and as a consequence, a bird that don't easily adapt itself to general utility purposes.

This is about as false as anything could be, as there is no hardier race of fowls in the country that will stand as much cold and exposure to low temperatures as will the Houdan fowl.

We have bred the Houdan from the time when the Houdan was still in its undeveloped state as far as this country goes, that is before we got it up to the present standard requirements, and whatever faults we might have found with it at that early date, and up to the present time it certainly was not that it was a tender variety and hard to raise, for we never bred a more hardy and a more robust fowl than the Houdan.

It is true that it is a crested bird and that when left out in a drenching rainstorm and then with a wet crest get under some bush in the garden and take a dust bath, that it don't look like it wants to have its picture taken just then, but for any hurt received from it, we never even heard one of our birds sneeze from it, and you will of course admit that when a person loves their birds and wants the very most from them as far as profit goes, that they will not leave them out doors in long, heavy rain storms, never mind what varieties they may belong to, for though it *may* not hurt them, we feel sure that it certainly will not do them any good.

But the good old Book says: "In the mouth of two or three witnesses is a truth established," and so let us see what others say regarding this matter.

George O. Brown says:

"It is to be hoped that much stress will be given to the fact that Houdans are a utility breed in as strong a degree as they are fancy."

Frank W. McKenzie says:

"They are very hardy and strong and they seem to be immune to the common ailments of other fowls."

And we could follow up these testimonies with a mass of evidence collected from people living in every state of the Union to whom we have shipped fowls, but which would simply take up space that can be better utilized.

We have sent Houdans to *Hot Africa* and to the coldest part of Sweden and Norway, and we have kept them here in cold Maine, where the temperature runs down below zero for days and for weeks at a time, and in all places and under all climatic conditions they have been as hardy as any fowl could possibly have been, and on this score have proven themselves entirely satisfactory.

As layers they are excellent fowls and with ordinary good care will fill the egg basket when other fowls will crowd so as to keep warm, and though I am sceptically inclined about all and any of the 300 eggs a year records in any breed, let it be fully understood that I know from an actual experience of many years that the Houdan will lay as many eggs during the year as any other variety, and a good many more than a good many of these other varieties.

Better still, she will lay the most of them when they bring the best prices in the market, for with good feeding, and good housing, and by good housing I simply mean a house that is dry and sunny, for with our short and cold Winter days we need to let in to the poultry house all the sun we can get; and she will repay you with a fair number of nice, large, white eggs of excellent flavor, when other breeds are singing in doleful tones:

"Come gentle Spring, ethereal mildness come."

But again let us draw evidence from other sources than our own and see what others have found regarding the matter of egg production

J. H. Drevenstedt says:

"About twenty years ago we lived in the wicked City of New York, but spent the Summer in the charming country and cooling atmosphere of Ottowa County, New York.

"The splendid house wife of the farmer that we boarded with made life worth living by the faculty of catering to the palate of her boarders and we shall never forget the delicious cream, butter, eggs and chickens.

"Among the dainties we discovered some very fine, large, white eggs, which, when boiled, were fit for the gods to eat, and inquiry elicited the fact that these eggs were laid by 'a speckled fowl with a bush on the head' that the farmer had purchased at some poultry show. It was the Houdan.

"And this old speckled hen never failed to lay her quota of eggs, and when later on, one Saturday morning, the butcher had failed to come with his meat, the good farmer's wife, knowing I was interested in chickens, asked me whether I would not select one for the Sunday dinner, and we accepted the trust and selected 'a speckled hen with a bush on the head,' and the result was as fine a chicken dinner as we ever sat down to.

"Tender, juicy, and melting, the yearling hen made us forget that we were in a boarding house, and convinced us that Delmonico could not have served a better fowl. It was a Houdan.

"The Houdan is one of the greatest fowls in France, the country where fine chickens for the table are and have been the rule, and there is no reason why its magnificent qualities cannot be equally as well appreciated in this country."

A. V. Meersch says in The American Fancier of 1900:

"I could not help putting in a few words on the Houdan in your special issue of that breed, as I came from very near the locality where they originated.

"My grandfather, with whom I lived for many years, kept some 2,000 Houdans and made good money out of them, as each hen averaged 175 eggs per year.

"I often wonder why the Houdan is not more cultivated in America, as it is a fine layer and bears confinement extremely well, and for table use has no equal.

"Any time a chicken is wanted for the table in a hurry, pick one up and it will be found plump, dressing well, showing no pin feathers nor ungainly breast bone and showing a lovely white skin so esteemed by French epicures.

"They do well on a free range, good foragers, comparatively small eaters and when suitably housed, free from disease.

"Their eggs are large, white, and very uniform, and if the breed was only tried on a large scale it would be found to outstrip many breeds of reputation."

And we could easily go on ad infinitum, but this is satisfactory for our purpose, and goes on to establish the fact that the Houdan is not only a fancy fowl, as has been so often stated, but a valuable fowl that will fill all requirements as a utility fowl.

In shape it approaches the Dorking, being in form a very bulky bird, but with graceful curves that gives it style and finish.

With a fairly long body, indicative of a good supply of breast meat, for in this important respect there are few, if any, that excells the Houdan as a source of white meat supply.

Breast, full and round, not flat like a board, coming well forward, the breast bone deep in the keel, extending from the forepart toward the tail that there may be ample room for the production of flesh.

Low on the feet, the hock coming nearly up into the fluff of the body, this makes up the shape of the Houdan, that is the only shape, and the only type that should be recognized among breeders, it is what the standard calls for. A long-necked, slim bodied bird, standing high on its feet is not a Houdan, yet we have seen lots of that kind, they are not the kind that the standard calls for, and should be avoided. The real cause of very many of these ill shaped birds is oftentimes from mercenary purposes, as eggs can be purchased during June and July for less money than earlier in the season, very many people will buy at this time, but late hatched birds will never mature into the finely shaped and heavily built Houdan, even under the very best of care.

The Houdan will take up the best part of six months to fully mature, and the time is well spent for there is no gain to force birds into early laying that a strong record may be established, and as many, if not more, eggs can be obtained after the bird has become fully mature, and the egg will be larger and the laying more steady. We have had Houdans starting in to lay at four and a half months old, but we do not encourage it, for it should be remembered that size of body is one of the chief essentials in a table fowl, and this as well as strong productiveness are the two things that in the Houdan stands high from the standpoint of utility men.

The Houdan is an easy bird to keep up to size, for all that is necessary is to hatch the broods out early enough to give them a fair chance to mature, and if the birds come from a strain in which standard size has been bred for generations, no trouble should be had on that score.

Size is easy to get, easier than any other point, but be it remembered that quality of standard bred Houdans is an entirely different proposition and not so easy to be attained. Plenty meat and plenty eggs are the pass words of the utility men and any one that is willing to take the trouble may, by careful selection and the use of a trap nest system establish good laying records, but when it comes to breeding for style and quality of plummage, which means color, crest, and in the last, what is so frequently lacking, form and shape, and size, it is not so easy, for this is a matter of skill in the fancier.

Another great point in favor of the Houdan is, that it is a very small eater when size of body is taken into consideration. We know by actual test that it will take one-third more food to keep any of the American breeds, which to the utility man means a great saving of expense.

Much more might be said, but in the summing up of the points of this valuable old breed, the following points of excellence are facts well established:

1. Quick to grow and feather as a chick, making broilers almost as soon as the Wyandotte, Plymouth Rock, or Brahma.
2. Strong fertility of eggs.
3. Great productiveness of the females.
4. Largeness of its egg, and the pure, white shell.
5. Ease of confinement and perfect contentment in restricted quarters.
6. Perfect quality as a table fowl, both as to flavor of flesh and the very small per centage of waste when dressed, the loss being only about one-eight part.
7. Hardy of constitution, adapting themselves to all kinds of climates and conditions.
8. Good Winter layers when given any kind of decent care and attention.

Surely, these qualifications are enough to entitle the Houdan to better recognition among poultrymen who wanted a fowl that will not only give them what they desire in meat and eggs, but at the same time furnish them with a bird that for beauty and docility has never been equalled, when a few fowls are wanted for both profit and pleasure.

HOUDAN PULLET. BRED AND OWNED. BY REV C. E. PETERSEN.

Further Reporting on Madison Square Exhibition

The January 1st issue of this publication contained the complete list of awards and report on the judging of the different classes. Further reporting follows:

BARRED ROCKS showed an improvement over last year in clearness of barring. 1st cock well barred. 1st hen magnificent in color, fine barring, good shape. 1st ckl. grand in size, fine head and body. 2d ckl. almost equal in barring, fine color but poor in shape. 1st pullet fine color and barring. Second, third, fourth and fifth pullets were in close competition.

RHODE ISLAND REDS—Single Combs. 1st cock even color, fine shape, head slightly scarred. 2d not as good in color but equal in shape; good head. 1st hen wonderful in shape and color. 2d hen almost her equal. 1st and 2d ckl. so close that many could not see why 1st was awarded the Blue.

ROSE COMBS—1st cock grand shape, excellent comb. 1st hen magnificent in color. 1st ckl. good head and color. 1st pullet fine shape and head; color poor.

WYANDOTTES — Columbian. 1st cock good in shape, followed closely by second and third. 1st hen typical in shape. 2d hen a magnificent specimen. 1st ckl. a grand bird, fine in color. 1st pullet only a little better than second. Golden—1st cock a wonderful bird; magnificent lacing, fine in shape and head; excellent comb. 2d almost as good, but poor in comb. 3d poor in head, but grand in shape. 1st hen grand in shape, very poor in head. 2d almost as good as first, and thought by some to be her equal. 3d magnificent lacing. 4th grand in shape but poor in head. 1st ckl. wonderful in striping of saddle and hackle; a wonderful bird. 2d fine in comb. 3d a good one, but equaled by fifth. 1st pullet a typical bird, magnificent in shape. 2d also a good one. 3d almost if not equal to second. White—1st cock grand in color but poor in shape. 2d superior to 1st in shape. 1st hen good in color and size, poor in shape. 1st ckl. good in shape. 2d almost her equal. 1st pullet a good one, but lacking in type. 2d almost equal to first.

Game Bantams at New York

The exhibition of Game Bantams on display at New York was indeed very high class, in fact many of them being real top-notchers. 1st B. B. R. cock and hen were indeed of a high order and well placed. There were several other good ones in the class. The 4th prize hen being the best colored bird in her class. Very tall, fine shape and might have been higher. The 4th cock was another grand old bird, but gone in breast color. The 1st B. B. R. ckl. very small but very bad in color; carries tail rather high. 2d much larger, good color, very reachy, fine in station but too large for a Game Bamtam. 1st pullet real good in shape, fair in color, good station —wins. In Brown Reds all were of a high class. The 1st cock and hen very good. The first ckl, 1st and 2d pullet were deserving the honors. Golden Duckwings also good. 1st prize cock winning Champion Ribbon for the best Game Bantam any age, variety or sex. Silver Duckwings fair; no real clinkers among them. Red Piles the best ever seen together. 1st and 2d cock good ones. 1st lacking in top color. 1st and 2d hens hard to find fault with. 1st and 2d ckls. both grand shape, style and color, with fine, whitebreasts, great reach. The rest of the class was also of a very high order. 1st, 2d and 3d pullets fine color and shape, grand style and station—little to choose between them. The Berchins this year were a revelation—not a bad one in the class. The winners really great. 1st hen, 2d ckl., 2d pullet the class of the lot and showed more improvement than any other variety of Game Bantams. There were also some fine Whites shown, the 1st cock and ckl. being the best Whites than have been seen at the Garden. The classes were judged by A. F. Pierce. In some instances the awards were well placed, but many of the winners in some of the classes could have been changed with little criticism. At a show of such importance as Madison Square Garden it is hard to please everyone, and this was the case of December 17th, 1907.

Bantams at the Garden

By J. Willoughby Mitchell.

The turnout at this, the premier show of the country, must be considered as satisfactory; an increase on the previous year; the largest collection ever on view in the Garden.

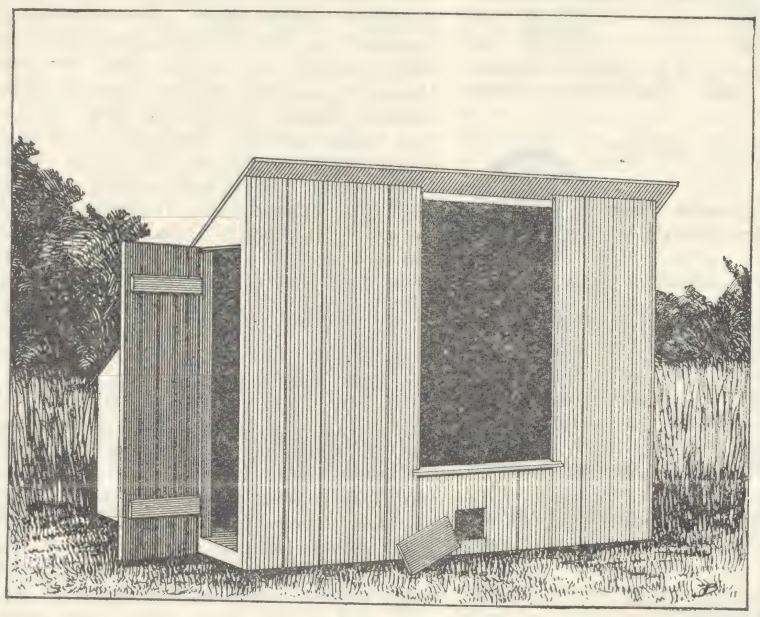
Mr. Chas. M. Smith is to be congratulated upon his awards, which seemed to meet with the entire approval of the exhibitors generally.

COCHINS as usual were the largest, and in point of quality, the best variety represented—the buffs and blacks especially so. The former seemed more even in color and type than ever, and large classes was the order. White Cochins, on the other hand, seem to have made little or no progress in the past few years and do not appear to attract the breeder as do the other colors. While the partridge are fewer still, and while the color in the males shows improvement, they are still a bit too big. Inbreeding will, no doubt, improve this.

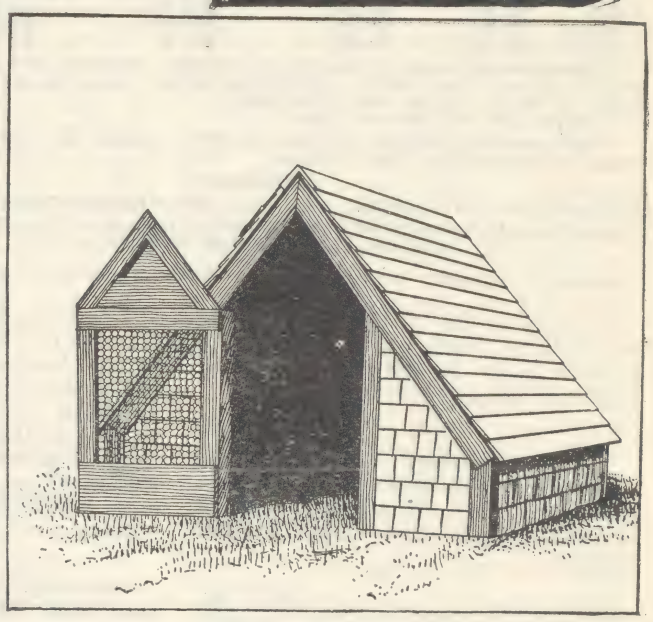
BLACK ROSE COMBS were a nice collection, the winning cockerel being a grand little bird, with nice flow of feathers; would, however, be improved by better lobes. Females nice classes, but from an English standpoint, the showing of them is more or less of a lottery. Having accepted the English standard on males, why not stick to it in the females?

WHITE ROSE COMBS, though not so numerous are making some headway here; a beautiful variety when good and nicely shown.

SILVER SEBRIGHTS were about an average collection for New York. The clear, black and white lacing cannot be secured by making up a lot of birds of different strains in a haphazard fashion. I view them as the most difficult variety of bantam to breed champions in, but well worth the trouble, as on all hands they are admitted to be the prettiest.



GOLDEN SEBRIGHTS — Comparatively only a middling lot for a show like this, but one bird in the lot that had the essential ground color, this the winning hen. Other faults are irregular lacing, smuttiness and shaftiness. The good ones here are few and far between.



LIGHT BRAHMAS were an excellent lot, both for color and shape, but the size must be reduced if they are ever to take their place as a popular bantam. The standard weights seem too high now, and a number of the exhibits far exceeded the standard. This remark also applies to the Darks.

POLISH are certainly on the up-grade here, with the Whites as favorites. A very taking variety, this.

JAPANESE, while a much larger entry than usual, still lack class, many pinched and wry tails being seen, while the true Jap shape is conspicuous by its absence. It is regretable that this variety is in so few hands both here and in England. A really good Jap is very attractive, but when poor in quality and feather nothing looks worse.

The following illustration is that of a colony house for chickens, used at a large poultry farm in New York State. This house is about 8 ft. long and 7 ft. wide; 7 ft. high in front and 3½ ft. in rear. The walls are built of one thickness of matched boards. The floor is of wood. The hover is placed over this house for the chicks when first hatched. When the chicks are from six to ten weeks old (depending largely on weather conditions and the developments of the chicks), the heater is removed and the perches are placed in the rear of the house, about sixteen or eighteen inches above the floor.

This building is about 9 ft. long, 7 ft. wide, and 6 ft. high at the center, and 18 inches at the eaves. The door is covered with fine wire netting so as to provide for light and ventilation. If desired the door can be covered with a muslin curtain which can be swung open during the day and on warm nights. Such a house will accommodate ten to fifteen fowl in accordance to the amount of yard room, breed, etc. This house is portable and can be readily moved from place to place. The chief recommendation of a house like this is the economy of labor and material needed to build it.—*Farmers' Bulletin.*

Mohntown, Pa., Poultry Show

Mohnton, Pa. is about five miles from Reading, by trolley. Its third annual show was held this year Thanksgiving week.

Frank G. Bean and W. Theo. Whittman placed the awards in poultry; W. G. Stanton in pigeons.

The hall is a large, new one, and an especially good one, when the size of the town is taken into consideration.

Asiatic classes were small. There was an especially nice pen of Light Brahmas.

Plymouth Rocks, Wyandottes, Rhode Island Reds and Leghorns made up the bulk of the show. Barred Rocks were especially good. First pullet was an extraordinary good one, probably the best bird in the show.

White Plymouth Rocks were large classes and Buffs nearly as large, with some especially good ones.

A few Partridge and Silver Plymouth Rocks.

White Wyandottes were full classes.

Columbian Wyandottes the same, with a ckl. that was practically free of brass. this bird better shape he would be a valuable breeder indeed.

Partridge Wyandottes, unusually large classes, the males being fine. Silver laced not so large, but plenty of Goldens with splendid size and color in the winners.

S. C. Rhode Island Reds one of the largest classes. First cockerel was a star, and the winning females weren't half bad. Rose Combs not up to Single Combs in size of classes or quality.

The best birds among Single Comb Brown Leghorns were 1st ckl. and 1st cock.

Single Comb White Leghonrs showed much quality in 1st ckl. and 1st and 2d pullet and 1st pen.

Single Comb Buffs, large classes and good quality.

White Cochin Bantams included some especially nice birds.

The members and officers of the Mohnton show are hustlers, both as to working and for advertising their show. They had whole columns about the show in the Philadelphia and Reading papers and had big gate receipts Thanksgiving day. Pigeons pretty nearly equalled poultry in numbers.

AWARDS

LIGHT BRAHMAS—Harry Doremus, ckl. 1, hen 1, pen 1.

PARTRIDGE COCHIN—Barton Weinhold, ckl. 1.

WHITE COCHIN—Fred N. Baer, ck. 1, pul. 1-2-3-4.

BUFF COCHIN—Nessinger & Hess, ck 2, hen 1.

BLACK LANGSHAN—Chas. G. Rhoades, ck. 2, hen 4, ckl. 1, pul. 1; Augustus Mosser, ck. 1, hen 1-2-3.

BARRED PLYMOUTH ROCKS—O P. Noll, ck. 1-2; J. G. Werner, ck. 3-4, hen 1-3-4, ckl. 1-2-3, pul. 1-2, pens 1-2-3; Robert Reigner, hen 2; Lewis Focht, pul. 3; Joseph A. White, pul. 4; Benjamin Young, ckl. 4; Jacob Custer, pen 4.

WHITE PLYMOUTH ROCKS—Davies, ck. 1, hen 2, ckl. 4, pul. 3; Joseph A. White, hen 4; Chas. C. Carver, ckl. 2, hen 1; Raymond Swab, pul. 1; Homer L. Stork, ckl. 1; Hiram Riegner, ck. 3, hen 3; Samuel Rosenstock, ck. 2, pul. 4; Homer Ruth, pul. 2, ckl. 3.

BUFF PLYMOUTH ROCKS—Geo. W. Hatt, ck. 2, ckl. 1, pul 1.3-4; J. A. Orth, ck. 1; All-Bright Poultry Yards, pul. 2.

PARTRIDGE PLYMOUTH ROCKS—J. C. Kessler, pul. 1-2-3.

SILVER PLYMOUTH ROCKS—Nessinger & Hess, ck. 1, hen 1.

SILVER LACED WYANDOTTES—O. M. Romig, pul. 1-3; H. D. Martin, pul. 2-4.

WHITE WYANDOTTE—Irwin P. Fessler, ck. 1; Geo. Himmelreich, ck. 2; J. H. Fichthorn, ck. 3, pul. 1; Geo. E. Leisey, ck. 4; Harry K. Stork, ckl. 2, hen 2.

GOLDEN WYANDOTTE — Nessinger & Hess, ck. 2, hen 3; Samuel Greth, ck. 1, ckl. 2, pul. 1-2; H. D. Roth, ck. 3, hen 1-2, pul. 3-4.

PARTRIDGE WYANDOTTE—A. O. Fisher, ck. 1-2, pul. 1-3-4, hen 1-2-3, ckl. 1-2-3, pen, 1; Frank W. Slichter, ckl. 4, hen 4, pul. 2, pen 3; H. M. Doty, pen 2.

COLUMBIAN WYANDOTTE—H. C. Bamforth, ckl. 1, pen 1; John Springer, ckl. 2, pul. 3-4; All-Bright Poultry Yards, ckl. 3-4, pul. 1-2.

S. C. BUFF ORPINGTONS—Geo. D. Nothstein, ck. 1, ckl. 1, hen 1, pul. 1.

S. C. RHODE ISLAND REDS—Samuel Schonour, ck. 2, hen 1, pul. 1-3; Chas. F. Potts, ckl. 3; Wm. Fleischer, hen 2; Daniel R. Hatt, pul. 2; David B. Trout, ck. 1, ckl. 1-2, pul. 4; Joseph A. White, pen 1.

R. C. RHODE ISLAND RED—W. C. Argoe, ckl. 1, hen 1, pul. 1-2-3; Carl Corine, ckl. 2.

R. C. BLACK MINORCA—All-Bright Poultry Yards, ck. 1.

S. C. BLACK MINORCA—James Epler, ck. 1.

S. C. BROWN LEGHORN—Adam E. Young, ckl. 2, pul 2; Wm. Slichter, pul. 1-3; R. W. Kegenrise, ckl. 1; E. G. Wilkinson, ck. 1; J. Sylvester Keiser, ck. 3; ckl. 3; Millmont Poultry Farm, ck. 2, pul. 4.

R. C. BROWN LEGHORN—John J. Rebholz, hen 1, pul. 4.

S. C. WHITE LEGHORN—Fred M. Baer, ck. 1-2; J. H. Fichthorn, ckl. 1, pul. 1-3-4, pen 1; Geo. Himmelreich, ckl. 3; Wm. Slichter, pul. 2; Joseph A. White, ckl. 2.

S. C. BUFF LEGHORN—Howard M. Westley, ck. 1, ckl. 2-3; Wm. H. Schultz, ck. 2, hen 1-2, pul. 2; Lewis Hartranft, ck 3, hen 4; I. S. Weidler, pul. 4; Homer L. Stork, ckl. 4, pul. 1; Herbert Slichter, ckl. 1; James Epler, ckl. 3.

S. D. W. LEGHORN.—Nessinger & Hess, ck. 1, hen 1.

WHITE CRESTED BLACK POLISH—H. D. Roth, pul. 1-2.

HOUDANS—H. D. ROTH, ckl. 1, hen 1-2, pul. 1-2-3.

SILVER SPANGLED HAMBURG—H. D. Roth, ckl. 1, hen 1, pul. 1.

CORNISH INDIAN GAME—Baker Royer, ck. 1, hen 3; Nessinger & Hess, ckl. 1; Wm. Carter, Jr., hen 1-2.

WHITE INDIAN GAME—Nessinger & Hess, ck. 1, hen 1.

WHITE JAPANESE SILKIES—Claude DeHart, ck. 1, pul. 1-2.

BUFF CHOCHIN BANTAMS—Lewis Hartranft, ckl. 1, pul. 1; Wm. E. Kyte, ckl. 3; Homer Hagy, ckl. 2, hen 1-2, pul. 2-3; John Slote & Son, ck. 1, hen 3, pul. 4.

WHITE COCHIN BANTAMS — Lewis Hartranft, ckl. 1; White Cochin Bantam Yards, ckl. 2-3-4, hen, 1-2-3-4, pul. 1-2-3-4.

PARTRIDGE COCHIN BANTAMS—Emma F. Hatt, ckl. 1-3, pul. 1-3; Andrew Fisher, ckl. 2-4, pul. 2-4.

LIGHT BRAHMA BANTAMS—Geo. H. Fichthorn, pul. 1-2-3-4.

GOLDEN SEABRIGHT BANTAMS—Homer L. Stork, pen 1; Lewis Hartranft, pul. 1.

WHITE PEKIN DUCK—A. W. Grime, duck, 1, drake 1.

TOULOUSE GEESE—..... ..... gander 1, geese 1-2.

"Faultless" Houdans

The old-fashioned, heavy-bodied, pure bred egg machine. Bred from trap-nest system for 17 years.

E. F. McAVOY, Jr.

SCHENECTADY, N. Y.

Secretary National Houdan Club

WIGWARM BROODERS

are the product of 17 years successful brooder building. New catalog explains all about them. Free on request, Write today.

E. F. HODGSON, Box 55, Dover, Mass.

TRADE MARK WIGWARM

Barred White and Buff Rocks, Columbian Wyandottes

100 White and Buff Rock Cockerels, bred from Boston first prize winners. Up to weight and ready for business. Why not order a pen or a yard of old or young birds mated for best results. All stock as represented or your money back. Eggs in season, $4.00 per 13; 3 settings $10.00; $15.00 per 100. J. P. KEATING, WESTBORO, MASS.

The AMERICAN FANCIER

Published by

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

In looking over the list of winners at Madison Square Garden we were pleased to see so many of the advertisers of this publication successful.

* * *

We have always striven to have a "quality circulation," and as the advertisers have the quality of stock to offer, each help one another greatly.

* * *

From time to time we notice the very alluring notices given by our contemporaries to their readers, regarding the quality of stock offered by advertisers. But at Madison Square Garden and other large exhibitions they failed to appear; there was a reason.

* * *

The Boston Show, January 14-18, will be fully reported in the February 1st issue. The following will officiate: Sharp Butterfield, Cochins, Dorkings, Ornamental Bantams. F. H. Bryant, Pet Games. C. A. Ballow, Dark Brahmas, Games and Game Bantams. F. H. Davey, Golden, Silver, Black and Silver Penciled Wyandottes. Geo. H. Dexter, Minorcas. Geo. V. Fletcher, Columbia Wyandottes. Julian Frank, Hamburgs. E. H. George, White Rocks. H. R. Ingalls, Buff Wyandottes and Buff Rocks. R. Oke, Langshans, Orpingtons, Andalusians, Red Caps, Spanish Faverolls. T. F. Riggs, Rhode Island Reds, Houdans. F. W. Rogers, Partridge Wyandottes, Partride and Silver Penciled Rocks. C. A. Wheeler, Light Brahams. C. H. Wells, Barred Rocks. Miss Sophia Pitchlynn, Leghorns.

* * *

We have heard considerable fault-finding with the awards at Madison Square Garden, in the different classes. This usually appears in a show of such importance as the above.

We have been asked to publish a certain article pertaining to the decisions, but unless sufficient proof is given, it would be very poor policy on our part to accept the words of a dissatisfied exhibitor against the judge. We are well aware there were mistakes made, and also some errors which hardly looked like mistakes, but, ———

* * *

Golden Wyandotte Breeders will hold a meeting at the Boston Show and will try to form a club.

Mr. Geo. J. May will judge the Orpingtons, Cochins, Dorkings and Indian Games at the Hartford Poultry Exhibition. The Association in selecting Mr. May to place the awards in these classes, have made a most excellent choice, as Mr. May is well qualified, having been a breeder and exhibitor in England before coming to America.

* * *

Bradford, Penna. Jan. 27th to Feb. 1st, 1908. $340.00 in Special Cups and a long list of other Specials. Chas. Stewart, Secy.

* * *

First Annual Meeting of the New York State Poultry Society, and the Annual Meeting of the New York State Experimental League will be held in connection with the Fifth Annual Show of the Cornell University Poultry Association, February 18th to 20th.

* * *

Mr. W. R. Graham deliver an interesting talk on Incubation before the Ontario Experimental Union, and in addition to making valuable suggestions, had the following to say:

"Our experiments at the poultry departments so far do not go to show that the use of moisture under ordinary conditions either helps or retards a successful hatch. What effect moisture may have upon the vitality of chicks is another question, and one upon which we hope to get some information from our experiments next season.

* * *

The Orpington is popular in England as a Show Bird and a Utility Fowl. Mr. James Turner, in *The Feathered World*, referring to Buff Orpingtons, writes: That if a good laying strain is hatched out in February or March there will be plenty of eggs from October until March, and speaks highly of the Orpington as a table fowl, bringing 1s. per lb in February, and 7½d. per lb in July and August. From a show point of view he writes: "Classes are provided for them at almost every show in England, and they are invaribly well filled. At the big shows there are often from twenty-five to seventy in one class, which goes far to show how popular the Buff Orpington is. Many typical birds change hands from at $25 to $50 each, and what are not fit for the show pen are sold for laying purposes at $1.25 to $2.00." Mr. Turner gives the following information on mating:

"First of all, if you hope to make a good start and know nothing about them yourself go to some reliable breeder (not a dealer, but a man who breeds the birds he shows year after year). Like will not breed like in poultry, and you must mate with one strain if you hope for success. I might buy the Dairy winning cockerel and the winning pullet and not get a bird worth £1 from them if they were two different strains. Tell him how much you can afford to give for a trio, and leave it to him, and if he is an honest man he will do his best for you, I am sure; but you must not expect to breed Dairy winners from a trio costing lower than £3. It cannot be done. If you pay £20 or £30 for a good breeding trio, then you should hope with reasonable luck to breed something well worth looking at.

That was how I started four years ago, and I have never had cause to regret it yet.

A great point in mating buffs is to get your hens or pullets big enough, deep and wide, and get good, sound under-color, free from mealiness, and see that they are a rich buff, not a pale, washy color, or you will never breed a sound bird. Never mind if you have a bit of dark in tail if the other points are good, but be sure the cock is good in this respect. The cockerel need not be too big. I like one rather on the dark side, one rich shade from head to tail. He must have good under-color, and a pure buff tail if possible. If he has a little white in flights I do not mind for pullet-breeding. Let both cock and hens have plenty of bone, and then with careful feeding you will get plenty of size, and you must have size in the show-pen nowadays. Let me once more impress upon you to keep one strain. If you want fresh blood, go to someone that you know has birds of the same strain as yours, and get it that way. If you get other blood into your yards you may loose all you have been working for for years—fixed color, and color is the difficult thing to get in buffs. Start your chicks right, and keep them going, and when they get about four months old you must shade them from the sun and weather. You can soon pick out those that are not going to be of any use, and kill them off. If you are a novice, get someone to help you, or you may kill a valuable bird in its chicken feathers; but you will soon learn which are of no use. The Buff Orpington Club standard will help the novice. It is as follows: *Head*: Eye red or brown, red preferred; beak white or horn-color; comb, face, ear-lobes, and wattles bright red; comb small, neatly set on head, evenly serrated, and straight; wattles medium. *Color*: Clear sound even buff throughout to skin; skin and flesh fine and white. *Type*: Deep, massive, broad, and lofty; body short and big; breast deep and full, and well carried forward; tail rather short and compact; back short, and nicely curved; saddle wide; carriage bold and upright. *Feet and Legs*: Short, straight, white in color, perfectly free from feathers, four toes on each foot. *Size*: Cockerels, 8 lbs. to 11 lbs.; pullets, 6 lbs. to 9 lbs.; old birds sometimes heavier.

* * *

"A big, shapely, well-matured Barred Rock of slightly inferior marking would," says J. N. Williams, the noted English Judge, "win over a minature, shapeless, well-marked bird." He also says, "Fineness of barring, this is closeness and narrowness of barring, with clearness and distinctness, is an essential to the making of a good bird. But with all this marking he may not, as yet, being in the chicken stage, be a very good bird. There is a material difference in a show pen between a bird that will grow into something, and one that has already grown. And I am of opinion that birds of marking should, like all other birds, be judged by the full standard, and not for marking only. If we are to judge by marking only, why then give marks in the standard for size, shape, legs and headpiece?

3 Great Books FREE.

We have just succeeded in completing with a book publishing house one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the authors of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list we selected, after careful deliberation, the twelve novels which have been found to have proved most phenomenally popular. For interest-riveting mystery, daring adventure, love and thrilling romance no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, the AMERICAN HOME MAGAZINE. This big, new periodical has drawn upon all the almost unlimited resources of a great publishing organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, and screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvelous creations of those master minds of mirth and fun—Opper, Dirks, Bunny, Outcault, and all the rest. Of the magazine's great editorial writers only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvelous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new monthly. For the strange, the bizarre, the unlike, the fascinating, read the brilliantly interesting new AMERICAN HOME MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme.)
No. L37. The Love That Saved Him. (Mrs. Stephens.)
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No. 34. My Mother's Rival. (Braeme.)
No. 6. Lany Gwendolin's Dream. (Braeme.)
No. 26. The Bride of an Hour. (Stephens.)
No. 16. Beauty's Marriage. (Braeme.)
No. 35. Farmer Holt's Daughter. (Garvice.)
No. 25. A Maiden All Forlorn. (Duchess.)

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—AMERICAN HOME MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

Taylor Bros., Dept. H, Camden, N. J.

The Boston Show, January 14 to 18, 1908, should bring together another fine display of pigeons. By looking over the list of judges we should say the awards should be placed on the proper entries.

Messrs. W. Kennedy, Jacobins and Orientals. Alex. Ingram, Dragoons, Owls, Turbits, Magpies. A. E. Smith, Pouters and Pigmies. Samuel Johnson, Fantails. A. J. Edwards, C. L. Tumblers, Tipplers. J. Glynn, Muffed Tumblers. Geo. Horseman, Exhibition Homers. F. R. Wordell, Record Homers, and Geo. Feather, Swallows, Nuns, etc.

The classification starts with Pouters, and just four classes alloted to the once popular bird, and then when one thinks of this noble bird competing with Squab breeders next season at Madison Square Garden, we think it a most extended classification.

The list of specials is very enticing and should prove to be a fine drawing card.

This year the pigeon department is in the hands of Mr. Richard Whitney, and we think he will be equal to the task.

A number of Specialty Clubs will hold their annual meetings at Boston, which should make these particular classes strong.

Mr. A. E. Smith will officiate in Pigmy Pouter Alley, and with the fine list of specials offered by the club, Boston should fare better than New York, in number of entries.

The Pigmy Club have had a most extended classification at both our large shows, and it is now up to the members whether or not it shall last.

* * *

Specialty Clubs have done much to promote interest in their own variety, but at the same time we believe by offering all specials at only one show (always the club meet), has made the others suffer.

In the case of New York and Boston, both large exhibitions, we will see a certain variety at New York (the club meeting here), with a greater turnout, in a month's time at Boston, only a few, and a very ordinary lot at that, and vice versa.

If the clubs would, instead of offering all specials at one exhibition, divide them, we would probably see more shows strong in these particular classes.

The judge also has an effect on the entry. We see no reason why the same person should officiate in the same varieties at two of our large shows, coming within a month or two of one another. This was done this year at New York and Boston, and was decidedly harmful.

* * *

Although much has been stated, and very clearly at that, there are many fanciers who do not know the make of bands that are recognized by the American Pigeon Club, and believe the English official band is not; this is a mistake, as the A. P. C. will recognize the official band of 1908.

* * *

Messrs. Frank W. Gorse and W. K. Nester, the newly elected Secretaries of the Jacobin and Dragoon Clubs, respectively, both have offices of importance, as the clubs are very active and have turned out grand displays the past season, and to make the exhibition season of 1908 an improvement is no little task.

* * *

Dr. F. H. Howland was elected Secretary and Treasurer of the Eastern Fantail Club at the last annual meeting, held at Madison Square Garden. In selecting the Doctor, the club has for its secretary, a fancier well-known to all Fantail breeders, which should be the means of making the season of 1908 a memorable one.

If all Fantail breeders will do their part it will greatly assist the office.

* * *

Mr. T. A. Havemeyer was chosen to place the awards at the next annual meeting of the Eastern Fantail Club. For years Mr. Havemeyer has been an exhibitor in Fantail alley, and has won hundreds of premiums. Always inviting competition, the famous Mountain Side Lofts have always been at the top. Although we are sorry to see these lofts not represented in the open classes, we are nevertheless glad to have Mr. Havemeyer officiate.

* * *

It will not be necessary to arrange the tail feathers on fans next season, as James Glasgow will not have the Mountain Side string to look after. Mr. Havemyer will have the entries alll put in condition. What a treat for some of us who really can't do it. But, we won't know them after James does the trick, but if we watch sharp we can learn.

* * *

Mr. Geo. E. Rowland was elected President of the Fantail Club.

Mr. Rowland has bred, and by the way, imported a few Fantails, and we wouldn't be surprised to see a team shown next year under Mr. Havemeyer, well say, about 30 or 40.

* * *

There is some talk of raising the pigeon entry fee at Madison Square Garden to $1.50, in 1908. The poultry fanciers didn't apppear to object to the $3.00 fee. Will the pigeon men do the same?

* * *

It seems the express companies are careless in the handling of pigeons, and many losses are reported from time to time. During the homeward journey of Mr. Hoskins' birds from the New York show, 13 returned dead. This is certainly a great loss and would cripple most lofts.

Pigeon boxes are generally very light and small, and it appears the express company always finds some place near a steam pipe to pack these cases. The extra rate is for careful attention, which they don't get.

In Memoriam.

It is with great regret, we learn of the death of Mr. George W. Eckert.

Mr. Eckert was one of the best known pigeon fanciers in this country.

The deceased was born in Allentown, April 23, 1856, and was a son of the late Chas. Eckert. He was active in many ways in the city, and especially interested in the success of the Allentown fair.

When a young man, Mr. Eckert evinced a love for animals and developed a fancy for pigeons. His birds were his pets, but he never lauded himself for his stock. They were his last thought when taken ill.

By the death of Mr. Eckert, the pigeon fancy has lost a loyal supporter, and one who cannot be replaced. He leaves a widow, two children and his aged mother, with whom much sympathy will be felt in their bereavement.

Special Prizes

Their Use and Abuse

By E. C. Duffy

THE origin of the special prize is unknown to me, but I have no doubt it was for a good and worthy purpose, and in vogue long before pigeon fancying took on such a commercial aspect, consequently before its abuse for advertising methods was in view.

I am inclined to the belief that the "special" was at one time the only prize given at shows. Prizes donated by fanciers, their friends and other interested parties for the best bird. A trophy, an inducement, something tangible to accompany the honor of winning, something to show with pride and to keep as a memento of, or a monument to some particularly fine specimen possessing "special" features. A winner in his class.

This prize led to great rivalry amongst the fanciers, each one striving to obtain it. It was sentimentally valuable, and not only the owner of the bird, but the populace of a town or district where the bird was bred looked upon the trophy with pride and was envied by other localities not yet so fortunate.

In time, as more and varied varieties of birds were shown, it became evident that they could not compete in one class, the breeds being too dissimilar in their characteristic features so separate classes and more prizes were offered, one for the best of each variety, later one for the best of each color of each variety, then one for the best cock and one for the best hen of each color of the variety. Now we have, not only one for each cock and each hen of each color of each variety, but five for each class and the classes comprise cock and hen for both old and young birds of each color of each variety.

This, however, has come to pass since the show associations inaugurated regular cash prizes as inducements to entice a big display of pigeons for the purpose of attracting large crowds and much gate money.

With the cash prizes offered for this purpose came commercialism and friendly rivalry and competition became venal. Sportsmanship gave way to faking and deceit, the tampering with judges and every other underhand method to annex as many prizes as possible, not only for their value, but for advertising copy.

Many are the game sportsmen who bred and showed their favorite varieties for the love of the birds and the glory of winning, who at once detected the change, repudiated it and quit showing.

Their birds now having as much of their time, care and attention as ever, but only exhibited to their closest friends in their own back yards.

The glory of winning he could forgo for ever, but his honor and the love of his pets will pass only with his life.

Even so, the regular cash prize is a necessary evil, the "special prize" is an unnecessary and far more dangerous one. It only gives the mercenary fancier, or breeder rather, the fakir and the huckster a chance to advertise more prizes won with the additional advantage of placing them where his birds can win without possessing any of the characteristic features of the class to a "special" degree, to say nothing of excelling in them. The very word "special" is a misnomer—in many cases a rank counterfeit.

These should be termed "additional" or "placed prizes."

The only prizes that mean anything to the general public are the regular prizes and the "special," which are those that go with 1st regular prize and such as "best —— in show" "best old —— or best young ——" and those offered for a bird that excels in some essential characteristic features of its variety to a noticeable degree. Yet the "specials" offered for the "best blue Pigmy Pouter cock with rose on one wing only" or "best blue check Pouter hen bred by exhibitor from imported blue check hen" or the "best dun African Owl cock bred in the Orange Free States" and cut just as much figure in the advertisements as so many prizes of merit, as if the bird was worthy of competing for best bird of its variety. While the foregoing does not apply to all fanciers it fits far too many.

I do not object to the placing of prizes where the donor chooses nor to any exhibitor placing one where he'll have a look-in for it, but I do think that they should be designated correctly and not so that the unscrupulous may use the awards as one of merit to deceive the unsuspecting purchaser.

Annual Meeting of the American Oriental Frill Club

The annual meeting of the Oriental Frill Club was held December 21, 1907, at Madison Square Garden, New York, President Meyer in the chair. The following members were present: Dr. C. H. A. Meyer, A. A. Ashley, W. E. Carroll, I. B. Brennaman, Martin Ashman and Geo. B. Hart. After the records being read and approved, the following persons were elected to membership: M. B. Bickel, Allentown, Pa., and Amos Jones, Lebanon, Pa.

Following the acceptance of the reports of the cup committee and also that of the committee to revise the constitution, it was voted to adopt the band chosen by the Executive Committee.

Voted to place an amendment before the members making the dues $2, instead of $3.

Specials were awarded as follows: Best young Satinette, John A. Bauer; best young Blondinette, Ernest Ebisch; best young Bluette, Christian Clusman; best Oriental Turbit, Wm. Ehinger; Novice Cup, Ernest Ebisch.

Voted to secure locks to be used on Oriental coops at principal shows. Ernest Ebisch was appointed to look after the obtaining and placing of specials for the different shows, also to secure articles for the press.

Following the acceptance of the treasurer's report, officers were elected as follows: President, Dr. C. H. A. Meyer, 1st Vice-President, Wm. H. Ehinger; 2d Vice-President, I. B. Brennaman; Secretary-Treasurer, A. A. Ashley. W. E. Carroll was appointed as fifth member of the Executive Committee.

After voting to have the cups the same next season as this the meeting adjourned.

A. A. ASHLEY,
Secretary.

Orientals at New York

By A. A. Ashley.

Orientals came out again at New York with an entry of over one hundred, and quality as good as last year, and in some cases better.

Plain Head Satinettes came out stronger than usual, but the quality is still behind the crested Satinettes. Crested came out with a fine entry, especially in young birds, there being ten of these to pick from. Black or Dun Laced Satinettes also came out well, but not in so large a number as the regular Satinette.

In Barred Blondinettes there was a larger entry than last year, but the quality was not so good on a whole. In Black or Dun Laced there were several good birds and a young Dun Laced, which received special for best young Oriental in the show, was certainly a very fine laced bird, which would be hard to beat in this respect. In Blue Laces there is certainly a good chance for someone to try their hand, for few of those exhibited could be called first class. There were also a few Red Laced, but here also there is much chance for improvement.

Bluettes came out stronger than last year, not only in numbers, but in quality. This variety has taken a great leap in the past three years, and birds which would have won three years ago can do no better now than third or fourth. I do not think that there is any variety of Orientals that has gained as much in popularity in the past five years as these beautiful birds.

Oriental Turbits also came out stronger, and quality far ahead of last year in some cases. This variety has been looked upon as one of little consequence, but it is rapidly coming for-

ward, and each year it is gaining ground. This variety, different from most Orientals, is not booted, and many take up this variety. who prefer the clean legged birds.

Pigeon Awards at Madison Square Garden, Dec. 17-21, 1907.

DRAGOONS—Blue, ck. 1-3, hen 3, W. E. Mills; ck. 2, hen 1, G. W. Churchman; ck. and hen 4, H. & J. Smith; hen 2, F. H. Wright; bred 1907, ck. 1-3, Mills; 2, Wright; 4, H. & G. Smith; hen 1, Churchman; 2, W. P. Booth; 3, A. Bateman; 4, R. E. Wilson. Grizzle or silver, ck. 1 hen 1-2, Mills; ck. 2, C. M. Stanford; 3, H. & J. G. Smith; 4, F. H. Wright; hen 3, A. Bateman; 4, O. W. Opsann; bred 1907, ck. and hen 1, Churchman; ck. 2, Mills; 3, R. Sweisfurth; 4, Phelps; hen 2, Phelps; 3, Bateman; 4, Booth . Blue chequer, ck. 1, hen 1-3, Mills; ck. 2-4, hen 4, Bateman; ck. 3, R. E. Wilson; hen 2, H. M. Pancoast; bred 1907, ck. 1-2, Mills; 3, hen 1, W. K. Nester; ck. 4, Wilson; hen 2, C. M. Stanford; 3, Egbert Nutter; 4, Bateman. Yellow, ck. 1-2, hen 2, Pancoast; ck. 3-4, John Shaffer; hen 1-2-3, C. Carroll Kempton; bred 1907, ck. 1-2, hen 4, Nester; ck. 3-4, hen 2, G. H. Kerst; hen 1, Pancoast; 3, Shaffer. Red, ck. 1, Stanford; 2-3, hen 2-4, Kempton; ck 4, H. & J. G. Smith; hen 1, Pancoast; 3, N. J. Cole; bred 1907, ck. 1, Kerst; 2, Smith; 3, hen 2-3, Kempton; ck. 4, Stanford; hen 1, Shaffer. Black, ck. 1-3, hen 1, Cole; ck. 2, H. E. Edmonds; bred 1907, ck. 1, Edmonds; 2, hen 3, Booth; ck. 3, Churchman; 4, hen 1-2, Cole. White, ck. 1-4, hen 1-3, Smith; ck. and hen 2, Booth; ck. 3, Mills; hen 4, H. R. Smith; bred 1907, ck. 1, H. R. Smith; 2-4, hen 1-4, Booth; ck. and hen, 3, L. W. Norton; hen 2, H. & J. G. Smith. Any other color, ck. 1, H. & J. G. Smith; 2, R. Gibbs; bred 1907, ck. and hen 1, Gibbs; ck. 2, Pancoast; 3, hen 2-3, H. & J. G. Smith. Blue, blue checquer, silver or grizzle, bred 1906, ck. and hen, 1-2, Churchman; ck. 3, Bateman; hen 3-4, Mills. White, red, yellow, black or any other color, bred 1906, ck. 1, H. & J. G. Smith; 2, Pancoast; 3, H. R. Smith; 4, hen 3, Kempton; hen 1, Kerst; 2, Cole.

RUNTS—Blue, ck. 1-2, hen 1, B. C. Evans; hen 2, E. Cowles; young, 1-2, Evans. Black, ck. 1, hen 1-2, Evans. Any other color, ck. and hen 1-2, Evans; ck 3, C. E. Chapman; hen 3, L. L. Swam; young, 1-2, Evans.

Meeting of the American Jacobin Club

By F. W. Gorse

The annual meeting of the A. J. C. was held at New York, Friday evening of December 20th. No business other than the election of officers. Mr. Eby was elected President; Mr. Forshay, Vice-President; F. W. Gorse, Secretary-Treasurer.

It is the wish of the writer that the year of 1908 show some advancement in number of members, so that the interest in the Jacobin will be spread over a greater territory, it being confined from a show standpoint to Pennsylvania, New York, New Jersey and Massachusetts. We have members in the West, and we should have something doing for the club and the bird in that territory.

That the Jacobin is one of the most classy of pigeons there is no doubt. To the fancier who is in to-day and out to-morrow, he is not the bird, but to the student and lover of producing a bird of extreme quality, there is a life work ahead. While we have to-day some of the most remarkable specimens living right here in America one cannot doubt; all of which goes to show we can breed as intelligently here as anywhere, we know what we want and are going after it. The day of a second rate winning at our club show is past, and many of the best on the other side had to give way to home bred birds, notably so in Reds, a Dairy winner of 1906 being unplaced.

With the exception of one bird—a Yellow—I do not recollect a single imported bird as winning (and there were many shown). My reason for this effusion is—that while the Jacobin is a very difficult bird to breed to perfection, we have shown that we are just as adept at producing the best, as anyone, and to the real fancier he is the bird par excellence, and to those who are looking for a grand bird, and good company (no boquets), we extend a cordial invitation to join our club.

I am very sorry to hear of our Mr. Hoskins again meeting with a loss of his best birds in their return from the New York Show, he losing thirteen birds, and one nearly dead at the time of writing. While this is a fearful loss(and all will extend their sympathy to Mr. Hoskins), we must support the shows if we are to advance, and again let me caution all—whether Jacobin fancier or otherwise—who ship pigeons to shows, that the baggage cars are all heated by steam, the steam pipes run along the side of the cars, and all packages are placed on the side which brings them against the pipes. The colder the weather the more the passengers howl for heat—the passenger cars being in the rear of the baggage cars, the steam to reach them from the engine must go through the baggage car, consequently figure on your birds being placed near steam pipes, and only allow for birds on one side of a box. Never ship in a two sided box, for if you do one side will be placed up to the pipes and death to your birds, if they cannot get away from the intense heat, will be the result. Give your birds plenty of room, 12x12 by 10 inch high is a safe box, entirely open in front with a flap made of canvas over the front to keep out the weather. Be sure and tack on a card, informing the company to **keep them away from steam pipes,** and my opinion is you have forstalled any careless express messenger. Always figure on the express messenger doing what he shouldn't do and provide as far as possible for it, and you will reap this reward—in birds arriving at shows and home again in much better condition than would be the case if shipped in smaller compartments.

NISEQUOGUE STUD
White **FANTAILS** *Black*

A most select collection. Winners in England and America.

WILLIAM RUST & SONS,
Dept. J. New Brunswick, N.J.

Warren, Pa.

The Seventh Annual Exhibition of the Warren Poultry and Pet Stock Association was held December 16th to 20th. The show proved a success in every way, a large store being secured on the main street helped the attendance considerably, and brought a smile on the faces of the management as the crowd kept coming. Four hundred birds filled the coops and the quality was gilt edge. In many of the classes the winning birds were of extraordinary type, notably White Wyandottes, White and Brown Leghorns. In a class of thirty-eight Wyandottes the winners were very true to type and showed correct Wyandotte shape and color. The lack of space in this issue of the FANCIER forbids us to write up the different classes in detail, but a blue ribbon won at Warren in the American and Mediterranean classes was a guarantee that the owner had quality equal to many of the large shows and many of the winning birds could have given a good account of themselves at some of our large exhibitions.

GEO. W. WEBB.

AWARDS

PARTRIDGE PLYMOUTH ROCKS—Jas. Haslet, 1-2 cock, 1 pullet, 2 hen; F. A. Huff, 1 hen.

Milwaukee, Wis., Dec. 24th, 1907.

Leonard W. Lott & Co.,
108 Fulton Street, New York.

Dear Sirs:

I have only been home from the Southern Shows a few days.

Have had a very successful season, showing from Canada to Texas. Have been away since July 7th.

I find The American Fancier and have read a few of them with great interest and wish to say that they are just what the busy Poultry Fancier needs. News boiled down and warm.

Wishing you success and a Merry Xmas and New Year, I am,

Very truly,
W. A. HOYT.

* * *

Many successful breeders do not use charcoal, while others keep it always where the chicks can get it.

ONE YEAR Subscription to any 50c Poultry Paper . . Free

Have two friends subscribe to *The American Fancier* at the regular subscription price, 50 cents each, and send us the $1.00 and we will give you FREE a year's subscription to any 50 cent Poultry Paper published in the United States. HENS TEETH ARE NOT SCARCE

The question is—What kind to furnish. You can't afford anything cheaper than **Maka-Shel Grit.** Keep it before your fowls, scatter it in the litter. They'll find it. It is white, sharp, clean, uniform in size, free from trash. It's economical because it lasts so long. It keeps its edges and grinding points till dissolved. Contains Lime, Soda, Iron, Magnesium. All these help to build up flesh and bone, and make eggs. **Maka-Shel** supplies what food does not. Send **50c.,** coin or stamps, for 100-lb. bag **now.** Booklet, "Hen Dyspepsia," and sample—**free.**
EDGE HILL SILICA ROCK CO.
Box I, New Brunswick, N. J.

EGG MAKING

is a hen's natural work. Cut bone is the raw material she needs to make her lay an egg a day. A **CROWN BONE CUTTER** will prepare the food from scrap bones quickly, easily. Write for catalog—tells about the Crown.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st [illegible] 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2[illegible]3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1[illegible] 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

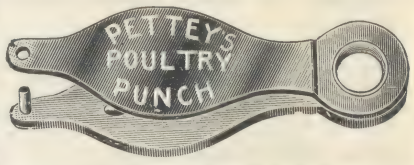
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.



No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

resident, American Houdan Club, From 1900 to 1907.

Spring Time, Chick Time

Do You Know How To Feed To Raise Them?

Most little chick troubles, such as Indigestion, Diarrhoea, Sour Crop and Bowel Troubles, are brought on by improper feeding. These are the things that cause such frightful losses. The most successful poultrymen agree that they cause nearly all the deaths.

DARLING'S CHICK FEED

enables you to avoid these little chick complaints and the high death rate. It is a clean, wholesome product composed of the best selected seeds and grains and sweet, finely ground meat products. It is entirely free from sweepings and worthless seeds. It contains all the strength and nutriment of the perfect grains, and is not to be considered as in the class of by-product chick feeds from breakfast food factories which have had the best part of the grains taken out.

It Is The Best Feed Because

—it is adapted to little chick needs
—chicks digest it rapidly
—it is reduced to proper size
—it contains the right amount of grit
—it starts chicks right and induces rapid growth
—it is rightly balanced to produce best results.

PRICE—$2.50 per 100-lb. bag, F. O. B. Cars, Chicago or New York, Cash with Order.

Darling's Laying Food	$2.00	Darling's Beef Scraps	$2.75
Darling's Scratching Food	2.00	Darling's Oyster Shells	.60
Darlings' Forcing Food	2.00	Darling's Mica Cristal Grit	.65

(Prices are for 100-lb. bags, F. O. B. Cars, Chicago or New York. Cash with Order.)

Send for Catalog of all Darling Foods and Supplies. Also copy of booklet "Fill the Egg Basket," which is a complete guide to feeding for egg production. Both free. Address nearest office.

How to Get Eggs in Winter

By W, E. Samson, Forest City. Pa.

This has been a subject that has puzzled many a mind, and many a page has ben written on it expressing as many methods, and while the writer may not advance any new idea, yet, we will endeavor to give our experience which has worked to our entire satisfaction. In the first place we must have the stock to begin with. We would not think of getting "Winter eggs," were we to start with late hatched pullets or hens that had not moulted until the cold weather had set in, or hens that had been kept until their usefulness were past, or that showed any signs of disease, but vigorous, healthy stock.

These should be housed in their Winter quarters by the 1st or middle of October, in good, comfortable houses, not to warm, in fact we do not believe in too warm a house, but free from draft and darkness, with the open front or curtain scratching shed, and if needs be, a curtain in front of roosts. Never allow your house to become so close that frost forms on the ceiling or sides, or you surely will have trouble. We believe the scratching shed or department just as essential as the roosting room.

The manner of feeding and the amount of scratching material depends a great deal on the time the attendant has to give to the flock. We have found that the best results are obtained by often feeding in small quantities, thus using somewhat less scratching material. If one cannot feed often, then use more scratching material and bury the grain deeper to *keep them busy.* They must have exercise; it is beneficial to health in more ways than one.

We prefer to keep the pullets and hens separate, as the hens take on fat quicker than the pullets, and in most cases do not or should not have as much food. It is a good thing to visit their houses by night while on the roost and examine them to see if they are becoming too fat, and regulate their feed accordingly.

Water

A frseh supply should be kept by them at all times. It is surprising to see how much they will drink when they have the opportunity. We prefer the founts made of the same material as our stone jars. When filled with warm water in the morning they will not freeze for hours in an ordinary house even in zero weather, and are so constructed that they keep pure and clean and do not admit of getting the wattles wet.

White Cochin Ckl., 4 Months Old,
Owned by D. C. Peoples, Uhrichsville, Ohio.

Feeding

There should be kept, each in its seperate box or hopper, charcoal, grit, oyster shells and cracked bone at all times. For a grain ration to use in the scratching shed, a mixture of about equal parts buckwheat, whole wheat, oats, barley and cracked corn, or it may be given without the mixing, and at night, or if more convenient, a mash, composed of cut clover, steamed an hour, to which add about equal parts of corn meal, wheat, brand and wheat middlings, add to each quart of meal, brand, etc., ½ pint of animal meal or beef scraps, with a litle salt and pepper to season same, and about twice a week a feed of green cut bone or scrap from the butcher shop.

Green Food

Chopped cabbage, onions and turnips and mangel wurzels cut in two, lengthwise afford an excellent variety.

When we have fed as above described, governing the quantity by the condition of our flock, not allowing them to become too fat, we never missed getting a good supply of eggs, even in the coldest month in the coldest part of the old Keystone State, at an altitude of over two thousand feet. A hen that will not lay when thus treated, we consider there is something hereditary or internally wrong, and should be disposed of.

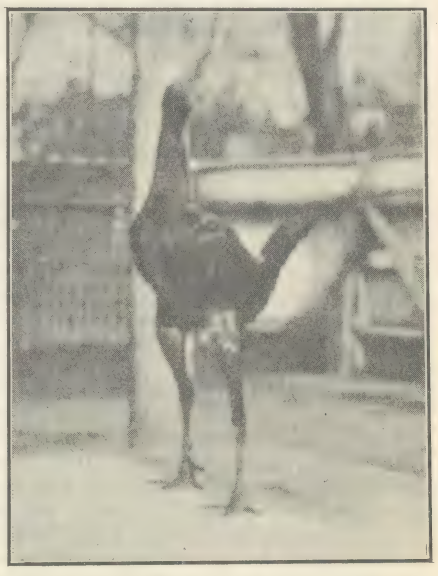
Judges and Judging

By F. D. E. Stowe, Brattleboro, Vt.

There is a great deal said and written about poultry judges and judging at shows. As a whole, there is more incompentency than dishonesty in judging. Good judges, men who have the happy faculty of sizing a bird up as a whole, giving proper weight to the essentials, is the rarity. Of course, a bird that stands out from his class can be picked out by any fancier, but when the birds are nearer on a par, then the test of judging comes. This suggestion brings to mind the controversy of the comparison and score card system of judging. It seems to me, however, that the main point is whether the judge is competent. From the judge's point of view, I do not blame him from leaning towards the comparison method, for he has to give no reason for his judgment. A score card is a tell-tale and is valuable or not, depending on the genius or lack of ability of the judge. If you value the judgment of a judge and are accustomed to his manner of "cutting," a score card does tell the judge's estimate. What breeder does not like the estimate of a good judge of his stock? Beyond a doubt the practice of scoring birds is a good training for a judge, though he judges by comparison, for it drives him to give reasons and measure the defects, not rest on a raw guess.

The inclination is to appoint most any one a judge that has succeeded at the shows. There seems to be some appointed simply as drawing cards for attendance, without regard to the exhibitors. The general judge will be more or less weak outside his own specialities; hence I am saying nothing against specialty judging. I know of one breeder who excels in raising stock, and another who is far his superior in ability to properly weigh defects. He has the judicial ability that the first has not. No "pull" should appoint the first over the second.

It is easy for an exhibitor to feel that a judge has erred when one of his favorites is beaten by some strange bird that does not suit his individual taste so well. Before the judge is skinned, however, the defects of each section of each bird must be measured. Disappointment and prejudice form a mixture with which we flavor our judgment full often. Further I say not at this time.



Silver Wyandotte Owned by W. E. Samson.

Raising and Rearing Game Bantams

I find that to successfully raise them, they must be put into pens and not allowed to range. I have a building, about 4ft. by 5, with a covered run 4 ft. by 8 long, and put the Bantams into pen as soon as they are hatched. Use about four to five inches of sand on floor and clover blossoms on top of sand. Give them hard feed and make them scratch for everything they get by throwing the feed into the clover blossoms. They will not have their nice plumage as early, if penned, as if allowed free range, but it will come in a little later, and you will hardly loose any, whereas when at free range you will lose about one half.

Danbury and Lenox Shows reported in February 15th issue.

The Boston Exhibition

The twelfth annual exhibition of the Boston Show was opened January 14th, 1908. Apart from the question of popular patronage, the show is, in many respects a record one. The quality of stock displayed was on a whole very fine.

Boston is a fixture we look forward to year after year, and this year again brought together a great many fanciers from far and near.

The penning was, of course, done by Spratt's Patent and Mr. Rackham had everything in perfect order.

The hall, although not as grand as Madison Square Garden, is spacious and affords ample room to display the birds to advantage.

The judging was nearly all completed the first day. The judging in some classes was hardly up to what it should be at such an exhibition.

It appears every year there is more discussion among the fanciers at our prominent shows. To say good judges are getting scarce is putting it mildly.

The officers of the association were President George B. Quches, Vice-President John Lowell, Supt. of Poultry T. Farrer Rackham and W. B. Atherton, Secretary.

In the single classes 2,039 specimens were penned with 77 exhibition pens.

Light Brahmas came first in the catalogue with 62 entries and 7 pens, against 35 entries and 3 pens at New York the month before. The quality throughout was a much better lot than at Madison Square and was ably handled by Mr. C. A. Wheeler

In Buff and Dark Brahmas the number of entries, also the quality, was about the same as in New York.

Cochins—Little to choose between the two great shows.

Langshans—New York, we think, had the better display, but only a trifle.

Barred Rocks—Boston 92 entries and 8 pens against 253 entries and 36 pens at New York. Although Boston brought out some really fine birds, it was not up to the standard set by Madison Square Garden.

White Rocks—108 and 7 pens at Boston against 156 and 19 pens at New York.

The quality was fine, and showed improvement, especially the youngsters.

E. H. George placed the awards and had a hard task.

Buff Rocks, numbers about equal at both shows. Henry R. Ingalls, judging, got through his day's work in good style.

Partridge and Silver-penciled—New York was away ahead, both in number and quality.

Wyandottes at both shows made grand displays. Boston had 52 Silvers, 24 Goldens, 122 Whites, 103 Buffs, 29 Partridge, 25 Silver Penciled and 72 Columbians, while New York had 48 Silvers, 59 Goldens, 135 Whites, 21 Buffs, 38 Partridge, 23 Silver Penciled and 79 Columbians.

The Buffs from very weak classes at New York developed into a grand display at Boston; 103 entries filled the aisle. The quality was the best seen in years. All the prominent breeders in the ring made the competition very keen. The classes were very well handled.

Rhode Island Reds were out in fair numbers, but not up to New York, which hardly could be expected as the same judge officiated. Quite some dissatisfaction was heard at the Garden and consequently many did not care to make their entries for Boston.

Dorkings were a much beter lot at Boston than at the Garden and we were pleased to see them show in such goodly numbers.

Orpingtons made a fine display, but hardly up to New York. It seems each year this variety attracts more and more attention.

Leghorns entries numbered 74 Browns, 35 White, 19 Buff and 16 Black in single comb classes at Boston, while at Madison Square Garden there were shown 69 Browns, 125 Whites, 42 Buffs, 23 Blacks.

The quality was not so good at Boston but a number of good birds were penned. Miss Sophie Pitchlynn officiated in the single comb brown classes with the exception of the pullets and handled the classes with the confidence of one who has bred them. Unfortunately Miss Pitchlynn was taken ill and Mr. C. A. Ballou judged the remaining class.

The Game and Ornamental Bantams were far behind what they should be at a show the size of Boston. We cannot understand why the large breeders don't send their birds to more than one exhibition.

In England all breeders will meet at perhaps ten to a dozen shows in a season, but we are sorry to say they don't in America.

Buff Wyandottes and Buff Plymouth Rocks at Boston

By Henry R. Ingalls, Judge.

The Buff Wyandotte class at Boston was a record breaker in point of numbers and quality, there being twenty-two Cocks, twenty-two Hens, twenty-eight Cockerels, twenty-nine Pullets and six pens—a toal of one hundred and thirty-one birds. It was a fine class in numbers, and as to quality, it is safe to say that it was the best ever shown in the history of the breed. There was little choice among the winners, they all being birds of extra fine quality all through. The Buff Wyandotte Club held its annual meeting at the show, and very likely this is what brought out the large entry. The members of the club are to be congratulated upon their fine showing, it is the best advertisement the Buff Wyandottes have had in a long time, and is sure to do them much good. The following is a brief review of the winners:

COCKS.—First—Is a very large bird of fine style for so large a bird, for he is in good condition and shows up well in the coop; very nice shade of color, and quite even in surface, strong in under color; very clean wing and tail; the shape of his back could be improved, but he is a good Wyandotte; comb is a trifle heavy and lobes are weak; he stands out as the best bird in his class and wins easily.

Second—Is a bird of lighter color and not so large; he is even in surface color; clean in wing and tail; fails somewhat in the shape of his breast; has nice comb and eyes, but his lobes are weak.

Third—Is about the same color as second, but not quite so even; not quite so strong under color; is low down, nice shape, good head, good buff tail; a very nice bird.

Fourth—A very nice shaped bird; quite sound in color all through; not quite even, as he fails over the wings; very neat comb; he is shown in better condition that those above him.

Fifth—Very similar to fourth, in fact there is little to choose between them; he is just about the same size, shape, color and head points and shown in fine condition; they are a pair of very fine birds, and a credit to the bred.

HENS.—First—Without a doubt the best Buff Wandotte female ever shown; she is so good that she not only wins first, but all specials for color and shape; she is large, very fine in shape; very sound and even in color; clean in wing and tail, with fine head points; she is so good that she could hardly be beaten.

Second—Another crack-a-jack; fine size, shape and color, some darker than first; not quite so good in shape, but still very close up; she is shown in fine condition.

Third—A fine Hen, nice shape; good, even color; comb is a bit coarse, but not much; sound in lobes; a very fine hen in all ways and hard to beat.

Fourth—Is another beauty; very sound and even color of nice shade, a trifle long in back and pinched in tail; she is so good in all ways that she is entitled to special mention.

Fifth—This hen, in color and shape, is almost equal to first, but not quite so large; she showed up so pale in lobes that it put her back to fifth place; a beauty.

COCKERELS.—First—A buff bird of sounder and more even color in all sections would be hard to find; he is also very fine in shape, extra good in head points, neat comb, bay eye, and sound lobes; he wins the $100.00 Challenge Cup for best male, and all color specials.

Second—Another grand bird; very nice shade of color, even all over; he fails some in under color of hackle, and is a trifle too lofty, and straight on the breast; he and first are a pair that are very hard to beat.

Third—A bird of nice color, style and shape; clean buff tail; he has a very nice head, with close fitting comb, bay eyes and solid lobes; shows up nicely in the coop, and is in good condition.

Fourth—A low down, blocky bird, winning special for shape, althought a triffle flat in breast, and tail feathers are too long; he is not quite even in color, being some darker over the wings and has some light lacing on breast; lobes are a bit weak; very good comb.

Fifth—Is smaller, lighter color, nice and even; fine shape and style; has a very fine head; a beauty in all ways.

PULLETS—First—A young one, not quite matured, but a fine one in all ways; solid buff, fine even color; low down with broad back and well rounded breast; very neat and sound in head points.

Second—Another very fine one; deep, rich color, even all over; good head points; a very fine bird, shown in the pink of condition and fit to win.

Third—This is a good one, too; even color; good shape; very good head, as she has small comb, bay eye and sound lobes; shown in the finest of condition.

Fourth—Another sound one in color, solid buff; fine shape; good in head points; a beautiful bird, and a hard one to beat.

Fifth—A very neat pullet, not large; light, smooth, even color; good head, except that lobes might be a bit better; five such pullets never met in one class before.

PENS.—First—A well matched pen in color, clean and even; neat in head points in the females; male some coarse in comb; a fine pen.

Second—Another good pen; not matched in color quite so well as first, but are all good ones; male somewhat up on legs; but fine otherwise.

Third—About like second in all ways except that male is a little darker in color; he is a fine bird for shape.

Fourth—A good colored pen of birds; they are good size and color; good shape, but are coarser in combs than the other three.

Fifth and Sixth—Are not up to the others in any way, but are still good pens of Buff Wyandottes.

Buff Plymouth Rocks

This class was not so large as the Buff Wyandotte Class, but it was a good one, and contained some fine birds. Buff Rocks runs quite a bit to coarse combs and poor breast shape in males. They are just like the Buff Wyandottes in this respect. Buff fowls must be popular if one is to judge by the entries of them at this show.

COCKS.—First—A nice, even colored bird, fairly good in shape, except that tail is too short, and there is not enough of it, and it is carried too high; sound in wing and tail; comb small. but not right in shape; he wins because he is sound under color.

Second—A large, fine shaped bird, light shade, not quite even in surface, under color shows white in some sections, white in wing, main tail feathers and sickles; coarse in comb; a very fine all around bird.

Third—A very showy bird of good shape and color, with a good comb; he is well trained and shows himself well in the coop.

Fourth—Is a good color, except that it is not quite even, being darker over the wings; shows some white and has some broken feathers in wings; legs are dirty and show up bad.

Fifth—A good colored bird and sound, but is not a good shape, and has a poor shaped tail and a three point comb.

HENS.—First—A large one with very nice, even color; good shape, except that she has an old hen's fault, too fat and shows a cushion on her back; low comb and bay eye; clean buff tail and wings.

Second—A grand hen; light, bright, even buff surface color, but under color is weak; has dark tail and a poor comb; she is good shape and a hard bird to beat.

Third—Very even in color all over, good shape, good head; she has dark in tail in plenty, but is very sound colored hen otherwise.

Fourth—A large hen with the best of shape; her color is not just right on the back, as she shows faded feathers; neck hackle is short and some ragged.

Fifth—A big light colored one; color is even all over; tail some dark; comb is poor; beak and legs are light in color.

COCKEREL.—First—A big one; not in the best condition, as he is thin in flesh and does not show up good; he pulls his plumage down tight to his body and stretches up and tries to jump out of the top of the coop; he is one color from end to end, buff to the skin, clean buff tail and wings; poor comb and weak breast; he wins the $100.00 Challenge Cup for best male, and all color specials.

Second is a late chick with quality to burn and a little more age could win hands down; he is a good shade of color, but has so many chick feathers in him that it makes him uneven; his tail is short and has no furnishings; comb is good; he wins all the shape specials.

Third—Is a big one with good, bright color; good shape, but is very coarse in comb; he is very much like second cock.

Fourth and Fifth—Are good birds; there are several good ones left out, as there must be in such a class.

PULLETS.—First—The star of the whole lot; a large pullet with the best of shape and color; she is even from end to end, has a small comb and red eyes; her legs are smooth and yellow; she shows up in fine shape and wins shape and color specials in females.

Second—Is another good one; true Rock shape, good size, fine even color, and a good head.

Third—Is lighter in color and strong in under color, but she has gone by her best as she shows dead feathers, and is pale in the head; a little out of condition.

Fourth and Fifth—Are good ones; several very nice birds are left out; there are not prizes enough to go round.

PENS.—There are only two pens; first are a lot of very large ones with the finest of shape and color, but they all have the coarse and unsightly combs too often seen; second pen are better in combs, but not near so good in color.

Bantams at Boston

By James Glascow.

The display of Bantams at Boston while containing many high class individual specimens was a very ordinary lot taken as a whole and in Game Bantams especially with one or two exceptions quality was sadly lacking. Questionable, disqualified birds were awarded first prize at this one of the premium shows of the country, which all fanciers must admit is detrimental to the welfare of the Bantam fancy. It is up to the Specialty Club to join hands with the Boston Association and try to make this show equal in number of entries and also in quality to the best in the country.

BLACK RED COCKS—1st showed quality but far too large.

HENS—1st very trim, good station but off in color.

COCKERELS—1st only fair. 2nd should not grace a show pen.

SILVER DUCKWINGS, HEN—Nice and small, fair bird.

COCKEREL—The winner, a very good bird.

PULLETS—1st only fair, lacks the reach necessary for an exhibition Game Bantam.

RED PILE, COCKS—1st nice top color, good reach. 2nd, best in the class by far. 3rd, too big.

HENS—1st, wins, fair bird. 2nd, very close up.

COCKERELS—1st, small, poor hocks. 2nd, reachy and that is all.

PULLET—1st, indeed luck to win. 2nd, should have been 1st and is a fair bird.

BURCHINS, COCKS—1st, not in it with 2nd although the 2nd had seen its best days and is still a good bird.

HENS—1st, wins easy. 2nd, absolutely no quality.

COCKERELS—Toss up between the two. Little to choose. Both ordinary birds.

PULLETS—1st, laced in back. 2nd, we like the better.

WHITES, COCKS—1st, wins although by far too large. 2nd, much long in wings.

HENS—1st and 2nd, well placed, both birds are fair quality, nothing startling.

COCKERELS—1st, lots of leg, plenty of style. 2nd, very poor tail and only poor in shape.

PULLETS—1st, very neat and reachy, the best of the Whites. 2nd, also a good one.

BLACKS, COCKS—1st, should have been disqualified.

COCKEREL—A promising bird and the best of the Blacks.

GOLDEN SEBBRIGHTS—Only a fair lot, while the best of the classes was the cockerel, a very clean-tailed bird and very good type. The 1st Pullet was off in breast lacing.

SILVERS—Only a fair lot and nothing startling in the classes. The same can be said of the Rose Comb Blacks with exception of the Hen, which was easily the pick of the lot.

The White Rose Combs and Buff Partridge and White Cochins all contained 1, 2 and 3 in a class of very ordinary quality, far from what they should be at such an exhibition.

BLACK COCHIN, COCKS—1st, wins easy. 2nd, rightly placed. 3rd, had a pencil tail and 4th, by far too big.

HENS—1st, wins. Good color and shape. 2nd, big but good. 3rd, lacks lustre and the 4th, much too long in back.

COCKERELS—1st, a good one, good shape and color. 2nd, very promising. 3rd, fair. 4th, could have been 2nd, a very nice bird.

PULLETS—1st, wins easy, good shape and color. 2nd, far too big and 3rd, too long in back. 4th, very poor in head.

LIGHT BRAHMAS, COCKS—1st, wins. 2nd and 3rd, only fair birds.

HENS—1st, nice bird, good markings, very good shape. 2nd, a good all round bird. 3rd, too big.

COCKERELS—1st, wins easy. Good markings and shape. 2nd, by far too narrow. 3rd and 4th, very poor quality.

PULLETS—1st, small, very poor in wings. 2nd, we like best, good wings ,good shape a little bit large. 3rd, ticked on the wings and foul on back. 4th, only fair. The Japanese Bantams averaged about 3 or 4 to a class and nothing alarming was seen, with the exception of the Black Tailed Japanese Cock which we think was the best variety Bantam in the show. The winning Polish Bantams were very good in quality and we notice that one exhibitor is still in love with the barred rock Bantams of which he showed a few fair specimens.

Orpingtons

By George J. May.

The classes of Orpingtons at Boston this year equal, if not exceed any show, even at Madison Square Garden. To the writer, this is most gratifying, as it is very plain that no breed has become more popular than the Orpington. I think the day is quite near when the White will be as great a favorite as either the Buff or Black. One thing that requires immediate action is to not sacrifice shape for color in Buffs, which is what is now being done, especially in the males. I maintain, no matter what the breed, let shape be the very first consideration. There are several males out this season that with yellow legs would make good Buff Rocks; this, of course, is a great mistake.

BUFF ORPINGTONS—In this class there were several birds shown from Canada, and they certainly do their owner great credit, particularly the 1st Cock. I doubt if a better one has ever been penned, his only fault, a little off on breast.

1st, a very nice Cock, well shown, beautiful, even top color, pure white legs; fails only on breast; not seen at New York. 2d, good, even color, but very poor shape legs, rather red, but still a useful bird. 3d, the 2d Cock at New York, better shape than either above him, but a little warm in color and fails in neck hackle. 4th, good in shape, low down, but two shades of color; legs very red and dirty. 5th, very good in shape, but very red in hackle. 6th, only a fair specimen.

HENS—1st, a very large Hen, good, even color; legs very white, well shown; same owner as wining Cock; a new one this side. 2d, very nice, even color; beaten in size by winner; one of the New York winners. 3d, Looks like the 1st New York Hen, might have easily been 2d; a very even color, low down and good Orpington type. 4th-5th, same owner as 2d-3d, a credit to their fair owner, as all are well shown, and are an nice, even color.

COCKERELS.—1st, another Canadian; a wonder for eveness of color; a real good bird; a little off on shape his only fault. 2d, the 2d Cockerel at New York; by far the best Orpington shape in the class, but well beaten on color by winner. 3d, another from Canada; very rich, golden Buff, very poor shape, and with a Leghorn comb. 4th, a rich, even color, but beaten in size. 5th, small, but good type; handles well; a useful Cockerel. 6th, good in shape and low down.

PULLETS.—1st, the 2d Pullet at New York; much improved, very even color and good in size and shape. 2d, same owner; very like winner, but a little larger. 3d, a very nice, even colored Pullet, well shown, good in size and shape. 4th, a large Pullet, good in shape, but a little mixed in color. 5th, only a fair specimen; looks over shown. 6th, a very young Pullet, but nice color.

BLACK ORPINGTONS — 1st, a most typical shape, very low down and good size; a great winner, scored 96½ as a Cockerel by T. E. Orr. 2d, a wonder for color, rich beetle green, but beaten in shape by winner. 3d, good in size and shape, but beaten in color. 4th, loooks like a Willow Brook Winner; good in shape and color. 5th, good in color, and very good shape. 6th, a very large Cock, somewhat coarse, but very good color.

HENS—1st, the New York winner; a very fine Hen, very low down and good in color and shape. 2d, a very nice Hen; good size and color, will improve by another year. 3d, good in size and shape, but dull color. 4th, a useful Hen, with a very fine comb. 5th, good in shape, but off in color. 6th, good color, but poor shape.

COCKERELS—1st New York winner in new hands; a very fine Cockerel; will make a fine Cock with luck; he is good in shape and color. 2d, very nice color, good size and shape, but only a baby; will improve with age. 3d, good color, very short in back and fair shape. 4th, good size and shape, but only fair color. 5th, only a fair specimen; fairly good in color.

PULLETS—1st, another from Canada; good shape and size, but dull in color. 2d, good color and shape, but beaten in size by winner. 3d, we missed. 4th, good in size and shape, and fair color. 5th, a good pullet, but lame, or would have been higher up. 6th, only fair shape; very good color.

WHITES, COCKS.—1st, good in size and shape; very pure white, quite free from brass. 2d, same owner; equal in every point, but size, but still our choice; the New York winner. 3d, good in shape, a little too long, or otherwise very useful. 4th, very good color, but poor shape.

HENS.—1st, real Orpington type; good size and color; a very nice Hen. 2d, another good Hen, quite White, but beaten in shape. 3d, a good White Hen; neat comb and good shape. 4th-5th, nice color, but both beaten for size.

COCKERELS.—1st, pure White; good in shape and size; nice type. 2d, good color, equal to winner; bar in comb his only fault. 3d, quite young, but still a useful bird; very good color. 4th, small, but very good color and shape.

PULLETS.—1st, nice shape and color, but not very large. 2d, good shape and size; quite useful. 3d, small, but good in color and fair shape. 4th, only fair; quite young.

LIGHT BRAHAMS had an entry of 62 birds, which was almost double that of Madison Square Garden, but when we compare figures, we must remember that the Paterson show hand an entry of 60. The 1st Boston Cock was grand all over, and way ahead of the 2d. 1st Hen was a good bird with a magnificent tail, and the 2d was in close competition, but her tail was not fully developed. 1st Cockerel was poor in type, and the 2d, with exception of poor neck hackle, was a much better bird. 1st Pullet was a grand bird, and fine in color and quite a little way ahead of the 2d.

PARTRIDGE COCHINS.—1st Cock a grand bird and stood well; while the 2d was almost his equal, with exception that he held his head too high.

THE ROSE COMB RHODE ISLAND REDS will be fully reported in the next issue, with the exception of calling attention to the Pullets, which in our opinion were wrongly placed. The 5th Pullet, we believe, should have received the 1st award, as the 1st, 2d, 3d and 4th all appeared inferior to her. The 2d looked to us like a better bird than the 1st, but not equal to the 5th.

SINGLE COMB BROWN LEGHORNS. This class, with the exception of the Pullets, was judged by Miss Pitchlynn, but on account of illness contracted at the show, Mr. C. A. Ballou placed the awards on the Pullets. The 1st Cock was a grand bird; it was followed in close competition by the 2d. 1st Hen stood out a winner. 1st Cockerel appeared in fine condition and was a great bird. In our opinion the Pullets were misjudged. The 1st was poor in shape and hackle, and in our opinion, should not have received a ribbon. The 2d Pullet did not meet with our fancy, but was better than the first. Three unplaced birds, we believe, were far superior to 1st and 2d. No. 1292 looked to us to be the best Pullet, but almost equalled by No. 1294, and even then, by some thought to be better than No. 1292. No. 1288 was in close competition with No. 1292 and 1294. The 5th Pullet looked to us like a Hen, but we could find no Pullet in any Hen coop to show a mistake in cooping.

BLACK MINORCAS.—1st Cock was a grand bird of fine color, and was correctly placed, although the 2d, we believe, was superior to the 1st in type only and very poor in comb and shown in poor condition, the 1st Hen appeared only a fair bird, and the 2d was nowhere her equal. 1st Cockerel was a grand bird, with find lobe. The 2d was in bad condition with bad tail. The 3d almost, if not equal to the 2d. 1st Pullet was a fine shaped bird, but with poor comb. The 2d was inferior to the 1st in shape, but beats in comb. The 1st Cockerel was a grand bird, magnificent color and the 2d was fine in shape, but shown in poor condition. 1st, 2d and 3d Pullet were all good birds.

Miss Sophia Pitchlynn, Judge at Boston.

One of the best known Brown Leghorn Specialists in America, whose female strain of Leghorns have captured many premiums.

Mr. Theo. F. Jaeger's Reply to Mr. E. H. Morris

Editor, AMERICAN FANCIER:

The January first issue contains a reply to some Notes out of my pen on Water Fowl. Mr. Edwin Evergreen Morris cannot force himself to think as I do, or for that matter, as authorities do, and is at his old free ad. game of belittling what others may have, or may have done and lauding that, which he happens to breed and considers the acme of perfection. It is a trait of human nature—and we all are subject to it at times—to think we have the best birds or know more of their breeding than anyone else, but it is very fortunate, indeed, that not more of the brothers in the feathered realm are as strongly endowed with this characteristic as Mr. Morris, for if they were, shows would have broken up ages ago and concerted actions in breeding for a type and the best would have become impossible. If all readers knew Mr. M. as I know him, a reply would not be necessary. Brother M. is simply unable to see the excellencies in others or other birds in looking at their shortcomings. If he happens to have birds of his own near for comparison, that in his opinion have not received all he wishes they should have received—and that is generally all that can be offered—woe to the unfortunate competitor. It is but natural for Mr. M. to fill in the time between shows by writing about what others may have done or left undone. This is consistent, and I admire this most excellent trait in Mr. M. If we could induce his consistent nature to turn into the channel of "do unto others as you would have them do unto you," instead of in "do others, before they do you," I am sure Edwin Evergreen Morris would become one of the best liked, most successful and best advertised Water Fowl Man in this, his land of adoption.

His parting shot at the Water Fowl Club or the International Water Fowl Association will loose considerable of its venom, when it is understood that the writer re-juvenated the Water Fowl Club and was its Secretary for five years and that I also was strongly active in creating the International Water Fowl Association.

The "imputation of something like fraud cast on English fanciers," conveyed in Bro. M.'s words by my late statement is far weaker than the proofs in similar cases. Mr. Van der Snickt says on Indian Runners and Rouens, both of them claimed time and again to be English products or perfections, "Behold how a duck very common in Holland, in Belgium and all through Northern France, arrived at the honor of being shown at Paris under an English label; while the same duck selected for centuries for laying and table qualities, had not a class, not even a name at the Hague, at Brussels and at Lille. It is a very unique case. The Rouen duck has been bred in England solely to gain prizes at shows; it does not posses a single one of the qualities necessary to make it an object to cultivate it. The English claim it as a duck, originating in England, and that the name 'Rouen' is not from Rouen, but is from 'roan.' As for the true original Rouen, the French Rouen, it is sometimes called tame duck of Normandy. Norman duck, pure Rouen type, dove colored Rouen, etc."

Again, he says, on Indian Runners, after reading an English book by J. Donald, who claimed that a drake and three ducks were procured from the captain of an Indian ship over fifty years ago, "The pamphlet tells nothing new, unless it be that the promoters of the sham 'Indian Runners' do not know, or feign not to know where to look for the new race which they have made an English race."

As the Blue Orpington duck, the Rouen and the Indian Runner, the East Indias are a child of the lowlands of Holland and Belgium. The only credit that English fanciers have tried not to capture, was for creating Lakenfelders, which they have forced on to Holland, when in reality they are a genuine North German product. Incidentally will say, that Lakenfelders spelled with a "V" is wrong, and this Dutch spelling may have misled them.

I admit I wrote in 1901, that the East Indias came from East India and Buenos Ayres. This fact is plainly seen in any copy of the Water Fowl Guide, which I at that time compiled for the Water Fowl Club. I based my statement upon the highest authority which I had met with up to that time, a countryman of Mr. M., the well-known Fowler. He states that the London fanciers received their birds from there.

Since that time I have met others, that have a right to be heard in the matter and lastly, but not leastly, my stay in the old country for the best part of last Summer and Fall, has granted me opportunities to investigate and find out a few things for myself. I do not need to cite authorities, where eyes have convinced. Will, however, say, to allay Mr. M.'s anxiety for light, that opinions differ greatly, as long as those opinions uttered have *never been to Holland.*

France calls the duck Labrador Duck, because it is supposed to have come from there. Certain sections of Germany—the East especially—call them the Bahia Duck, from the islands of same name; D. Wright claims Brazil as their home, and Fowler stands alone in proclaiming the East India Duck under that name, because she originated from the East Indias, so he says. Now Brother M., there is only one for the claim—Fowler—many against it. The great Frank Finn, F. Z. S., as an Englishman, you should know him, for his services to the Fancy stand alone in its class, says, "This breed—East Indian Duck—also called Buenos Ayres, though apparently with no reason in either case, resembles the wild bird, in form and power of flight, but should be smaller, in fact as small as possible, even down to two pounds." Again he says: "They are apt to show white feathers with age; but must say that I think it is a pity both it and the call ducks were ever invented, as they tend to mongrelise the Mallard, and no doubt to this cause is due the appalling collection of mongrels which disgrace our London Park waters."

Look up these words in the *Feathered World,* and verify them, please. A good cause can stand strong investigation.

I admit, secondly, that I wrote in 1901, that "the East India duck of America is an ornamental duck, pure and simple, and fully unlike the profit producing East Indias of the Dutch." This claim is as good now as it was then. What of it? Are we fanciers not always at it, shaping breeds and creating colors, and has the fact, that we, with English breeders in union, breed the little black duck for smallness anything to bear against the fact, that its original blood came from Holland, and is still bred there for profit? Give us time and a little material and we can make bantams out of turkeys, or turkeys out of bantams. Breed for that which you desire to perpetuate, and you will, in course of time, loose all other points, that formerly made the original blood original. If we have finally gained that point, or if we are on the way to gain it shortly, is that a reason why we should condemn the poor relation, because her blood made the new production aristocratic in the eyes of clever Japanese Commissioners?" No matter what we may make out of East Indias, we shall never be able to prove that they did not come from the Dutch, we shall never be able to glorify the *English* for the *breed,* when all its dorment *characteristics* were *borrowed* from the *Dutch.*

The editor of *Chasse et Peche,* Mr. Van Der Snickt, the greatest authority on races of ducks in the world, says in his paper, "We have the little black ones with black beak." "The little ones should have as much flesh as possible upon a light and nimble frame."

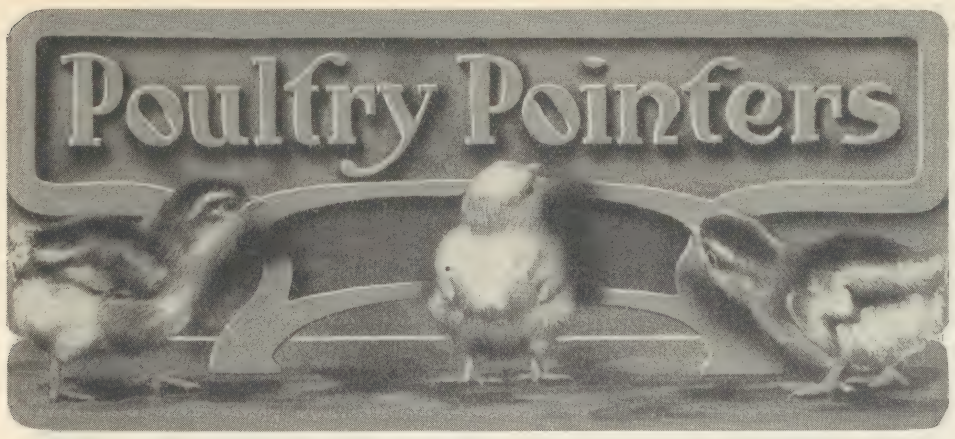
These little black fellows are alongside of others, differently colored, very common in the meadows of the Schledt, they can be found all over Belgium, Holland and Northern France. They are a cousin variety to Indian Runners, Bishop ducks, and any and all active duck tribes of Central Europe. It is true, they are not small enough, as we found them, to be an up-to-date East India, according to our understanding, but what of that, can we not get reduced size just as quickly as increased weight?

I wish Brother M. could have seen what I have seen; he might have changed front and adopted the giant Blue Ones with a blue beak and have an interesting fancy object with solid mercantile value combined. But, judging from the way he objects to the Blue Swedish, he may be afraid their color and his temper will harmonize too much and flare finally up in red. Every one to his liking, Bro. M. I favor the ducks of Indian Runner and Mallard make ups to pay me in flesh and eggs, which furnish joy through nimbleness and plumage; you for the small black ones and few eggs and the giant white ones, that judging from the birds seen from your yards at shows, have been stuffed out of all resemblances of true shape and size. You may have them. I am looking for vitality, vigor and producing quality, without sacrificing the true breed merits.

In order to cut out future free advertising for Mr. M. or myself, deem it best to say, that this is my final word in the matter, as neither one of us will be able to change the patent facts of duck history by belittling proven records.

In Reference to Mr. Morris

BOSTON, Mass.



Dear Editor:

Different articles from the pen of Mr. Morris have appeared in your publication, and although I agree with some and not with others, I congratulate you on doing the fair thing and publishing them. I believe the columns of a publication should be open to all. A number of breeders spoke about Mr. Morris, saying they object to many of his personalities, but agree with some of his writings, and all spoke highly of your impartial stand by printing his articles so we, your readers, can judge. Some think Mr. M., in writing these articles is working out a clever scheme for free advertising, and comment on the fact that he does not insert any paid ads. Mr. M. has loudly proclaimed that he will expose certain peculiar methods of placing the awards, yet this brave "hold-me-back let-me-get-at-'em," never does much more than boast or complain about his assistants on the farm, forgetting to send his best birds to the exhibitions. As you have published Mr. M.'s articles which have referred to other breeders, Mr. M. cannot complain about your publishing this.

Again congratulating you on your fairness of giving all free use of your columns, I am

Very respectfully,
A. T. MARSHALL.

It has been demonstrated at the West Virginia Experimental Station that Hens being fed with skim milk, produce more eggs. Skim milk was substituted for water in moistening the mash. As skim milk is a waste product in many sections of the country, the importance of feeding it to the hens is obvious. Pekin ducks also thrive well on skim milk and bran ration. With a little corn meal added, it makes a cheap and a very good duck feed.

A Sanitary Water-Pan

Invented by R. C. LAWRY.

Cornell University Agricultural Experiment Station.

Clean water is very desirable in the production of sanitary poultry products. It is important, therefore, to have a watering device which will keep the water-pan as free as possible from the dust and litter of the house and droppings from the fowls. A watering device must be easily filled and cleaned if it is to be of practical use. The water-pan here shown meets the above requirements in a satisfactory manner. (Figs. 103, 104 and 105.) The round, deep pan with flaring sides, is more easily emptied without injury to the pan in case of hard freezing. It presents a comparatively small surface to catch dust and dirt. The round, cone-shaped top prevents the fowls from roosting upon it. The openings in the side walls permit the fowls to drink from different sides at one time, and presents the smallest possible amount of opening for dust and litter to enter. The platform on which it stands, being 10 inches from the floor, is high enough to prevent the littler being scratched into it. It is found that where water pans are placed much higher than this, fowls do not drink as much water.

The water-pan and cover is made of No. 26 galavnized iron. It should not cost to exceed $1.40.

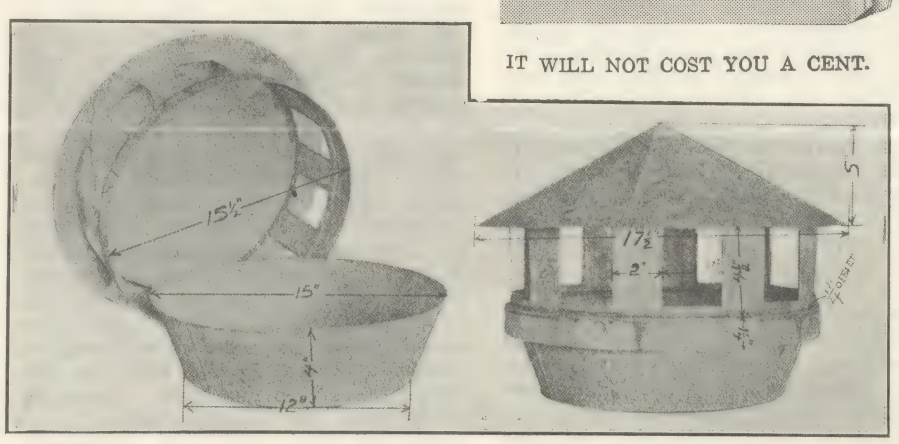


Fig. 104.—The Sanitary Water-Pan uncovered. Note flanged rim of cover.

Fig. 105.—The Sanitary Water-Pan, showing the small space open for entrance of litter.

How to Prevent Injury to Chickens in Foster-Mothers

As the chicken-rearing season will soon become universal, I wish to draw the attention of your readers to a very common cause of deaths in the young broods that are artificially reared in foster-mothers. Crushing and crowding among the young chicks is their favorite amusement when darkness is coming on, as anyone may see for themselves by watching how they nestle under each other, and, not content with under, for a change sometimes over each other, each one trying to get the best place; but the feeble are often smothered or trampled on by getting into corners and not being able to escape, and, even if not killed, are so crushed and injured that they never thrive afterwards. This all comes from having the warm, sheltered place in the foster-mother made with corners to it. It is a great mistake to have any corners; they should be all filled up by getting a thin piece of timber (such as is used for backs of picture frames) and by notching it half-way through its thickness every half-inch or so it will bend quite enough to round the corners off, tacking it here and there where midway between the corners it touches the sides; or by getting perforated zinc and cutting it in pieces and bending it to fill up the corners. This will give air also to those next the lining. In other words, endeavour to make the chamber like a band-box, and in this way we will not find any of our chickens flattened and dead in the mornings. The first foster-mother I used had not this tendency, as it had a large tank of hot water; the temperature was kept up by drawing off some and boiling it up, and then replacing it once in every twenty-four hours. There was no lamp to go out of order or to be blown out on stormy nights. Underneath the tank a piece of coarse flannel was tacked all round the edge, leaving it slightly loose; a few small pebbles or a few grains of buckshot were put inside on the surface of the flannel to make it hang down in centre. The chicks nestled under this as under a hen, and had plenty of air through the pores of the coarse flannel. A curtain of flannel, with slits in it to enable the chicks to go in and out, hung down to the ground all round from the edges of the tank.—A. H. T. DE MONTMORENCY, M. D.

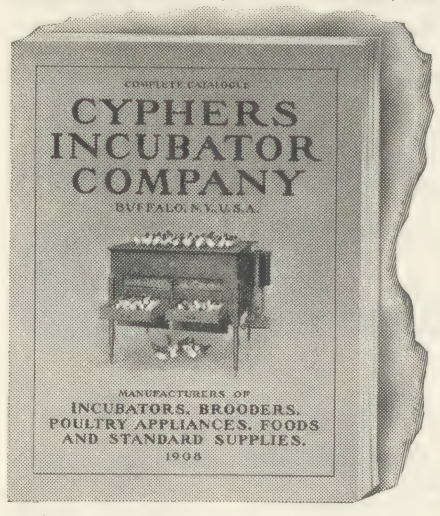
Winter Eggs

At this time of the year the problem that confronts most poultry-keepers is winter eggs and how to produce them. We know that there are more that don't get them than those that do, and in many cases the fault lies with the poultry-keeper himself. Almost any fowl will respond to good food coupled with good housing, but, to obtain the best results in the number of eggs produced, the strain of fowls plays an important part, this point being often overlooked by the anxious keeper. Like begets like to a great extent, and those that are breeding along the line of great egg production are the ones that are making the most in winter eggs (and summer also). Fowls can be mated that in time they will become phenomenal layers, and if, at the same time, they receive the food and care they merit, they will not only keep up that record, but will influence it upon future generations. It is natural for the hen to lay, but it cannot properly perform this provision of Nature if its tissues are wasted away through the neglect of proper food, or if suffering from cold and roup, the result of improper housing, or if constitutionally weak from poor digestion. Every care must be bestowed on our fowls if we desire to benefit by them in winter. Good, wholesome food must be given them, regular hours must be kept in feeding, fresh water, grit, and oyster shell must be bofore them at all times, invigorating exercise must be found them in the scratching pens, and, fed right, with the proper strain and housing, no one need fear failure in winter eggs and plenty of them.—*Feathered Life.*

Partridge Roxology is the knowledge of breeding Good Partridge Rocks

I have the good ones. Won last Rochester show first and second Cockerel, first and second Pullet and first pen. Authorities said: "The Partridge Rocks are by odds the most interesting exhibit at the show."

In birds I offer the second Cockerel and eight pullets $20.00. Eggs from best pen, $2.00 per 15; 30 eggs $3.00. Second Cockerel, Rochester, 1907, and 4 good hens, R. C. W. Leghorns, $7.00; need their room for my Partridge.



K. Nedball, Box 253, Pittsford, N. Y.

LITTLE THINGS WORTH KNOWING ABOUT POULTRY.

Whether you are buying or selling, get all the information you can. By so doing you Make Money or Save Money. In buying poultry or eggs would you not like to see the faces of the men you deal with—the leading breeders? The photograph of a man reveals his character. Pictures of their poultry farms may help you. Views of the biggest duck plants are always interesting. Sayings and doings of Government Experiment Station Experts and illustrations of their plants will help you. In buying an Incubator you should know how it is made; how long it will last; how easy it is to operate; how much it costs, and how it will hatch.

There are things in the poultry world you may never have heard of, such as the Cyphers Electric Hatching Machines, a new invention, but most simple. Just a case of hitch on your electric light wire and "there you are."

There are books on most subjects but we don't know of one that contains so much of ALL these subjects as the 1908 Catalogue of Cyphers Incubator Company. Certainly there is none so cheap, for although it contains 212 pages liberally illustrated it is FREE if you mention this paper. It contains full descriptions of poultry supplies, incubators, brooders, etc., made by this well-known and reliable firm. When writing for this big Free Catalogue address Cyphers Incubator Company, Buffalo, N. Y., Boston, Mass., New York, N. Y., Chicago, Ill., Kansas City, Mo. or Oakland, Cal.

IT WILL NOT COST YOU A CENT.

Hang a head of cabbage in each pen as an addition to the regular feeding. It helps to keep the birds healthy.

* * *

D. C. Peoples, Uhrichsville, Ohio has a commendable feature in connection with egg orders, by giving a full description of the pen from which eggs are selected or taking each bird individually so that purchasers will have an idea of the parentage of their stock. Circular gotten up by Mr. Peoples is a good one, giving a list of his winnings, full description of his breeding pens, many testimonials, letters and press comments.

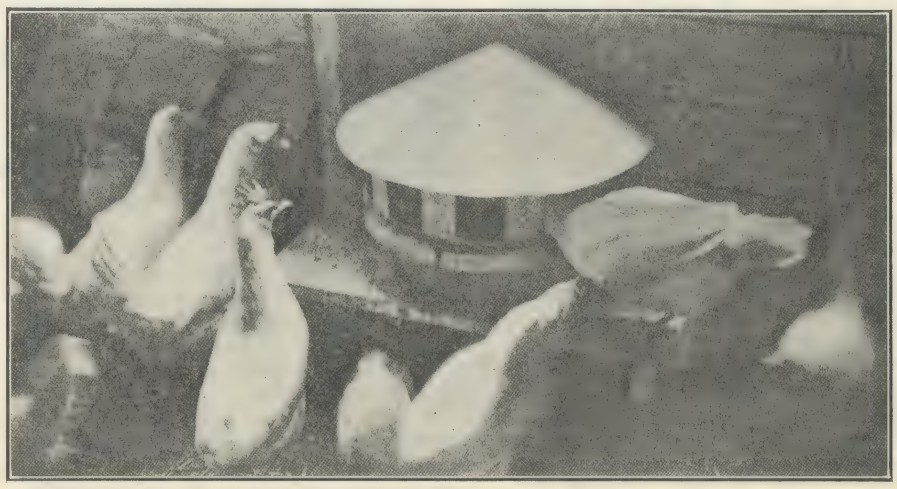


Fig. 103.—The Sanitary Water-Pan and Cover in use. Note platform 10 inches above the floor.

Claraben Farm

Buff Rocks of Quality. Eggs from pens headed by First Madison Square Cockerel 1907, and others as good. Circular free. Also Scotch Collies.

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

THE illustration on the title page of this issue, represents the 4th Barred Plymouth Rock Cockerel at Buffalo, owned by Maplehurst Farm, Canandaigua, N. Y., of which Mr. Geo. M. Benham is proprietor. The 1st and 2d Cockerels were also owned by the same farm. These three Cockerels are the product of Geo. M. Benham's own matings. The photograph was taken by Mr. Benham and sent direct to us, from which we made the half-tone plate on cover page without re-touching. This bird looks in the picture just as he does in the yards of the owner to-day.

* * *

The A. P. A. rules were not printed on the back of the entry blanks of the Madison Square Poultry Show. This was due to the fact that a previous agreement was made with a cooping company which gave them the right to print their advertisement on back of all entry blanks.

* * *

President Chas. M. Bryant has expressed his willingness for re-election if it is the wish of the A. P. A. members that he be his own successor.

Above we fully explain our advertising rates of both display and classified advertisements. Forms for February 15th issue close on the 10th.

The best fanciers are the best buyers. This class patronizes THE AMERICAN FANCIER.

This publication is mailed promptly on the 1st and 15th of the month. If subscribers do not receive their copy within a reasonable length of time, they will confer a favor by notifying this office.

* * *

The publishing of complete show awards and reports without favor to anyone, has caused some of our contemporaries to criticize, claiming that we should mention only the winnings of advertisers, as by our method we give free notice to a number of exhibitors who do not insert any paid advertisements.

We do not believe that a report, criticism, or list of awards of a poultry show should be influenced by certain advertisers, and we think it a duty all publishers owe their subscribers to publish impartial news. It is the subscribers, and not the editor's "puffs" that make a publication pay its advertisers.

We believe it only a matter of time when these contemporaries who have criticized us for publishing full lists of awards will do the same or lose a number of their subscribers. A reader in looking over the awards wants to see who wins, and not only the names of a favored few. All advertisers with whom we have talked on this subject, say they would rather that the complete list of awards were given.

The proof that the fanciers have appreciated our endeavors to publish this paper without favor to any one is that since last September our subscription list has greatly increased, and most every exhibitor, poultry and pigeon judge east of the Mississippi, and a large number of the Western ones, have sent in their subscriptions.

After getting as subscribers the majority of the leading fanciers, we started a subscription campaign among beginners which proved very successful and demonstrated the fact that a fancier's paper interests the beginner and commercial breeder.

To our criticizing contemporaries we would say: Get quality in your circulation, and remember it is subscribers, and not the publishing of exclusive winnings of advertisers that bring them returns.

* * *

The advertising rates of THE AMERICAN FANCIER were fixed last August, when the circulation was only about one-fourth of what it is to-day. Right along our advertisers have received large returns, and we have on file numerous testimonial letters, many of which report that THE AMERICAN FANCIER has sold all their surplus stock. We would be pleased to furnish any of our readers copies of letters of our advertisers who have sold from fifty to four hundred dollars worth of stock, from a one to six time inserted ad. And now with our increase circulation, but not in advertising rates, returns to our advertisers will be even more profitable.

* * *

The poultry season is almost at its height and advertisers should go after the poultry men as often as possible. A semi-monthly is just right. Our advertisers say so and they should know. Our subscription list reaches out from one end of the country to the other and stops each month at the homes of thousands of poultry men. It is an effective advertising medium and is read by the fancier, commmercial breeder and beginner. It is issued on the 1st and 15th of each month, and each issue goes in the mails promptly.

* * *

Twelve issues of most monthly poultry publications costs 50 cents a year, while twenty-four issues of THE AMERICAN FANCIER, a semi-monthly, costs the same. This figures the monthly at about 4 1-6 cents a copy, and THE AMERICAN FANCIER 2½ cents, and a paper issued on the 1st and 15th of the month furnishes its readers the news while it is news.

* * *

Poultry and the Panic

During the recent period of business depression, caused by the stringency in the money market, several poultry journals have gone on record, editorially, as of the impression that the poultry business will not be affected by the so-called panic, and commenting upon the fact that experience has proved that instead of the poultry industry becoming crippled by these periods of general business depression, it rather receives an impetus therefrom. A number of concerns, whose business it is to supply the poultry-keeping public with incubators, feeds, etc., have also issued circulars and advertisements, calling attention to the fact that the "hard times" do not have a damaging effect upon the poultry industry, and urging all poultrymen and prospective poultrymen to take the broad view of the situation. Following close upon these various utterances, which have been unanimously of one accord in the matter, comes an editorial in one of the prominent poultry journals, warning poultry keepers not to take these optimistic statements and predictions too literally.

What are the facts in the matter? Is there cause for alarm in the present economic situation throughout the country to the people who have large amounts of capital invested in the various branches of the poultry industry, and to those who are about to venture into this line of business, or is there something in this business of poultry-keeping, some peculiar, inherent something which makes the business immune from the depressing influences which affect practically all industries in times of financial stringency.

If we go back to 1893, the last period of "hard times" in this country, we find that there was one very surprising result of that panic. There was a concerted rush "back to the soil." Poultry plants, large and small, sprang up almost in a night. Almost everybody who had a back yard, quickly improvised chicken coops, and began the raising of poultry on a small scale. The result of all this was that the poultry industry in its various phases received a boom which fairly startled those who were watching industrial conditions.

That was what happend in 1893 and the years following. It is not argument, it is fact, and a matter of record and of history. And it happened at a time when the possibilities of the poultry business were practically unknown. Conditions to-day are much different. For the past few years the advantages, the pleasures and the possibilities of poultry keeping for profit have been widely exploited, not only in the poultry press which is now accessible and widely read in public libraries and reading rooms throughout the country, but also in the daily newspapers, the influential weeklies and the popular magazines of wide circulation.

If there was a rush to the soil in 1893, and an army of new recruits to the force of poultry-keepers, when the advantages of the business were almost unknown, what may we expect in 1908, when scarcely a person who reads and listens, can be found who has not had drummed into his mind the possibilities of keeping pure-bred poultry.

Would we not expect to find that the pure-bred poultry business in one or more of its branches would appeal with great force to the many thousands of men and women who have lost their positions through the general curtailment of business, and the corresponding throwing out of employment of a great army of people who formerly had places in stores, factories, mills, shops, and on railroads, etc. That is exactly what we would expect to find. Let us see if the facts uphold the theory.

The simple fact is that what happened in 1893 is already happening now, only quicker and more so. Ask any real estate dealer who handles farms and suburban properties, and he will tell you that not for years has there been such a call for poultry farms and small places in the suburbs, suitable for poultry keeping. Ask any breeder of pure-bred poultry, with a name and a reputation, and he will tell you that the number of inquiries for stock and eggs for hatching which he is receiving now, over the number he was receiving at the same time last year and the year before, is nothing short of startling. What better proof do you want that poultry-keeping and poultry-breeding do not suffer in times of financial panic in common with most all business industries, but on the other hand, receive a boom and an impetus from the very conditions which render most business industries unattractive- as profit making propositions.

There are various lessons to be learned from all this. To the breeder of pure-bred poultry who has kept his stock, or the best of it, while his weak-kneed neighbor has been selling out on account of the high prices of grain, there is the assurance that there will be a very ready sale for all the stock and eggs for hatching, which he can spare, and at good prices. To the man or woman who keeps poultry for the utility side, and who has hung on while many other poultry plants and houses have closed up, being scared out of business by an advance in prices of feed, there is the assurance that there will be a good market at high prices for eggs and poultry. And to the newcomer in the ranks of lovers of pure-bred fowls, and to the person who is looking for new blood to regale his flock, there is the assurance that when he buys, he will be reasonably sure of getting good value for his money, for the reason that high feed prices have caused a closer culling of breeding stock than usual, and generally speaking, only very choice stock has been retained for breeding purposes. And by the way, this latter thing is the very best thing which could have happened to the poultry industry just at this particular stage of the game.

The Coming Brooklyn Poultry Exhibition.

At this early date we learn from different Long Island poultry fanciers visiting our office that undoubtedly the Association which held so successful a show at Richmond Hill will next season hold a large poultry show in Brooklyn. It has not been decided whether this will be in the Rink on Claremont Ave. or in some hall further downtown in the Fulton street district.

Buffalo, December 16-21

By Geo. W. Webb.

Did Buffalo make good? It did, and any doubt that may have existed in the hearts of the chicken cranks about Buffalo being a show town have disappeared. The doors were thrown open to the public Tuesday morning, and from all appearances on the inside it resembled a Garden show more than any one we have ever attended. Everything took on a metropolitan aspect and the management has only to shake hands and congratulate itself on the magnificent display of poultry and pigeons that greeted the eyes of the visiting public. We doubt if the quality in many of the classes was surpassed by the Garden show, and when we consider that both shows were held the same week it certainly speaks good for Buffalo. The veteran judge and fancier, J. Y. Bicknell, had full charge of the exhibition and everything went off in clock-work order. The judging, with a few exceptions, was satisfactory. We could not follow the judge in Buff Rocks, where the Wyandotte type with the washed-out lemon Buff was placed over rich golden Buff with solid color and perfect Rock shape. We also failed to see where the 4th White Wyandotte pullet, a gem for shape, color and size, lost the Blue to a bird that, if it had a single comb, would have hustled the 1st White Rock pullet. The Americans showed up the strongest in numbers. Barred Rocks, a fine bunch. 1st and 2d ckl., 1st hen and 1st pullet remarkable for straight and even barring and depth of color. Buff and White Rocks also big classes, with plenty of quality left out. Forty-nine Columbian Wyandottes in the open class a study in black and white. Eighty-nine White Wyandottes and eight pens with crackerjacks going begging. Buff, Brown and White Leghorns, big classes, with Buffs in the lead, but all full of quality. Six hundred pigeons, representing the best breeders in the country. Take it all in all, Buffalo was strictly in it. Below we publish a complete list of awards:

AWARDS

ANCONAS—Ckl., pul. 1, G. E. Burt & Son.

ANDALUSIANS—Ck. 1, hen 1-2, ckl. 1-3, Gunning; 2, E. Weiss; pul. 1, Weiss; 2, R. M. Smith; 3, Gunning.

BRAHMAS—Light, ck. 1, E. E. Banks; 2, Dr. S. Lott; 3, W. J. Cox; hen 1-2, Banks; 3, C. P. Nettleton; 4, Dr. Lott; ckl. 1, Nettleton; 2, Banks; 3, Cox; pul. 1-2, Banks, 3, Nettleton; dark ck., hen 1, Dr. S. Lott.

COCHINS—Black, ck. 1, hen 1-2, ckl. 1-2, pul. 1, H. Emrick. Buff, ck. 1, hen 1-2, Emrick; 3, V. A. Baur; ckl. 1-2, pul. 1-2, Emrick. Partridge, ck., hen 1, Dr. S. Lott. White, hen, ckl., pul. 1-2, Emrick.

GAMES—Black breasted red, ck., hen 1-2, ckl., hen 1, Brooks & Hoffman. Brown red, ck., hen 1, Brooks & Hoffman. Duckwing silver, ck., hen 1, Brooks & Hoffman. Red Pyle, ck., hen 1, J. T. Bird; ckl. 1, Brooks & Hoffman; pul., Bird. Cornish Indian, ck., hen, pul. 1-2, Ess & Forrestel; ck. 3, Bird; 4, Brooks & Hoffman. White Indian, ckl., pul. 1-2, Liddon Bros. Pit, ck., hen, ckl., pul. 1, Liddon Bros.; ckl. 2, F. E. Tarbox.

HAMBURGS—Penciled golden, hen, ckl., pul. 1, Paradise Brooder Co. Spangled golden, ck., hen 1, Bird. Spangled silver, ck. 1-2, hen 1-3, ckl. 1-3, pul. 1, Dr. G. L. Preston; ck. 3, hen 4, P. B. Co.

JAVAS—Black, ckl. 1-3, pul. 1-2, G. M. Mathews; ckl. 2, pul. 3-4, Nye.

LANGSHANS—Black, hen 1-2, Lee & Son. White, hen 1, J. F. Knox.

LEGHORNS—Single comb buff, ck. 1, E. Jeffries; 2, W. Ewald, Jr.; 3, A. B. Cox; 4, A. W. Fritsch; hen 1, Cox; 2, Ewald, Jr.; 3, Jeffries; ckl. 1-3, Ewald, Jr.; 2, Cox; 4, Jeffries; pul. 1, A. W. Fritsch; 2, Cox; 3, Jeffries; 4, E. A. Miller. Rose comb buff, ckl. 1, H. J. Fisk; 2-3-4, A. F. Almendinger; pul. 1-2, Almendinger; 3-4, Fisk. Rose comb brow, ck. 1-2, E. D. Pierson; hen 1-2-3, ckl. 1-3, Pierson; 4, A. T. Filer; pul. 1-2-3-4, Pierson. Single comb brown, ck. 1-4, W. F. Brace; 2, G. G. Henderson; 3, F. Schellang; hen, 1-3-4, Brace; 2, Schellang; ckl. 1-2-3-4, Brace; pul. 1-2-3, Brace; 4, W. R. Bowers. Rose comb white, ck. 1, J. S. Pratt; hen 1, Pratt; 2, W. D. Norton; ckl. 1, Norton; 2, Pratt; pul. 1-2, Norton, 3, Pratt; 4, L. H. Perry. Single comb white, ck. 1-2-3, G. L. Wheeler & Son; hen 1-2-3, Wheeler & Son; 4, Ft. Willet Poultry Farm; ckl. 1-2-4, Wheeler & Son; 3, W. R. Curtis & Co.; pul. 1-2-4, Wheeler & Son; 3, J. Knox.

MINORCAS—Black, ck. 1, A. F. Goehle; 2, H. F. Langohr; 3, Maunder & Haass; hen 1-4, Maunder & Haass; 2, Goehle; 3, Wurste Bros.; ckl. 1, Goehle; 2-4, Maunder & Haass; 3, H. L. Himmele; pul. 1-2, Maunder & Haass; 3, C. R. Ingraham; 4, Goehle. Rose comb black, ckl. 1, W. H. Kaiser; 2, L. L. Gressman; pul. 1, Kaiser; 2, Gressman. Rose comb white, ck. 1, Mrs. J. G. Osborne; 2, Kenyan Bros; hen 1, Mrs. Osborne; 2, Kenyan Bros.; ckl. 1, Kenyan Bros.; 2, Mrs. Osborne; pul. 1, Mrs. Osborne; 2, Kenyan Bros.

ORPINGTONS—Single comb black, ck. 1, Wm. E. Bensley; hen 1, Bensley; ckl. 1-2-4, W. C. Crandall; 3, V. Matthews; pul. 1, Bensley; 2, Matthews. Single comb buff, ck. 1, J. Sheridan Beahan; 2, Bensley; hen 1, Beahan; 2, Mrs. S. Walker; 3-4, Bensley; ckl. 1, C. F. Braman; 2, Mrs. Walker; 3, Beahan; 4, Matthews; pul. 1-2, Mrs. Walker; 3, Braman; 4, Beahan. White, ck. 1, M. S. Gooding; hen 1, Gooding: ckl. 1, F. Hottman; 3, Mrs. Osborne; 6, Gooding; pul. 1, Mrs. Osborne; 2, Gooding; 3, Hottman. A. O. Variety, ck., hen 1, W. Dawson.

PLYMOUTH ROCKS—Barred, ck. 1, W. H. Bensley; 2, J. Burth; 3-4, G. M. Benham; hen 1-3, Benham; 2, Bensley; 4, Burth; ckl. 1-2-4, Benham; 3, C. Sasse; pul. 1-2-3-4, A. J. Riebel. Buff, ck. 1, E. M. Conklin, 2, G. H. Sweet; 2, W. M. Booth; 4, C. V. Daigler; hen 1, Conklin; 2, J. Liese; 3, Sweet; 4, Daigler; ckl. 1-3-4, R. Caudell; 2, Conklin; pul. 1-2, Conklin; 3-4, Caudell. White, ck. 1, Harp & Son; 2, P, B. Co.; hen 1-2-5, Harp & Son; 4, P. B. Co.; ckl. 1, Harp & Son; 2, S. F. Van Orsdale; 3, Curtis & Co.; 4, G. Weber; pul. 1-3-4, Harp & Son; 2, J. M. Vanentine. A. O. Variety, ckl. 1-2, pul. 1-2-3, G. H. Sweet.

POLISH—Bearded golden, ck., hen, pul. 1, J. W. Johnson. Buff laced, ck., hen, ckl., pul. 1-2, Mill View Farm. White, ck., hen, ckl., pul. 1-2, Mill View Farm. White Crested black, ck. 1, hen 1-2-4, ckl. 3-4, pul. 1-4, G. R. Conner; hen 3, ckl. 1, pul. 2, J. W. Johnson.

RHODE ISLAND REDS—Rose comb, ck. 1, hen 1-2, ckl. 1-2, pul. 1-4, F. C. Sibley; ck. 2, H. Freese; ckl. 3, F. Lang, 4, Phelps Poultry Farm; pul. 2, P. P. Farm; 3, P. B. Co. Single comb, ck. 1, G. A. Morris, 2, Mrs. J. Vaissiere; hen 2,; ckl. 1, G. A. Morris; 2, F. Lang; 3, P. B. Co.; 4, H. A. Anderson; pul. 1, G. E. Beatty; 2, P. P. Farm, 3, Hugo Freese.

WYANDOTTES—Black, ckl. 1-2, R. M. Coffin; pul. 1-2, Coffin. Buff, ck. 1, G. Weist; 2, B. L. Waite; hen, Weist; ckl. 1, J. R. Clancy; 2-3, F. L. Waterson & Son; 4, Waite; pul. 1-3, T. Welch; 2-4, Waterman & Son. Columbian, ck. 1-2, Dr. C. J. Andruss; 3, J. W. Mitchell; hen 1-2-4, Andruss; 3, Mitchell; ckl. 1-2, Andruss; 3, Mrs. C. S. Whiting; 4, Hillhurst Farm; pul. 1-2-4, Andruss; 3, W. Dawson. Golden, ck. 1, Dr. G. L. Leitze; 2, Paradise Brooder Co.; hen 1, Paradise Brooder Co.; ck. 1, J. H. McDanell; 2, J. F. Scholz; pul. 1, McDanel; 1-2-4, Leitze; 3, Scholz. Silver, ck. 1, V. Roth; 2, L. W. Seigfried; 3, Mrs. O. E. Westphal; hen 1-2, V. Roth; 3, A. T. Filer; 4, Seigfried; ck. 1, Seigfried; 2, H. R. Jones; pul. 1-3-4, Jones; 2, L. W. Seigfried. Silver penciled, ck. 1, P. B. Co.; hen 1, P. B. Co.; pul. 1-2, P. B. Co. Partridge, ck. 1, E. N. Unruh; 3, F. A. Keller; hen 1, Keller; 3-4, A. M. Gates; ckl. 1, Unruh; 2, Gates; pul. 1-3, Gates; 2, Unruh. White, ck. 1-2, Dawson; 3, F. C. Lisk; 4, I. M. Gaymonds; hen 1, F. C. Lisk; 2, Eadie Bros.; 3, Dawson; 4, G. R. Colby; ckl. 1-2, Dawson; 3, I. M. Gaymonds; 4, Eadie Bros.; pul. 1-3, Dawson; 2, Eadie Bros; 4 Lisk.

A. O. V. POULTRY—Ck. 1, P. B. Co.; hen 1, P. B. Co.; 2, T. Bird; ck. 1-2, Bird.

BANTAMS—Booted white, ck., hen 1, D. Richmond, Jr.; ckl., pul. 1, Bird. Brahmas: light, ck. 1, pul. 2, R. T. Dickie; ck. 2, hen 1, C. Barrett. Dark, hen 1, Dickie. Cochins: Black, ck. 1, hen 1-2, J. F. Knox. Buff, ck. 1, hen 1-2, ckl. 1, pul. 1-3, Knox; pul. 2, Bird. White, hen 1, Emrick; 2, A. L. Hoffman; ckl. 1, Hoffman. Japanese: Black tailed, ckl. 1, pul. 1-2-3-4, A. Richard. Golden Sebright, ck. 1, hen 1-2, ck. 1, pul. 1-2, Weist. Silver Sebright, hen 1, C. Rennardson. A. O. Variety, ckl., pul. 1-2-3, Bird.

GAME BANTAMS—B. B. Red, ck., hen, ckl., pul. 1, R. C. Schoonhoven; ck., hen 2, Mannder & Schall; ck., pul. 3, W. R. Bowers; ckl. J. D. Hoyt. Golden duckwing, ck., hen, ckl., pul. 1, Schoonhoven. Silver duckwing, ck. 1, hen, ckl., pul. 1-2, Schoonhoven. Red pyle, ck. 1, hen 1-2-3-4, ckl. pul. 1-2, Maunder & Schall. White, ck. 1-2, hen 1-3-4, ckl. 1-2-3, Maunder & Schall; hen 2, Emrick.

DUCKS—Indian runner, dr., du. 1, J. C. Knapp. Pekin, dr. 1, L. W. Seigfried; 2, W. R. Curtis & Co.; 3, Echo Poultry Farm; 4, E. F. Greth; du. 1, Seigfried; 2, Echo P. Farm; 3, Curtis & Co.; 4, Greth; 1907, dr. 1, Seigfried; 2, Curtis & Co.; 3, E. P. Farm; du. 1, Seigfried; 2, Curtis. Rouen, dr., du.; 1907, dr., du. 1, A. G. Barlow. A. O. V., dr. 1-2, du. 1, Becker & Schaefer.

GEESE—O. O. Variety, 1, J. T. Bird.

TURKEYS—Bronze, ck., hen, ckl., pul. 1, J. T. Liddle; ck. A. G. Barlow.

EXHIBITION PENS—Brahmas: Light, 1, W. J. Cox; 2, Paradise Brooder Co. Cochins: Black, buff, white 1, Emrick. Hamburg: Spangled silver, 1, Dr. G. L. Preston; 2, Paradise Brooder Co. Javas: Black, 1, S. S. Barber. Leghorns: Single comb buff, 1-3, W. Eward, Jr.; 2, W. H. Gaude; 4, A. B. Cox. Rose comb buff, 1, A. F. Almendinger. Rose comb brown, 1, E. D. Pierson. Single comb brown, 1-2, W. R. Bowers; 3, F. Schellang. Rose comb white, 1-2, G. L. Wheeler & Son; 3, Eadie Bros.. Minorcas: Black, 1, P. H. Rug; 2, A. F. Goehle; 3-4, Maunder & Haass. PROVIDENCE SQUAB Co, *772 Hope St, Providence, R.I.*

In Writing Advertisers Please Mention THE AMERICAN FANCIER.

THE Boston Show opened its doors to the public, January 14th. The exhibition was penned by that well-known firm, Spratts' Patent. The judging began about 10 A. M., and by evening, the awards, with the exception of specials, were all up.

We believe one meets even more pigeon fanciers at this show than at Madison Square Garden.

Mr. Richard Whitney had every detail arranged, and there seemed little confusion. The entry, although not a record breaker, numbered over 1,686, counting displays. More pleasing, however, than the mere numbers, was the quality, which was fully up to former years, many varieties showing a decided improvement, especially so with the youngsters produced in 1907.

Pouters, which open the pigeon section as usual, had 14 entries in the four classes, F. Toudor, Jr., again being an exhibitor, capturing all firsts. The first old hen was the pick of the collection.

Pigmies followed, and were a meritorious lot, over 170 being on parade. Mr. A. E. Smith handled the classes with every care, and seemed to know how to get all out of each bird. Mr. A. D. Brown won the lion's share with a grand team well put down.

Geo. Josenhan's was especially strong in Blues and Silvers, and Dr. L. A. Jones had a most excellent collection, very strong in Reds, Yellows and Creams.

Alex Smith's display of whites, were indeed very strong, and could have stood much stronger competition.

Dr. L. H. Jones won the specials, offered by the Club for the following: Best Yellow, 1907 Yellow, Silver Cock, Red, any age, Red Cock, Cream adult, Cream Cock, Cream, 1907.

A. D. Brown, for the best 1907 bred, 1907 pair Blues, Black, adult Blue Hen, most typical type shown; 1907 Yellow Cock, 1907 Yellow display, best Silver, adult, 1907 bred; 1907 Red, A. O. C. Geo. Josenhan's for the best Blue Cock (novice), adult Blue Cock, 1907 Blue Cock, 1907 Blue, 1907 Silver Hen, 1907 Silver, 1907, any color shown by novice. Alex Smith, for the best display of Whites, largest display (novice), smallest pigmy in the show.

FANTAILS—Numbered 148, in twenty-one classes. The quality throughout was very good, but with the exception of the winners, we could hardly see any improvement in the quality, as a whole, to former years. They were judged by Mr. Samuel Johnson, who acquitted himself well. In placing the awards, Mr. Johnson was careful, and with a few exceptions, we believe, picked the right birds. The entries of Whites from the lofts of Dr. F. C. Peterson were absent.

WHITE COCKS—14 entries. 1st, Havemeyer Bros., Old Champion, by far the best White in the class, and the best Fantail in the show; 2d-4th, Howland. 2d, very neat bird, small; 4th, large, inclined to be coarse; same owners, Pen 186, we preferred to 2d, being better in body, equally as good in tail as the 2d, and by far better style and action. 3d, G. E. Hook; a well put together Fantail, but lacks the finish of those above.

WHITE HENS—1st Havemeyer Bros.; an easy one; the N. Y. winner came to the front in this show. 2d-3d, G. E. Hook; two nice bodied little birds, carrying a good tail, plenty of length of feather. 4th, Dr. F. H. Howland; well shaped body, plenty of style and action, but does not get down as we like to see the Fantails of to-day; this class was well placed.

YOUNG WHITES—18 in the class. 1st-2d, Havemeyer Bros.; the winner of the 2d New York White Cock; grand style and action; alaways in proper condition; plenty of length in feather and tail, and a typical bird, but a trifle large. 2d, the New York Hen; very sweet, little bird; fine body, round, carrying a good tail; showed much better than in the pen at New York. 3d, E. H. Howland; small, round body, nice tail; a good fantail. 4th, Cock; plenty of style and action; good tail, a little bit high.

BLACK COCKS—1st-4th, Havemeyer Bros.; the winner streaks ahead of the class; very fine color, well rolled up; wins easy. 2d, F. M. Hoyt; not so good in color; larger and much coarser. 3d, F. H. Howland; fine body, plenty of style and action, fair tail; loses in color.

BLACK HENS—1st-2d, Havemeyer Bros.; plenty of style and action; good color; two good hens.

YOUNG BLACKS—1st, Havemeyer Bros.; Black Cock; grand color; shows beautiful style and action; fine in neck and head; just a trifle long in leg, otherwise a gem. 2d-4th, Alexander Hay, fine pair shown in the pink of condition, and just a little bit behind the winner. 3d, F. M. Hoyt; good all round bird.

In Reds, old classes were the ordinary quality, nothing startling but in Young; the 1st Havemeyer Hen also winning 1st at New York, is the best Red Hen yet shown in this country; very small, always in position; good body, fine tail.

YELLOW COCKS—1st-2d-3d, Havemeyer Bros.; with a good team for Yellows. 4th, Jesse M. Rutter; poor color, very coarse; this class was well placed.

HENS—1st, J. M. Rutter; decidely lucky; coarse in neck, too light in color, poor style and action. 2d-3d, Havemeyer; we consider the third bird by far the best bird in the class, and either 2d or 3d were way ahead of the first.

YOUNG YELLOWS—1st, Dr. Howland; the 3d New York bird; good color, rather large, fair tail. 2d-4th Havemeyer; the 2d we consider the best in the class; fine style and action; beautiful body, good tail and always in position.

BLUE OR SILVER—1st, Havemeyer Bros.; the third New York bird; good color, plenty of style; good tail, in fact too much style; too tight, and simply crowds its tail. 2d, Howland; good color, style and action.

HENS—1st-4th, Bigelow. 2d, Howland. 3d, Havemeyer Bros.; all good birds and well placed.

BLUE, YOUNG—1st-3d-4th, H. W. Cate; a winner; fine color, style and action; carries wry tail, and we would hardly place her over the 2d Hen, owned by Alexander Hay; very sweet, little Hen; fine style and action; very round in body; carrries a grand tail; the best Blue in the class.

SADDLE BACK COCKS—1st-2d, Havemeyer Bros. 3d, J. C. Shaw; the winner, a Blue Checker; plenty of style and action; carries a good tail. 2d, a Black, larger, but very typical in body properties.

HENS—1st-4th, Havemeyer Bros. 2d, J. C. Shaw. 3d, F. H. Howland; the winner, the 2d New York Hen; plenty of style and action; well rolled up; grand body; a good tail. The 2d a Red Saddle; fine style and action; grand tail; well placed.

YOUNG—1st-4th, Havemeyer Bros. 2d, Shaw. 3d, Alexander Hay; a good class; plenty of quality and well placed.

The Any Other Variety Classes, brought together 13 birds—Blue Checkers, Mismarked Blues, Strawberries. The classes were well handled.

TUMBLERS are usually a most interesting collection at Boston, and the array which faced Messrs. A. J. Edwards and John Glynn, were no exception to the rule. The quality throughout was up to the standard, and many promising birds made their debut. We were very much taken with L. G. Broschkowsky's clean leg Whites and Blacks; the winning youngster was a typical tumbler, and will make a hard proposition next year. H. Young R. Whitney, Geo. Eustis and H. A. Jaeger also showed some grand birds.

TIPPLERS brought out 13 entries; nothing startling in the collection.

JACOBINS, although not up to New York in either number or quality, had some really remarkable birds. The winning old Cock and Hen in the Black classes were easily the class of this section. The Cock, much the better of the two, and by far the best Black Jacobin we have ever seen. Remarkable length of feather, grand chain and hood, and exceptional carriage. Both were owned by F. W. Gorse.

Mr. Kennedy handled the classes in a satisfactory manner.

OWLS, both African and Chinese, were not what they should be at a show of such importance as Boston, a very ordinary lot, and show a decline on former years.

ORIENTAL FRILLS brought together some fine birds, especially in crested Satinette. H. E. Johnson showed a fine old cock, and H. Strauff's team of babies were quite promising.

TURBITS after the grand collection at Madison Square Garden, Boston was a disappointment.

MAGPIES at Boston, as well as New York, were a poor collection. Mr. Geo. E. Rowland, for some reason, did not show, although he had made entries.

We believe, with a little hustling, done on the part of the members of the Magpie Club, they can again be brought to the front.

NUNS came out fairly strong. Staples & Washburn showed a fine team, both in number and quality.

There seems to be quite a few breeders of this variety, and we should think, with a specialty club formed, good work could be done. Some years ago, Mr. W. H. Shipman imported, at a considerable expense, a few first class specimens, but of late, nothing has been heard from them.

DRAGOONS. Boston felt the effects of New York, but mustered together a fine collection. The blues, shown by W. E. Mills, and Grizzles, by F. H. Wright, were of a high order and the correct type. Only a few years ago, Boston was the Dragoon show of the country, but the past two seasons has given way for New York.

HELMETS were the surprise of the section. Only a year ago we saw them one in a class, and only three classes at that, to 60 this year.

The judge followed too closely the Nun standard, and long faced birds were given every chance. The present day Helmet should have a short, clear beak and not on the style of the Swallow or Nun.

Mr. A. E. Robst won the special for the best crested, with his odd Yellow Cock, and C. Krueger captured the special for the best plain head.

SHOW AND EXHIBITION FLYING HOMERS made a fine collection. The section was extra good and contained many well-known birds. Some discussion arose, but nothing serious developed. It appears to get the ideal judge is a task beyond both the club and the secretaries of the different Associations.

If the standard would remain three or four years alike, fanciers would probably know what is correct.

We hear of some instances where the judge has sold birds for certain exhibitions, and then passed opinion on these specimens. This is certainly detrimental to the fancy, and when proper proof is given, should be exposed and debarred from the pigeon fancy. At the present time, we are glad to say, the pigeon fancy is in a most healthful state, but if these methods continue, it will have a most disastrous effect.

* * *

Dr. John Hurdis was a visitor at Boston for only a day. At Rochester, the entire judging was put on the Doctor. After working over 10 hours straight without stopping for meals, the job was completed. By the entries in the German classes it was no easy task either.

* * *

While at Boston we had the pleasure of visiting the lofts of Mr. Samuel Johnson. The collection of Black and White Fantails we found at Milton, was simply a treat. The new arrivals from the lofts of Wm. Stevenson, of Scotland, were to our way of thinking, grand, especially a White Cock, we believe, 2d at the Palace.

Although we enjoy having Mr. Johnson handle the stick, we would like to see his birds make their show debut next season.

* * *

Mr. F. W. Gorse was the proud owner of the 1st Cock and 1st Hen, old class, of Black Jacobins, both imported, and just about the real thing. Unfortunately for Mr. Gorse, and decidedly fortunately for others, they were not in time for New York.

* * *

Pigmies brought out some toppers at Boston, and, although nearly two hundred were shown, a much larger entry should have been made.

Mr. A. E. Smith has worked hard for the interests of the Pigmy, and handled the classes with much confidence.

Baltimore was not represented, which is a surprise in this alley.

Washington was represented and took to the Capitol many of the specials.

* * *

Dr. L. H. Jones' collection of Pigmy Pouters were so valuable, and hearing of the loss sustained by Mr. Hoskins, they were taken to Boston on board the Fall River Line in a private state room. Geo. Josenhans tried the same trick, but it wouldn't work; he was told, "the express company was the proper place," but they arrived safely Tuesday morning. Fortunately both were not allowed on the same boat; as it was, Mr. Alex Smith showed the signs of a sleepless night on account of the "cooing."

* * *

What a trip the New York delegation had going to Boston. A. E. Robst never ceased talking about Helmets and Hollanders. Dr. Jones, Alex Smith and Geo. Josenhans, all Pigmies, not in stature, but in talk, and Mr. Kennedy, wondering what he had to face in the different classes which he was down to judge.

* * *

During the past month many have written to this office regarding the longest record flown in 1907, by a homer. Dr. J. Schilling flew his bird 1,004 miles, in 2 days, 5 hours, 50 minutes and 28 seconds, which is the champion old bird record.

A youngster, owned by E. B. Walker, flew 500 miles in 1904, with a speed of 1191.30 yards per minute.

Orientals at Boston

By A. A. Ashley

ORIENTALS came out nearly as strong at Boston as at New York, there being 97 of them in all and over 60 Satinettes. The Satinette exhibit was no doubt the best that has ever been seen in this country. It was only after the most careful consideration that Mr. Kennedy could decide where the ribbons belonged.

The management apparently appreciated the fine entry given them, for they were placed in the best of light, and many a bird which in a poorer light would have escaped detection of some of its poorer qualities, could not shadow these points at Boston. All coops were locked and the birds were well looked after, while packing for the return was not started until Sunday, and those going to Chicago were left in the coops until Monday, so that they would not be boxed up any longer than necessary.

The coops being locked, it was not possible to examine the birds closely and in this way many of my decisions may be entirely wrong, as there are

many points which come to light when a bird is handled.

Plain Head Satinettes came out much better in numbers and in quality than at New York. Three cocks were entered, first being a much better bird than any of those at New York. The other two birds were ordinary in quality.

In hens first and second were pretty close, but think they could have been reversed in order. There were four in the class.

In young birds there were four entries, first well laced, second fairly well laced with gay tail, third also had a gay tail.

Crested cocks came out with eleven entries and was a great class. First, although a fine stock bird, I would say it should have been placed about fifth, as the lacing was not distinct and regular enough, while the tail was very gay. Second was a good headed bird with gay tail, but lacing much better than first, while third, although a little beter laced than second, yet the head was not good enough to offset it. Fourth was very much like an unplaced bird belonging to Bauer and would have been beaten by this bird if it had not had one tail feather missing. Synder had a bird in this class, which I would call too light for a show bird, although a very good stock bird.

Hens also came out strong with eleven entries. First was a nice laced bird and beat second on head. Second won over third on lacing. Fourth had a gay tail and did not have as good a head as the one placed third. Fifth was a Dun Lace which has done well, but the class was too hot for it.

Twelve young birds came out. First was a good bird, well laced and good head. Second I should have dropped entirely, as although the lacing was even, it was decidedly blue in color and not at all the color required by the standard. Bauer had a good headed bird in this class which was unplaced and would no doubt have gone higher except that when the wing is opened many of the feathers are hardly laced at all. However, taking head and everything into consideration, I believe this bird was worthy of second, and the one winning fifth could have been placed third. Third was a well laced Sulphurette and should have been fourth as I do not think quality of head would warrant its being placed over the bird winning fifth.

Black Laced Satinette Cocks had a class of six. The old Waldron Black Lace came out and took the blue ribbon once more. This is the first time that this bird has been shown for three years, and although he is not as evenly laced as some I have seen, yet the head is enough better to win out. Second was a little better laced than first, yet head was not good enough to win. Third was close behind second in every way. Fourth and fifth were very close and would not attempt to judge except after handling them.

The hens were a good lot of five and they were all fine birds, and well placed.

Of the six young birds, first was a very fine bird and one that will probably have to be reckoned with in later years. Second beat third and fourth in general shape and all round points.

Two cocks and one hen showed up in Barred Blondinettes, but these were of good quality in every way. Barred classes must be filled better than they have at the shows this season or they will be placed in the Any Other Color Blondinettes.

In Black Laced Blondinettes there were one cock and four hens. First hen was a very good bird, as was also second and third. Fourth was another good bird but failed in lacing.

There were three young birds, first winning on head and color.

Blue Laced Cocks were a class of four and of much better quality than the cocks shown at New York. First and second were well shaped birds and first better laced than second.

One Blue Laced young and one A. O. C. cock were shown. Also two A. O. C. hens which were fair birds.

In the A. O. C. young, first was the bird which was given special for best young Oriental in the show at New York. Second beat third on lacing and was no better in head.

Bluette cocks were not to be classed with the class at New York, but in hens, first was a fair-headed bird with white bars, and second was close behind with a gay tail.

Six young Bluettes were shown, first being a fine bird which was not shown at New York, and second was the one winning second at that show. Third was the bird winning fourth at New York.

In Oriental Trubits there were five birds, some of which were heard from at New York. There is still a chance for someone to take up this variety.

Those who attended the Boston Show were very well satisfied with Mr. Kennedy's work, and expressed themselves as willing to show under him again. Although, of course, we can always see something different than the judge in some places, whoever he may be, yet Mr. Kennedy certainly gave general satisfaction. It is hoped that he may again have the opportunity to use the "Oriental Stick," and that Boston may have an opportunity to show the Orienal Frill Club its appreciation for a good entry.

Jacobins at Boston

The special prizes were won at the Boston show, by the following:

Cup, for six best Jacobins, one color, F. W. Gorse; $5 for best adult Jacobin, Black Cock, F. W. Gorse; $5 for best young Jacobin, Red Hen, F. W. Gorse; $5 for best hooded Jacobin, Red Cock, 1st adult class, F. W. Gorse; $2.50 for best Jacobin, Red Cock, 1907 bred, F. W. Gorse; $2.50 for best Jacobin Red Hen, 1907 bred, F. W. Gorse; $2.50 for best Jacobin, Yellow Cock, 1907 bred, Eby; $2.50 for best Jacobin, Yellow Hen, 1907 bred, F. W. Gorse; $2.50 for best Jacobin, Black Cock, 1907 bred, Winsor; $2.50 for best Jacobin, Black Hen, 1907 bred, Winsor; $2.50 for best any color Jacobin, Hen, 1907 bred, F. W. Gorse.

The writer tried hard to get out a good entree of Jacobins at the Boston show, and Mr. Hoskins loss, Mr. Koehlers forgetfulness, and Mr. Hydes decision not to show on account of Mr. Hoskins' loss, left a big hole in what was fully expected to be a grand entree. The writer, upon the assurances to the Boston show of a good entree, obtained extra classes for young hens, a specialist judge, and extra cash from the association, and I must say I now feel rather cheap at the result, and trust the members of the Jacobin Club will show a greater interest in a good representative entree of their variety or they will have no one to blame for lack of interest in the Jacobin but themselves.

The old excuse is "what show have I got against so and so." If one looks at it purely from a stand point of what one can win, there will be very few Jacobins at future shows for some time, for there are some phenomenal birds. But if you will pardon me for sermonizing, I must say that is not the proper spirit in which the true fancier shows his pigeons. It's an honor to get a mention in some classes, more so than to win with one in a class, and it is the writer's wish and hope that the Jacobin Club members wake up to the fact that outside of the club show the Jacobin is a very scarce article in our pigeon shows. This is all wrong, and I hope this short sermon will be taken in the proper spirit and each member who has show birds will be represented at all our leading shows, not necessarily with all your good ones, but with *some* of them.

I may say, I have made arrangements with the Secretary of the American Pigeon Club, Mr. Whitney, whereby the club will have 1,000 bands consecutively numbered. Those who wish them now can have them, though if not in absolute need of them, on account of slow delivery, it would accommodate him to wait. FRANK W. GORSE.

Woonsocket Show

Between 750 and 800 birds, with entries in the American class and Bantams being large. Barred Rocks, a very good average lot, with some nicely barred cockerels. The winning White Rocks were all fine birds, with first cock a good winner. Some nice hens, and a fine lot of pullets shown. Some of the cockerels rather weak in color.

White Wyandottes were a good class, the pick of the lot being the cock. Nice colored birds won in youngsters. Buffs were the largest class in Wyandottes, and fine quality throughout. A grand shaped bird won in cocks, and first cockerel was very good.

A small entry of Silver Laced Wyandottes, but they showed great strength in evenness and clearness of lacing and centers. Columbians a fair class.

S. C. Rhode Island Reds a strong lot. The winning cock was a nice bird, both in shape and color. Second also a good one. The cockerel class was a large one, with a lot of nice birds winning. Hen good in shape as a rule, but not quite as strong in color. Pullets good.

In Orpingtons, the Blacks led both in numbers and quality. Leghorns were good classes, Whites leading in numbers.

The best of the Asiatics were the Black Cochins, the winning cock showing great feathering.

A big entry of games of fair quality.

In Bantams, Black Red Games led in numbers. The winning males were tall, hard feathered birds of nice station. Females good. Red Pyles a nice lot, the pick of the class being the winning cockerel, a tall bird with nice shoulders, but weak in wing bay. Some good Duckwings and Birchen were shown. Black Cochins were the best of the little Asiatics; with a couple of nice Buff pullets. The pick of the White Cochins was the winning pullet. The birds were cooped singly, in new wire coops. All judging was completed the first day, and ribbons up promptly.

AWARDS

BARRED PLYMOUTH ROCKS—Cock 1-2, ckl. 3-4, pullet 1-3-4, C. A. Tower; cock 3, hen 1, Chas. F. Richardson; cock 4, hen 4, Thos. W. Shaw & Son; hen 2, ckl. 2, pullet 2, pen 3-4, C. O. Arnold; hen 3, T. T. Sawyer; ckl. 1, Henry L. Southworth; pen 1, I. F. Wood; pen 2, C. A. Browning.

WHITE PLYMOUTH ROCKS—Cock 1, hen 1, ckl. 1, pen 1, Edw. S. Cawthorne; cock 2, hen 2, B. B. Chilson; cock 3, hen 3, ckl. 2, pullet 1-2-4, S. B. Besse; cock 4, W. W. Aldrich; hen 4, S. D. Bushee; ckl 3, pullet 3, John H. Northup, Jr.; ckl. 4, Fred M. Rhodes; pen 2, C. O. Arnold; pen 3, Walter M. Robinson.

BUFF PLYMOUTH ROCKS—Cock 1, hen 1, ckl. 2, W. W. Aldrich; cock 2, B. B. Chilson; cock 3, hen 2, ckl. 4, pullet 4, A. W. Care; ckl. 1, John H. Tarment; ckl. 3, pullet 1-3, Chas. F. Richardson; pullet 2, T. T. Sawyer.

SILVER LACED WYANDOTTES—Cock 1, hen 1-2, ckl. 1, pullet 1, pen 1, Philip E. Morgan.

WHITE WYANDOTTES—Cock 1, hen 4, Matthew Tattersall; cock 2, hen 1, Thos F. Kane; cock 3, hen 3, ckl. 3, pullet 2, pen 3, J. G. Aldrich; cock 4, hen 2, ckl. 2, pullet 3, H. M. Green; ckl. 1, pullet 1, Albert M. Lawton; ckl. 4, pullet 4, B. B. Chilson; pen 1, S. F. Bicknell; pen 2, A. W. Care.

BUFF WYANDOTTES—Cock 1-2, hen 1-4, ckl. 2, pullet 2, A. L. Hathaway; cock 3, ckl. 1, pullet 4, pen 2, C. O. Smith; cock 4, hen 2, pen 3, J. G. Aldrich; hen 3, ckl. 3, pullet 1, Chas. E. Coffiin; ckl. 4, B. B. Chilson; pullet 3, pen 4, Jas. A. Greene; pen 1, F. A. Wheeler.

PARTRIDGE WYANDOTTES—Cock 1, hen 2, ckl. 1, pullet 1, E. O. Cornforth; cock 2, hen 1, R. H. Locke.

SILVER PENCILED WYANDOTTES—Cock 1, hen 1, ckl. 1, pullet 1, J. E. Perkins.

COLUMBIAN WYANDOTTES—Cock 1, hen 1, ckl. 2, pullet 1, F. M. Andrews; ckl. 1, pullet 3, L. G. Walker; ckl. 3, pullet 4, Gilbert Harris; pullet 3, pen 1, C. O. Smith.

S. C. RHODE ISLAND REDS—Cock 1, hen 4, ckl. 1, pullet 1, pen 1, E. O. Cornforth; cock 2, ckl. 3, C. O. Smith; cock 3, hen 2, pullet 3, pen 4, Frank D. Read; cock 4, ckl. 2, pullet 2, Old Acres; hen 1, F. A. Garriepy; hen 3, pen 3, A. F. Tilton; ckl. 4, pen 2, Otto Ockert; pullet 4, Gilbert Harris.

R. C. RHODE ISLAND REDS—Cock 1, ckl. 2, B. B. Munger; cock 2, hen 1, ckl. 1-3, pullet 3, pen 1, E. O. Cornforth; pullet 2, Gilbert Harris; pullet 1, John F. Bowman; pen 2, Matthew Tattersall.

LIGHT BRAHMAS—Cock 1, hen 1-2-3-4, A. W. Care.

DARK BRAHMAS—Cock 1, hen 1, ckl. 1, pullet 1, pen 1, Thos. W. Shaw & Son.

BUFF COCHINS—Ckl. 1, Chas. E. Coffin.

BLACK COCHINS—Cock 1, hen 1, ckl. 1, pullet 1, W. S. Williams.

We do all kinds of Printing for Poultrymen

CIRCULARS and CATALOGUES that are poorly gotten up tend to give an impression of carelessness. Good printing costs very little more but will bring much greater results. Good printing is not a mechanical knack—it is produced by brains. The man who turns out poor printing is what other printers call a "blacksmith." No matter how high the price, a printer who hasn't got it in him cannot produce artistic printing. Originality and artistic construction is what makes advertising literature attractive. Now-a-days, poor printing gets nowhere except the waste-basket. A well worded circular or booklet is a first-class salesman—but it must be well printed. Impressions are important, for many who get your printed matter never see you and know you only by the wording and appearance of the literature you send them.

ARTISTIC PRINTING AT LOW PRICES

ENVELOPES, LETTER *and* NOTE-HEADS, CARDS, CIRCULARS

VOL. XXVII NEW YORK CITY, FEBRUARY 15, 1908. No. 697

Some Essential Points in the Mating of Fancy Fowls

Written expressly for "The American Fancier"

By Rev. C. E. PETERSEN

DURING this month very many fanciers will begin the mating season, and though a great many fanciers have already mated their yards, the large majority will not do so till this month, and even later.

Where the accommodations are limited, it is not wise to hatch too early in the season, as it will take extra care and almost continual attention to properly look after the chickens, and in northern latitudes this is particularly so.

There is one time of the year when everything springs into life and fruitfulness, and that is the Spring season and it is a well established fact, that chickens hatched during the months of April and May grow apace and develop faster than at any other time in the year, though in the more Southern States where Spring opens earlier, March is the month for hatching chicks.

Now there are some essential points in the mating of fowls that cannot be lost sight of, if good results are to be obtained, and the first one to mention, is the proper selection of the male bird, as on his fitness the whole season's work depends.

Careful selection should have been made in the Fall, of all the likely breeding males, and from these, should now be selected, the best bird or birds for the perpetuation of their breed.

The male bird should be of the correct size as required by the Standard requirements of his variey, though it may be permissible to use a male bird that may lack slightly in size, if he should be extra good in other respects, as it is generally conceded that the size comes from the female, and style and finish, or in other words, the fancy points, from the male.

This should, however, not be made a continuous practice, for where it is, the male line will run small in size, which is by no means desirable in any breeds outside of the Bantam family.

But where the need is obvious, male bird lacking in size, should be mated to extra heavy females, and over in England where size counts so much, more even than color, a deduction of more points for lack of size in the female is called for in their Standard than in the male, showing that the importance of size in the female over there is very vital and considered so, on the offspring of the breed.

We cannot but help feeling that entirely too much importance is placed on color, and not enough on size and shape, as far as our own Standard is concerned.

Size and shape is the making of the breed and it is dangerous to neglect it in any variety, for where it is done, it comes back on the breeder with a vengence in after years.

Size and shape gives the so much admired uniformity of type in a flock of birds, and where it is lacking to any noticeable extent, it shows poor selection and still poorer breeding.

For this reason a copy of the Standard becomes almost an imperative necessity in the hands of the fancier, for without it, it is only the expert breeder that can properly do his work in mating up a yard of birds for good results, and even here, though he has not the Standard in his hand, it is firmly rooted and grounded in his mind that the ideal for which he is breeding stands out firmly and correctly in his inner vision, and for the simple reason that he has studied the book of books on the proper points of fancy poultry.

So if the reader has not a copy of the Standard on his book shelf, by all means send $1.50 to this office and get one, for without it he can make but little progress.

It may be said that the cost of the book is too much, for he is buying a lot of other Standards beside the one he really wants, but this is a still further inducement to buy, for in comparing his breed to others therein described and pictured he will get a far better idea than in any other way could be obtained of the difference in shape and characteristics of his own chosen breed to those of others.

Next to this in importance is to chose a strongly, vigorous bird, and it should be remembered that a bird may have the required size and all other desirable points, and yet be a poor breeder.

Watch carefully, and take notice whether he gives the proper attention to his harem, for strong fertility is one of the essentials, and except the bird which is to head the breeding yard is not sexually mature, fertile eggs cannot be obtained, and where they are fertilized by a bird that is not fully mature, we are convinced that the result will be a too large proportion of chicks dead in the shell.

There are some signs that are much in his favor as a good breeding bird, namely: a continuous activity, an incessant galantry towards the females, a strong crower that sends forth the clarion note without ceasing, such a bird is the right kind of a breeder.

On the other hand, a slovenly, glutonous, early to roost male will not prove a good investment in the breeding yard and ought immediately to be discarded.

If the the male has any defective points, be sure that the females are particularly strong in this respect, and they may offset this defect in the male, but it is far better to use an all around good male and less disappointment will be the result.

One other warning I may make concerning the breeding male, and it is this: if his comb has been badly frozen he will not fertilize the eggs till he is fully, or at least nearly cured of this trouble, that may happen to any breeder, even under the best of care and attention, particularly in the large combed varieties.

If you have been unfortunate in this way, take the bird and rub the frozen parts gently with snow, or immerse in cold water till frost has gone out, then dry the comb or wattles and bathe in alcohol, and if this treatment is given him in time he may keep his comb, for if not attented to, it will slough off and the bird will be ruined for an exhibition specimen.

We have know a number of breeders who would be careful enough to shield their birds from this calamity, by putting flannel hoods over the comb and thereby protect the comb of a valuable breeder, for there are a great many breeders that depreciate artificially heated poultry houses and think it weakens the stock, and makes it lose hardiness of constitution so essential to most all races of fancy fowl.

In the selection of the females, use the same care and select the most typical birds of the breed, and whatever is lacking in their general requirements, don't let it be uniformity of type, as a good uniformity shaped flock of fowls cannot be produced if this is neglected. Pullets, except they be a year old, make very poor breeders, but at this age they will do very well, but where it is possible, yearling and two-year-old hens make the best breeders, and the chickens will be stronger and grow into much finer birds.

It is a mistake to use immature stock in the breeding yard, and it would be far better to postpone operations than to use a lot of small eggs, laid by late hatched and poorly developed stock, than to use such eggs for hatching and expect anything but the very worst of results.

Feed carefully and with suitable food stuffs, as most breeding yards are over, than under fed. Don't think, however, that a starved fowl will make a profitable breeder, any more than the one who is over fed; there is a golden mean, and that consists in giving the birds nothing but dry grain in variety to scratch for. Green bone or beef scraps or both, and green food of some kind, a continuous supply of good water, grit and shell, and there will be no trouble on the matter of infertile eggs or lazy fowls, but an increased activity will be the result, and chickens hatched from such birds will be little trouble to raise, for they will send the egg shell flying as they make their entree into this world of ours, and will from the beginning show that they have a strong desire to remain here with us. It is such chicks that make the chicks worth while the raising and all the care and attention bestowed upon them.

Three typical White Minorcas. Owned by the Elm Grove Poultry Yard, J. N. O'Neil, prop., Toronto, Canada.

Feeding for Eggs

By MILTON G. BRYANT, Hudson, Michigan

I want to say right at the beginning, that there is no best layers, all breeds will lay well if fed right, housed right, and managed right. I have been asked several times when I commenced to prepare my birds for the show room and the nest, and to that question will say that I commence to prepare for the show room when I mate my birds, and for the nest when I give them the first feed in the brooder. The all important thing to remember and understand is individualism, I do not mean to be so familiar with your birds that you have a name for each one, or can pick them up any place, but understand their characteristics, wants and needs, and in fact, you must be a good judge of hen nature. A man is a mighty poor politician that cannot understand human nature, and will make the same failure that the hen crank does, if they are not naturally adapted along the same line of good judgment of animal and human nature. It is not a case of the breed or money expended, or fine quarters, or balanced rations, but of good, old common sense. I will admit that a balanced ration, as you buy it from the dealer, is far ahead of any one ration given all the time; but if you will notice, you will see in feeding a balanced ration all the time, your birds will leave certain kinds of seeds, some one kind, and some another, and I believe that will bear me out in the statement that you must be acquainted with your birds. I have some birds that will not touch beef scrap, or beef meal; I have separated them and given them green bone, but if I should keep them on beef scrap or beef meal they would not lay an egg. I have hens that will not eat barley, oats, corn, wheat or buckwheat when all are mixed together to form your so-called balanced ration, and my advice is to separate your hens and pullets, and separate the grains, or rather not mix them, and feed each little flock according to their requirements; they have likes and dislikes, just the same as we. For instance, take fifty men, shut them up in one house, give them a yard to exercise in, feed them on a so-called balanced ration of potatoes, cabbage, onions, beef steak and a sloppy soup, and you will notice that it will not be long before some one will commence to complain and want something different, so it is with fowls Study them, cater to their little wants, and you will be paid a good per cent. for your trouble.

Management of the Sitting Hen

The first point in the management is the choice of the nest-box, just nice size for the hen to cover the batch of eggs. Orange-boxes are good if three compartment, then made into two compartments. Plenty of clean hay should be placed in it, and hollow the nest out in the centre, so that all the eggs roll towards the centre. Place the box in a shed free from draughts, and away from vermin, such as rats. It is best to set the hen in the evening, on china eggs first, after which, if settled down, may be given the eggs for hatching. During the time the hen is sitting she will require about ten minutes' attention daily to feed and water, which is best done at the same time each day, if possible. Make no unnecessary noises; place your hand under each wing when lifting her off the nest, and allow her to eat as much as she can. Maize is about the best food for sitting hens, as it produces warmth. The drinking water must be sweet and clean, otherwise diarrhoea will be prevalent. Dust the nest often with good insect powder. Test all eggs on the ninth day, and those which are perfectly clear like new laid, should be taken away and kept for cooking for the newly-hatched chickens. Damping the nest with warm water on the eighteenth day is advisable, as this helps to soften the skin, and assists the chick greatly when chipping the egg. As to the duration of time the hen should be allowed off the nest, this will vary; but about ten minutes is long enough, especially during the cold, frosty

weather. The essential points of management are: Cleanliness, pure water, quietness, and regularity, with personal attention.—C. B. TAYLOR.

Management of Early Broods

This subject has been discussed by many writers of this country; the following was written by an English fancier for *Feathered Life*:

"There are a great many poultry keepers who do not posses an incubator, and are also unable to get eggs hatched out for them by neighbors. One of these days, no doubt, there will be a 'hatching station' in every country town, a depot where poultry-keepers will take their new-laid eggs early in the season, and, three weeks later, call again and fetch the chickens. Then they will have nothing to do but rear them. Only that, and nothing more, as the song says. Would that it were as easy as talking about it! But a great many of us cannot even get the hatching done for us, but have to wait till a hen becomes broody. It is somewhat curious, by the way, that the rise in favor of artificial incubation has been contemporaneous with the popularity of the Orpington, the Rock, and the Wyandotte, all incubating breeds. But this, in a way, is fortunate, because keeping one or other of these breeds, as the majority of poultry-keepers do, a broody, if scarce early in the season, it not an unknown phenomenon. Is there any way of inducing a laying hen to cease laying and start incubating? asks the novice. Unfortunately, not, though I believe many poultry-keepers believe they can hasten the broody inclination. Give the hen a clean, comfortable nest in a corner of the sleeping house, away from the door, leave two or three china eggs in it, and do not disturb the hen when on it—one can do no more than this.

"But supposing a hen turns broody; there is, the novice will find, a vast difference between a broody in winter and a broody in summer. It is an aggravating, but unfortunate, fact that, whereas in summer, when the hen is not wanted to become broody, she is a persistent sitter, and nothing but imprisonment in a coop with a barred floor will break her desires, in winter nothing is easier than to put her off the broody inclination. The reason, of course, is that, while it is natural for a hen to become broody in summer, it is not natural for her to become broody in winter. So, when she starts clucking and keeping to the nest, she wants very careful handling, or else she will change her mind. Sending her away on a railway journey is often fatal. Buying broodies is, therefore, very speculative. The only safe broody is a hen on the premises, and even she isn't safe, for a few days' sitting may convince her she does not want to rear a family of chickens yet awhile. The best nest-box is one at least 15 ins. square, and provided with a wooden front, pierced with holes to afford ventilation. It should be floorless; but if there is any fear of rats, a piece of wire-netting, 1-in. mesh, may be nailed at the buttom. There is an advantage in letting nest-boxes stand on an earthen floor—at least, it is supposed so, though I am bound to confess I have know not a few cases where excellent hatching results have followed when the eggs have been raised from the ground, and no earth placed under the nesting material.

"There is an art in making a nest, especially in winter time, when we want to keep the eggs as warm as possible. There is nothing better for the nest than straw, if well crushed between the fingers before using it; hay is softer, but it turns musty and breeds insects—at least, they seem always to appear when it is used. Dried bracken, if procurable, is excellent—just the leaves, of course, all the hard portions being removed. Indeed, it is, on the whole, better than straw; but it is not often procurable. Use plenty of the litter, first filing up the corners, and then, with the hand, beating the material down in the centre, forming a saucer-like cavity, not deep, but with sufficient incline for the eggs to lie touching each other when placed in the nest. Above all, the sides must be smooth, so that no eggs stick and get partially buried in the litter. This happens if the nest is made carelessly, and the consequence is, the egg gets chilled—and eggs get easily chilled in winter.

"The nest, of course, is made in readiness when the poultry-keeper has a hen that clucks and sticks to the nest. Let her do so for two days, at least; then, after dark, remove her to the prepared nest, lifting her quietly but firmly, with a hand over either wing, and placing her in the empty nest; put the eggs one by one under her, and leave her. In nine cases out of ten she will take to them. Be sure not to give her more than she can conveniently cover. Nine for an average-sized hen and eleven for a big one is enough, as it is important the eggs do not show from under her feathers. In summer this does not matter. Let the hen off once a day to eat and drink, and while she is off, examine the eggs to see that none are broken. If one has been broken, remove all the eggs, and wipe the stains off them with a damp rag, and also remove any stained litter. Unless the nest is kept clean, the hatch will be a poor one.

"The hen should not be off more than a quarter of an hour, and in frosty weather less. It is advisable also to cover the eggs while the hen is absent, if the wintry air suggests they are likely to get chilled. Care, too, is necessary to prevent this happening when testing takes place, which should be on the eighth day. Have a basket lined with flannel in which to lay the eggs one by one, after testing, when removed from under the hen, and return all fertile to her as quickly as possible. Those infertile should be hard-boiled and kept to feed the chickens, or they are quite good enough for puddings at that stage. Brown-shelled eggs are rather hard to judge as to fertility on the eighth day. Look carefully for the dark speck which means a live germ, and, if there is any doubt in the mind, return it to the hen, and test again a day or two later. White shelled eggs are easy to test, as they show up transparent when held before a light, the egg itself encircled with a finger and thumb.

So many of the beginners in the poultry industry make the first and great mistake in the manner in which they construct the home for their poultry. B. Arnot, in *Pigeons and Poultry*, says:

Housing should be a matter of the greatest importance to every poultry-keeper, whether it be done on an expensive scale or otherwise. Plenty of air and space for each bird are absolutely essential, and it is a great mistake to allow a number of birds to roost in one house, as if anyone of them becomes affected with disease, there is danger of it spreading through the entire flock. Supposing there is a house holding 300 fowl. It is quite evident that the majority of them would be unable to obtain absolutely pure air. The birds should be divided in small houses into flocks of twenty-five each. The actual size of the house will depend to some extent upon the class of fowl kept. The smaller breeds will not require as much space as the bigger breeds, but, as on average, it is best to allow two square feet of floor space per bird, or a house measuring 6ft. by 8ft. will allow accommodation for, say, twenty-five fowls; but on no account should they be overcrowded.

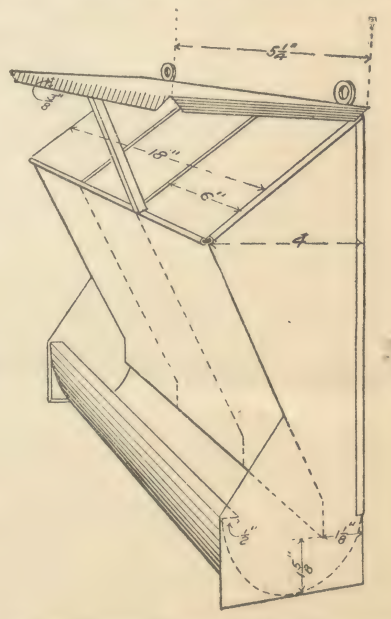
The poultry-keeper to whom space is no object will find portable houses more satisfactory than permanent ones, and it is much better to avoid using any floor at all, as then the manure falls directly upon the ground, and a good deal of labor is thus saved. The houses should be moved to fresh ground every two or three days, to prevent that factor responsible for so many diseases, namely, tainted soil.

Two-hundred-and-fifty fowls may be kept per acre, under favorable conditions. The poultry houses should be made of 1-in. boarding, and thoroughly well tarred outside. Gas-tar can be bought at 4d. per gallon, and if mixed with a little paraffin oil will dry quickly. The inside can be washed out with a solution of lime-wash—four gallons of unslacked lime to twenty gallons of water. If a small quantity of soft soap is added to the mixture it will prevent it rubbing off. The houses should be washed out inside two or three times a year to keep down the forms of parasitic life. In many poultry houses the importance of ventilation is not recognized, and under these circumstances it is no wonder that the vitality of the fowls is greatly reduced, and diseases follow. The circuation of air should be above the heads of the birds. This can easily be arranged by having a ventilating shaft in the roof.

The New Force-Feed Grit Hopper

J. E. RICE and R. C. LAWRY, *Cornell Station*

Recent experiments at Cornell, New York Station, have shown that lime and grit are required at all times by fowls for the best results as regards health and production. It is essential, therefore, that fowls should have access to cracked oyster shells or equivalent material at all times, and it seems also desirable that some other grit and perhaps charcoal should be provided. For this purpose a grit hopper was devised by the authors, which is large enough to make frequent filling unnecessary and is so constructed that it will keep clean and will not clog or waste. It is very similar in construction to the feed hopper described above, except that it is open above the trough instead of closed in. According to the authors, the cost of the hopper, which is made of galvanized iron, should not exceed $1. Figure 4 shows the appearance of the hopper and its method of construction. The rounded back and the overhanging lip in front prevent waste. The slanting top is also noticeable, as well as the eyes at the back, by which the hopper may be attached to the wall. The hopper illustrated is made in three compartments.



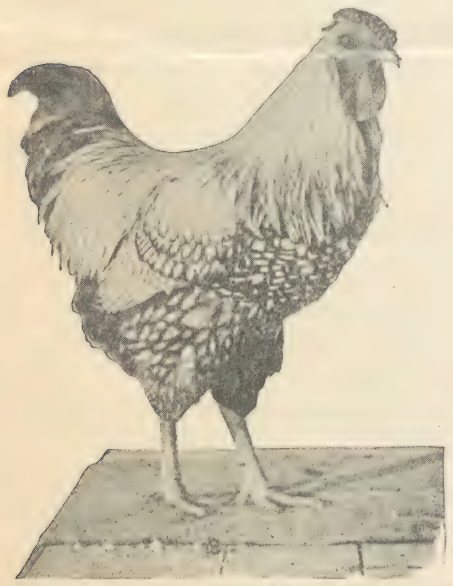


Fig. 4. The new force-feed grit hopper with three compartments.

Improvements and Defects in the Buff Leghorns as I See Them

By E. D. Cornish, Naples, N. Y.

For several years I have given this breed a thorough trial, devoting my entire time and study to the improvement of them. As I exhibit and visit from show to show, I can see a vast improvement in some parts of this breed, and can see also that they are rapidly gaining in popularity, and I will say here, that I think in a few years that the breeders of browns and whites will have to take up in the rear. For instance, at the late Rochester Show, there were 108 S. C. Buffs, 45 S. C. Browns and 69 S. C. Whites. So you see we had nearly as many buffs as we did whites and browns together. I think, in 1904, there were only about 20 S. C. Buffs exhibited at the same place, and now, as to the improvement made since that time, I think it safe to say that there was not one male bird at that time in the show showing a solid buff sickle.

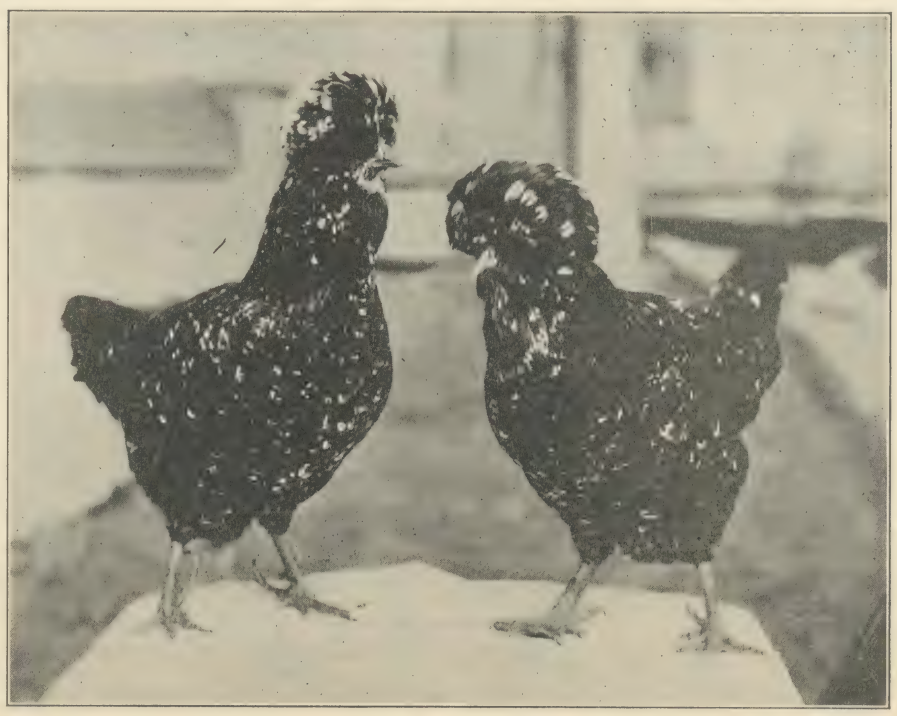
I must admit, at the one held there recently, that I found the competition very strong as to color. There was a number of specimens that were very even, and of a beautiful golden color. But the true Leghorn fancier, having an ideal Leghorn type in mind, visiting the White and Brown Leghorn aisles and finding there specimens with that beautiful concave sweep, comb following straight out from the base, and main tail and sickles very long and nicely spread, then, passing on to the Buff Leghorn aisle, finding there birds with a beautiful buff color, but with tail carried at a right angle and about three incres in length, main sickles about the same length, comb following tight to the neck and the rear end from 2 to 2½ inches in width, can easily see some vast improvements yet to be made in them.

Silver Laced Wyandotte Male. Winner of Mayor's $100.00 cup, at Scranton, Pa. Bred and raised by Samson & Alden.

It is a fact that breeders of the Buffs have paid too much attention to color and neglected the most important point, that of the true Leghorn type.

Not long ago I was asked the question by a breeder, "What shade of buff is the winning color?" And I, like the proverbial Yankee, replied by asking him one. I asked him if he had in mind any particular shade that he was trying to produce. He said he had not. "Then," I replied, "the first thing for you to do is to get in your mind the idea of a golden buff, and breed for that shade of buff." I am of the opinion that there are a great many breeders of the buff varieties that have no idea what they are trying to produce. My advice would be to have firmly in mind the color to be produced, and then to stick to that particular shade, and not to be turned by this man and that man, this judge and that judge. Then you will be sure to accomplish something. It is only another version of that old proverb, "A rolling stone gathers no moss." It is an established fact that we must have a fixed purpose in mind in order that we reach success.

During the past three years, I have made a special study on the improvement in the carriage and length of tail and also that in head gear. It is surprising to see the progress that can be made along these lines in so short a time, and if the breeders of Buff Leghorns will study along this line and improve as rapidly in type as they have in color during the past four years, then, and only then, will they stand at the head of the Leghorn varieties.



Report of American Black Minorca Club Meeting

The thirteenth annual meeting of the American Black Minorca Club was held with the Cleveland (Ohio) Show, Thursday, Januarv 30, at 2 P. M.

Mr. Frank McGrann, president of the club was absent on account of illness and Jos. P. Hilldorfer, vice-president, presided over the meeting. A large number of members were present and great enthusiasm prevailed.

The secretary's report showed the club to be in good financial condition and that it had made greater gain in membership during the year than in any previous year, having taken in 90 new members since the last annual meeting, 51 of which were admitted at this meeting. The club has offered special ribbons for the competition of its members in more than 300 shows during the fall and winter besides a silver cup in every state having ten or more members. At this annual meeting there were cash specials to the amount of $80 given from the club's treasury, besides a state cup for the club members in the state of Ohio, and several cups and cash specials were donated by individual members here and at Madison Square Garden Show.

The members present at the meeting worked in perfect unity, every resolution being passed, and every officer elected unanimously. At the opening of the meeting Jos. P. Hilldorfer resigned the vice-presidency and positively refused to allow his name to be presented for any office, though he said he had the interest of the club at heart and promised to do all he could to assist the officers to make it a still greater success. The officers elected are as follows: Frank McGrann, president; T. M. Harkness, vice-president; Geo. H. Northup, secretary-treasurer; Robert H. Armstrong, W. F. Linndenberg, Dr. R. W. Baker and O. H. Wilson, board of directors.

1st New York Pullet, 1907. 1st Boston Pullet, 1907.

At the New York Show, December, 1907, Mr. McAvoy refused $600.00 for this pair. They won 1st and 2nd as hens at the Garden. Weight as pullets 13¼ lbs., as hens 17 lbs.

Mr. E. F. McAvoy made the following winnings at the recent Boston Show: 5 firsts, 4 seconds, 4 thirds, 3 fourths and 1 fifth. The $100.00 challenge cup and $98.00 in cash specials.

The Minorca class at Cleveland was second in the show in number of birds, falling only five below the largest class—Plymouth Rocks. Undoubtedly the Minorca class would have been by far the largest class in the show had it not been for a mistake in mailing premium lists, whereby none were sent to many of our club members, a full list of whose names and addresses had been forwarded to the Cleveland Association for the purpose of having premium lists sent to them. Several members wrote me, after the entries closed, that they had prepared to make large exhibits, but had not received any premium lists from the Cleveland Association and therefore could not enter their Minorcas.

Of all the large and fine exhibit of Black Minorcas which I judged at Madison Square Garden, there were only two of the same birds shown at Cleveland—two cockerels—and a singular coincidence transpired in that the same cockerel won 2d at New York and 2d at Cleveland.

It was again demonstrated at Cleveland that the standard weights for Minorcas are not too high. I think there were one hundred Black Minorcas exhibited at Cleveland which were standard weight or above and probably the entire exhibit averaged above standard weight. At the meeting there was not a member who said anything in favor of lowering the weights.

The club meeting at Cleveland will be long remembered by the members present as a pleasant and profitable occasion and we feel that the management of the Cleveland show did much to make our meeting and the Minorca exhibit a success. The Association added $50 to our cash specials and extended to us every possible courtesy.

The Cleveland show had a large attendance daily. Exhibits were of excellet quality.

Geo. H. Northup,
Secy.-Treas.

White Plymouth Rock. 1st as cock, Washington, January, 1908. 1st as cockerel, Cincinnati, January, 1906. Owned by J. F. Defandorf.

From South Africa to Connecticut State College at Storrs to Study Poultry Raising.

When Prof. C. K. Graham called the poultry short course students together, there were five women applicants, also students from South Africa, England, New Jersey, New York, Maine, Massachusetts and Connecticut.

Guelph, Ont., Feb. 4, 1908.

L. W. Lott, Esq.:

Dear Sir:

You wil please find enclosed ad. and P. O. order for $1.00. Kindly insert twice in your paper. We find it the best paper for to sell Game Bantams.

Yours respectfully,
W. A. McMasten.

210 Edinburgh Rd.

Buff Wyandotte Club Meeting

The annual meeting of the American Buff Wyandotte Club was held at Boston, Mass., January 16, 1908, in connection with the Boston show. The meeting was a success in every way, for it brought out the largest and best class of Buff Wyandottes ever shown, the attendance of members was good and the enthusiasm unbounded. The club feels proud of its effort and the class at Boston should be an object lesson to every member. Buff Wyandottes were the third largest class in the show, and attracted a vast amount of attention from fanciers and the public in general. Let us keep up the good work and soon our favorites will fill the classes at all the shows and be where they should be, at the very front, for they are entirely worthy of the honor. The meeting of the club was called to order by the secretary, Henry R. Ingalls, as neither President Mattison or Eastern Vice-President John H. Scott were present. Motion made and seconded that Dr. N. W. Sanborn act as president pro tem.; carried. Motion made and seconded that the roll call of members be dispensed with; carried. Motion made and seconded that the names of the members present appear on the minutes; carried. The following members were present: Dr. N. W. Sanborn, Henry R. Ingalls, W. T. Lord, L. C. Piser, W. D. Foster, F. E. Rockwood, H. C. Phinney, W. L. Bemis, C. P. DeWitt, C. E. Coffin, W. S. Crandell, B. B. Chilson, L. M. Stanton, W. M. Bliss, C. S. Johnson, G. A. Coolidge, F. J. Dutcher and O. P. Chase. The report of the secretary was read. It showed the club in a very flourishing condition, with a cash balance of $154.32. Motion made and seconded that the report of the secretary be accepted as read; carried. Motion made and seconded that the reading of the minutes of the last meeting be waived; carried. The following names were offered for membership by the secretary: C. G. Hopla, Keyport, N. J.; J. H. Bronson, East Toronto, Canada; T. F. McCabe, East Toronto, Canada, George Kerner, Erie, Pa.; George C. Judson, Erie, Pa.; B. L. Waite, West Valley, N. Y.; Frank Newhall, Lynnfield, Mass.; Starr S. Booth, Briston, R. I.; V. G. Warner, Bloomfield, Iowa; L. H. Brown, Prairie City, Iowa; Hartman Stock Farm, Columbus, Ohio; A. E. Day, Winfield, Kan.; H. J. Paxton, Grove Hill, Ohio; J. E. Coen, Wingate, Ind.; J. C. Ritter, Olney, Ill.; J. D. Williams, Granville, N. Y.; Mrs. R. W. Sturtevant, Delavan, Wis.; Ralph Wiggins, St. Johns, Mich.; Charles Howison, Sandwich, Ill.; Glenn H. Burgott, Eden Center, N. Y.; Francis Lambrechts, Blue Island, Ill.; William Eldert, Detroit, Mich.; Gustave Weirt, Buffalo, N. Y.; William K. Lewis, Dry Ridge, Ky.; Henry Frederick, New Philadelphia, Ohio; C. H. Ley, Port Washington, Ohio; L. F. McLaughlin, Geneseo, Ill.; W. T. Chantland, Fort Dodge, Iowa; C. S. Johnson, East Hampton, Mass.; Fred E. Rockwood, Brookline, N. H.; C. E. Coffin, Manton, R. I.; H. C. Phinney, Monument Beach, Mass.; O. P. Chase, Andover, Mass.; R. J. Reupsch, Davenport, Iowa; Charles E. May, Bellaire, Mich.; Thomas J. Edmonds, Bristol, R. I.; George E. Perkins, Derry, N. H.; R. G. Barnes, Ypsilanti, Mich. Motion made and seconded that the entire list be accepted and received into full membership; carried. Reading of communications, the next in order, brought out only one communication, that from H. L. Hamilton, who expressed his regrets at not being able to be present, and stated that he hoped the entire set of officers would be re-elected. Motion made and seconded that Article IV of the by-laws, as follows: "The management of the affairs of the club shall be vested in an executive committee, which shall consist of five members," should be changed to read: "The management of the affairs of the club shall be vested in an executive committee, which shall consist of five members, the president, the secretary and three members to be elected at the annual meeting"; carried. Mr. Coolidge made some remarks advocating that the club do something to make a uniform rule or standard of color in both males and females. He was followed by Mr. Piser, who stated that the idea had been tried and had failed to have any definite results. He stated that awards are generally placed on other points and that to be restricted to any one shade of color would, as a rule, result in leaving the best birds out of the awards. Mr. C. E. Coffin followed and took the ground that evenness of color was more to be desired than to hold to any one particular shade of color. The birds that are even in color should win even if they varied somewhat in color from the light to the darker shade. Motion made and seconded that the officers of the year all be re-elected; carried. The officers elected are: President C. S. Mattison, So. Shaftsbury, Vt.; Eastern Vice-President John H. Scott, Auburn, N. Y.; Western Vice-President Simon Bueth, German Valley, Ill.; Secretary and Treasurer Henry R. Ingalls, Greenville, N. Y.; Members of the Executive Committee Calvin Hicks, Rockville, Md.; C. P. DeWitt, Paterson, N. J.; and James B. N. Fitch, Mt. Vernon, N. Y. Motion made and seconded that the club extend to its secretary, Henry R. Ingalls, a vote of thanks for his good work in behalf of the club; carried. Mr. Piser here made some remarks calling the attention of the members to the fact that Buff Wyandottes were the third largest class at the Boston show. He urged all members to work for the club, to write articles on Buff Wyandottes for the poultry papers and to show their birds. He also pointed out some of the defects of the breed, the principal one of which is bad combs. We should all strive to improve the head points of the Buff Wyandotte. He predicted a brilliant future for the breed and hoped the club would continue on its present sound course. Success comes only through a strong and united effort. Let all breeders join the club and all club members work for the general good instead of for their own selfish interests. Motion made and seconded that the club adjourn; carried. Adjourned.

HENRY R. INGALLS, *Secretary.*

Danbury Show

By CHAS. H. BRUNDAGE.

The exhibit of the Western Connecticut Poultry Association at Danbury, Conn., January 15, 16, 17, 18, was the smallest, as a whole, that was ever pulled off in Danbury. It was a local show, only five coops of birds being handled by the express company. The regular show dates were December 4, 5, 6, 7, but the new management did not get to work early enough, and with changing dates, showing in a very poor hall, and inexperience of the management, fanciers did not respond.

Some of the classes were extra strong, but the majority of them had no competition. There are so many poultry shows being held throughout the country that to have a successful exhibit you have got to have a live association. You have got to have fanciers at the head of it that can give plenty of time as well as money to the running of the show. Another thing to get outside exhibitors to come to your show with their birds, you have got to give them an *inducement* to come.

It costs money to fit a string of birds and exhibit them, and for that very reason breeders will show where they can get the most out of it.

We are in hopes that the real fanciers in and about Danbury will get together and have a show another season that will be a credit to our city, as they have been in the past.

The BARRED ROCK class was the leading one, there being forty-five birds shown: Cocks—Four—1st, an extra fine colored bird, with good shape and comb; 2d, losing to him only on condition, being a strong competitor for the Blue. 3d and 4th, just ordinary. Hens—Six—1st, good bird, but was misplaced. 2d was a dandy, fine in shape, extra good barring, with color to burn. 3d, full sister to second. 4th, should have won the Blue. We handled her a dozen times and liked her better each time, and while we have handled a good many, never one much better. Cockerels—Twenty in class, and this was the class of the whole show. Walking up and down looking in, it certainly was a pretty sight. Seventeen fully matured and fine colored birds, all of fine shape. 1st, an ideal bird in shape, a trifle lighter in hackle, but for barring it was straight and clear in every section down to the skin. 2d losing to him on shape only. Perfect head and comb, fine leg, with the evenest, closest color all over we ever saw on a Barred Rock male—barred even better than 1st. 3d was a rangy bird, not fully matured; he was a fine specimen for color and barring. 4th also a fine bird and worthy of his place, and it was certainly an honor to wear a ribbon in the class. Pullets—Twelve in class—1st a large, well matured bird, but very ragged in barring. 2d, large, well matured, fine shape, and with that clear, ringy bar and color. 3d was, I think, a mistake by the change of birds, an unplaced bird winning and not getting the honor. 4th, sister to 2d and much like her. Only one pen shown, but the females in this pen were extra large, well shaped birds and with quality to win anywhere. Male, own brother to 1st ckl, and a dandy.

WHITE ROCKS—Cocks—Six—1st an extra fine bird; pure white, Rock shape and a good one. 2d was close up to him, being in fine show shape. 3d, an old war horse, also a good one. 4th, good bird, but he lacks in shape. Hens—Seven—1st, extra fine, large bird. 2d, another good one. 3d, off in shape; shows some color. 4th, fine shape and white. Cockerels—Six—1st, best White Rock in show, and he had the headgear; Rock shape and snow white; a well handled bird. 2d, a full brother to 1st and was very much the same in quality. 3d and 4th, fine birds, and worthy of their positions. Pullets—Seven—1st, a daisy, and the kind you would like to own, and in a class by herself. 2d, good, fair bird. 3d, ordinary. 4th, fairly good. Pens—Three—1st in the pink of condition and was an extra nice pen. 2d and 3d, both fair in quality.

BUFF PLYMOUTH ROCKS—Here we had some extra good birds, and through the secretary not being there, A. A. Hall's exhibit was left under the benches until after the class was judged and judge gone home. But if they had been in their coop two of the awards would have been different. Cocks—Six—1st, an extra fine bird, even in color, fine in shape. 2d close up on him, being an extra fine bird. Hall's unplaced cock would have shown up with either one of them. 3d also fine bird. 4th the same. Hens—Six in class—1st and 2d were certainly fine birds; looked like sisters and had winning color; have won before. 3d was a bird of extra fine quality and would win in an ordinary class. 4th, ordinary. Cockerels—Five in class—1st and 2d won the same honors at the Middletown show week before, being in string that won State Cup in hot competition. 3d was a fine young bird of good quality. Hall's unjudged bird having quality the his birds are noted for. Pullets—Three in class, and in my opinion one was as worthy as the other, being extra fine birds. Pens—One—Being a fine lot of birds.

WHITE WYANDOTTES—Small class but a few good ones. Cocks—Three in class—1st stands out alone; in a show by himself; too good for the company he is in. 2d a fine Wyandotte and white. 3d good average bird. Hens—Ten in class—1st was great; pure white; fine shape; head and comb elegant; sold at the show for a good price. 2d, certainly a fine hen, but losing on her age, being a little past prime for the track. 3d, good bird. 4th, only fair. Cockerels—Six—1st a dandy; easy winner; rest of class just medium birds. Pullets—Six—1st was the kind I would like to own. Judge Grave came here from Boston and remarked she was good enough for a C. in Boston. 2d was an extra good one and will be heard from again. Remainder of class medium in quality.

SILVER WYANDOTTES—One Pen, and this was as fine a pen for quality as there was on exhibition. Carl Lueders being a breeder of the very best Silvers in the state.

BUFF WYANDOTTES—Ten birds being shwon; quality being very good all around.

COLUMBIA WYANDOTTES—Eight birds shown—1st ckl. best in class. Good hen and pullet; rest fair.

PAR. WYANDOTTES—Nine birds in class—1st ckl. good bird; rest of class ordinary.

S. C. BLACK ORPINGTONS—A fine string shown by Enterprise Poultry Yards of Ridgefield, Conn., R. P. Cushman, prop., who has a flock of Blacks second to none, and by the way, Mr. Cushman was made the proud father of twins during the show—boy and girl—all doing fine. Hadn't he ought to raise good Orpingtons?

S. C. BUFF ORPINGTONS—Seven birds of fair quality.

R. C. BLACK MINORCAS—Eighteen birds shown—Winning birds being birds of quality.

R. C. REDS—Ten birds shown—Some very good ones.

S. C. REDS—Seven birds shown—Winning ckl. and pullet fine specimens.

S. C. WHITE LEGHORNS—Seventeen birds—Fair birds, but not up to the standard.

BUFF COCHIN BANTAMS—Forty-eight birds—The only breed in show that filled all the classes. Ckl.—Six—First, elegant; has done it before. 2d, fine bantam. 3d and 4th were very good ones. Hens—Seven in class—First was in a class by herself. 2d, shown too much; has never been beaten before. 3d was a fine hen, and a worthy winner. 4th also a good one. Ckls.—Eight in class—1st, extra fine one. 2d and 3d about evenly matched. 4th, a trim little bird; will be much better when in condition. Pullets—Seven in class. 1st, best female in show by far, and a hard one to beat; big price refused for her. 2d and 3d, good ones. 4th, sister to same. Pens—Four—1st and 2d about evenly matched; either of then good enough to win at any ordinary show of Buffs. 3d, a pen of strong birds for quality. 4th, four hens that were extra fine shape and good color; loses on male.

WHITE COCHIN BANTAMS—Nine in show, all fine ones.

LIGHT BRAHMA BANTAMS—Four birds of good quality.

Roose Bros., who won Best Display, have won Best Display four shows this season. Sold their entire stud of Buff Cochin Bantams, including all prize winners, eggs, trade and good will to Ben Brundags, Danbury, Conn., for a long price at show, and signed contract not to breed, show or advertise Buff Cochin Bantams again for two years.

AWARDS

BARRED PLYMOUTH ROCKS—C. 1, h. 1, ckl. 3-4, E. M. Davis; c. 2, pul. 4, G. E. Brundage; c. 3, F. H. Anderson; c. 4, h. 2, ckl. 1-2, M. P. Kenney; h. 4, D. and R. Menzies; pul. 1, John Deans; pul. 2, G. E. Brundage; pul. 3, Ernest Barthol. WHITE PLYMOUTH ROCKS—Pen 1, G. E. Brundage; c. 1, pul. 2, Mrs. D. Keller; c. 2, h. 2-4, ckl. 1-2, pul. 1, pen 1, Chas. Danville, Ill.

With the week ending Jan. 4, closed the most successful show held by the Vermillion County Poultry Association, at Danville, Ill., since the State show in 1906.

The Poultry Show and Farmers Institute, which were held the same week, were valuable aids to each other, as many farmers here attending institute also visited the poultry show, while others made it a point to attend the institute after venting their enthusiasm on chicken breeding at the show.

The weather was ideal and attendance large, and a show of over 700 birds goes to show that Danville can hold one of the strongest shows in the Mid-West.

Mr. Ben. Myers, of Crawfordsville, did the judging, and while he had a big task to accomplish, did the work very satisfactorily.

Americans—A verv large class and splendid birds in nearly all varieties.

Barred Rocks led in numbers and there was very close competition in young birds, especially.

Buff Rocks led next in numbers and Whites followed closely.

Wyandottes were represented by the Silvers, Golden Buff, White and Partridge, each breed being represented by good birds; also a good show of Rhode Island Reds.

Asiatics—A good show of Buff Cochins and Black Langshans, and also some Partridge Cochins, which were handicapped by age.

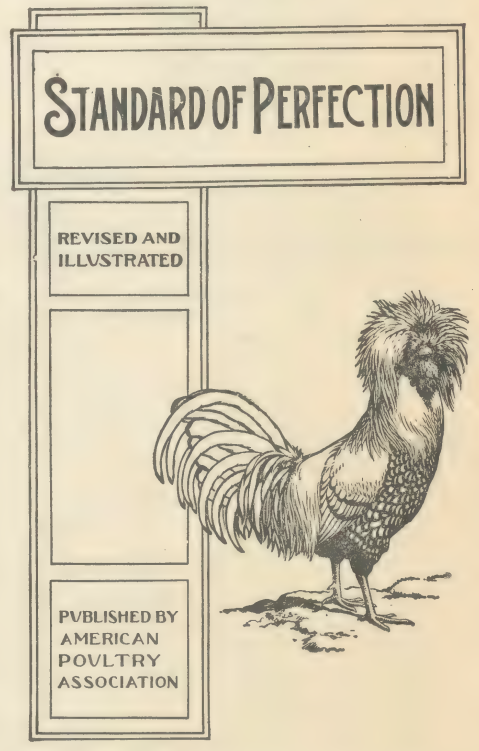
Buff Orpingtons came next in line and were represented by a good lot of birds in this variety.

Mediterraneans were represented by rose and single comb Brown Leghorns and single and rose comb Black Minorcas.

Following is list of awards:

Half Tone Plates from photographs of **your birds** will be made by the Art Engraving Department of THE AMERICAN FANCIER. Full particulars with prices furnished upon application. Artist's and engraver's work of the highest grade. Plates made within twenty-four hours after receipt of photographs.

"Rochellaise"



457 acres devoted to "Faultless" Houdans and imported Island bred "Rochellaise" Jerseys. The world's best in their respective breeds. We challenged all the noted Houdan breeders to meet our fowl at New York and Boston shows this winter. Some of them did not dare to come but we won every first and every second prize against all competitors at those two shows. 400 Houdan hens for sale that will be 2 yrs. old in the Spring. Every hen a pedigreed hen bred from trap-nest records since 1890. Every hen is sold under guarantee to weigh 7 lbs. or over and to be a "Faultless" Houdan, and to produce 5 eggs each week the balance of the Winter.

12 beautiful registered Jersey calves for sale, bred from the best cows the Island could produce.

We breed our Houdans as we breed our Jerseys—from actual test, and to-day, as great layers, they stand first.

The Rochester Exhibition

By Geo. W. Webb.

The annual exhibition of the Rochester Poultry and Pigeon Association came to a close Saturday evening, January 18th and figuring from all standpoints, the exhibition was the most successful in the history of the Flower City. The gate receipts were larger than last year, which is going some, when we stop to consider that the exclusive pigeon show was on the week preceeding the poultry show. Entries in poultry showed 200 increase over last year, while pigeons dropped about the same number, which was to be expected. Premiums were all paid as usual on the third day, which was very much appreciated by the out of town exhibitors. The out-look for next year is brighter than ever, as the management has made arrangements to secure the new convention hall, centrally located, and to coop with Empire cages. One of the features of the show this year was the Poultry Institute, conducted by Prof. Rice of Cornell. It proved very instructive to the many exhibitors present. The management of the show itself was complete in every detail, and Secretary Neuman and Superintendent Augenstein were highly complimented for the able manner in which they handled the exhibit. The only handicap Rochester experienced this year was the limited floor space and the location of the hall, which, happily will be overcome next year and every one is looking forward to 1909 as the banner year in the history of poultry exhibitions to date.

The Birds

BARRED ROCKS—Singles, 43; pens, 4. A fine exhibit. The Pullet class, 22 in number, also very strong in quality. 1st, a beauty in type and even baring; rest of winners about the average, 4th Pullet in particular. Ckls. a nice clean class—1st an easy winner in shape and under baring. 1st and 3d pens contained some grand specimens, but we were at a loss to find why 2d pen was placed—both male and females very smoky and baring uneven.

WHITE ROCKS—45 Singles and 4 pens. Ahead of last year, both in quality and numbers. 1st Ckl., a wonderful specimen in type and plumage, was also winner at Buffalo. 2d Ckl. lacks in size, but good in other points. 1-2 Hens, true rocks and pure in color. 1-2 Ckls. fit to travel in any company. Same may also be said of Pullet class.

BUFF ROCKS—Small classes, the winner doing the same stunt at Buffalo a few weeks previous.

WHITE WYANDOTTES—66 singles, 10 pens. A hard proposition to handle and a credit to the exhibitors in this class, it was a very pleasing display of this popular and magnificent variety; not only the winners, but many specimens in each class were marvels of beauty and form. We are pleased to note the progress made from year to year and the center of attraction always leads to the White Wyandotte alley. A blue or red won in this class was a guarantee that the goods was O. K. (See list of awards).

BUFF WYANDOTTES—Singles, 44; pens, 5. A battle royal for the State Cup and the strongest class in quality ever shown in Rochester. The breeders of this popular variety have made rapid strides in perfecting this beautiful breed and the rich, even surface color in many individual specimens also showed wonderful depth of under color. This places a premium on such birds and puts the breeder in the front ranks of Buff Wyandotte specialists.

SILVER WYANDOTTES—Showed full classes and quality above par. The winning Ckl. showed wonderful lacing and clean open centers and fit to travel in very fast company. Rest of class a worthy lot of birds.

COLUMBIAN WYANDOTTES—33 single and 3 pens. A representative lot of birds of this new and popular variety. It is only a question of time when the Columbians will be in the front ranks in the show room. A marked improvement was noted in every class.

PARTRIDGE WYANDOTTES held their own in Rochester and classes were filled to overflowing. The females exceptionally strong, showing Hen and Pullet the acme of perfection in both shape and penciling.

S. C. RHODE ISLAND REDS—45 single, 5 pens.

R. C. RHODE ISLAND REDS—33 single, 4 pens—Exhibitors in these classes had no cause to kick for lack of company. It took quality to win, even to a fifth ribbon. A good Red is a bird of beauty and any lover of this breed would have dug pretty deep to have secured the first R. Comb Ckl. and first S. Comb Pullet, the finest we have hit up to date.

BLACK MINORCAS. While not overcrowded, contained some fine specimens, both in Single and Rose Combs, the latter having a little the best of it in quality, at the same time showing grand size, which is unusual in the R. C. variety.

SINGLE AND ROSE COMB WHITE MINORCAS—Small classes, but quality good.

S. C. WHITE LEGHORNS—62 in single class—The popularity of the breed was well illustrated in the fine exhibits made in this class. Quality was not lacking anywhere and enough good birds was left out of the winnings to make a respectable showing by themselves. ROSE COMB WHITES, while shy in number, were there in quality. S. C. BUFF LEGHORNS—63 Singles, 9 pens. Something doing all along the line, and an exhibit long to be remembered in Rochester. A combination of Jamestown, Madison Square and Buffalo winners, with several dark horses on the side that proved very troublesome, the interest was at fever heat until the awards was placed, when Madison Square showed a clean pair of heels and secured the cup, of which the permanent owner will be decided next year.

S. C. BROWN LEGHORNS—The showing in Browns this year was far in advance of last year. This breed is an old favorite in Rochester, and the brown leg of the present, a beautiful creation of feathers and flesh, is a pleasing sight to behold. ROSE COMB BROWNS, while not so numerous, showed good quality, but lacked the richness of color we find in the S. C. variety.

LIGHT AND DARK BRAHMAS, were fairly represented in number, and the quality of the winners was beyond question. We only have to refer to the awards.

BUFF COCHINS—A fine bunch in the blue and deserving of special mention.

BUFF AND WHITE ORPINGTONS made a good showing, with the Buffs in the lead, both in number and quality. The Buffs showing full classes and competition very keen.

HOUDANS—What Houdans lacked in numbers were made up in the quality of the 1st Cock, Hen, Cockerel and Pullet.

BANTAMS—While not crowded with entries, showed excellent quality, particularly in Buff and Black Cochins, Black Breasted Reds, Brown-Reds and Golden Duckwings.

WATER FOWL—While the exhibit in this class was not what we would like to have it, still the quality of the goods produced showed the real thing, notable Pekin and Colored Muscovy Ducks, which would be hard to equal at any show. We also wish to call attention to the exhibit of Bronze Turkeys, although competing alone could have stood a lot of competition and come out with flying colors.

Some Things We Noted

Charles Augenstein, the only "Angy," demonstrated the fact that he not only knows how to superintend a poultry show, but he led the boys in a walk, capturing the State Buff Wyandotte Club Cup.

—

H. F. Hilderbrandt and Elmer Oliver made it quite warm for the boys in Barred Rock Alley. Oliver in Cockerels, and Hilderbrandt in Pullets, they certainly were warm ones.

—

J. Thomas Harp & Son were not satisfied to trim the Buffalo exhibition in White Rocks; as a result a few Rochester scalps adorn their wigwam, and good ones, too.

—

Geo. M. Benham of Canandagua, thought it was like taking candy away from the baby in the Barred Rock alley, so he entered for exhibition only. George has the goods, but he prefers to let his customers win.

—

We were pleased to see so many Buffalo exhibitors, among who was Edward G. Greth, showing White Wyandottes. His 1st Ckl. rightly deserving the place he got, and that's going some in a class of 21.

—

Among other White Wyandotte exhibitors was Fred. Lisk, of Ramulus, capturing 1st Hen, 2d Ckl., 1st Pen and 2d Pul., and Mark Sailor, of Warren, Pa., 1st Pul., 2d Pen., who also made a clean sweep at the Warren, Pa. Show in a class of 28 singles.

—

A glance at the list of awards shows the quality of Silver Wyandottes bred by Le Roy W. Seigfried, of Waterloo. The class was a hot one, and 4 firsts, one 2d and one 4th on 6 entries speaks for itself.

—

L. B. Sweet, of Perry, and L. J. Pape, of Rochester, divided the honors in Columbian

—

Wyandottes, each showing some grand specimens, and worthy to compete at the representative shows of America.

—

Complimentary remarks from all sides were heard about F. A. Newman, the hard working Secretary of the Rochester Show, and the Association ought to congratulate itself in securing the services of a secretary of Mr. Newman's ability and willingness to perform; he was always on the job.

—

The Pigmy Pouter, otherwise known as Fred Guenther, performed the difficult operation of placing the awards on Silver, Golden and Columbian Wyandottes without a kick. Mr. Guenther is an old breeder and exhibitor of Wyandottes, and we think he ought to branch out a little and give other associations the benefit of his experience. Specialty Wyandotte judges are few and far between.

—

Another past master of Wyandotte fame is Herr J. F. Fallinger, who devotes himself exclusively to Partridge Wyandottes of the proper type, as the list of awards show, and ducks that roost, but never quack, even refer to his blue ribbon Muscovys that were the pride of Duck Alley.

—

For five years, M. V. Allen has swept the deck at Rochester in R. C. Black Minoras. This year he make good as usual, five firsts in competition.

—

We were glad to see H. L. Watts come back again this year with his White Leghorns. In a class of 20 Pullets he was 2d with a fine specimen of this beautiful bred.

—

The banquet Wednesday evening was a pleasing affair, and the stubs and white faces very noticeable in the White Leghorn alley a little earlier in the day entirely vanished when it came to a show down of good music, humor and plenty to satisfy the inner man.

—

E. M. Halpin, of Mortimer, N. Y., has one of the best laying strains of White Wyandottes we know of. His 3d Pen in a class of 10 Pens, showed a strong combination of exhibition and layers.

—

Cook & Underhill called the turn in the Brown Leghorn Alley with 1-3 Ck., 1-2 Hen, 2-3 Pul., 1-3 Ckl., 1-2 Pen in a class of 46 birds, and plenty of good birds went beging.

—

I. L. Davis always gets his share in Buff Orpingtons, and this year was no exception. The rich, even color of his birds show he has mastered the mating problem.

—

Speaking about Houdans, makes me think of G. S. Marsh of Cuba, see awards.

—

Complete list of awards was published in the February 1st issue.

BUFF WYANDOTTES

My birds at Boston, Jan. 1908, in the hottest class of Buffs ever shown, won the following:

12 Entries. 1st Cock, 4 and 6 Hens, 6th Pullets.

All these PRIZE WINNERS are in my breeding pens.

¶ Egg orders booked now from my best pen headed by first Buff Wyandotte Cock, Boston, $5.00 per 15. Other choice pens $2.00 to $3.00 per 15.

STUART A. HOWLAND,

(*Riddell Champion Strain.*) Gransville, N. Y.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

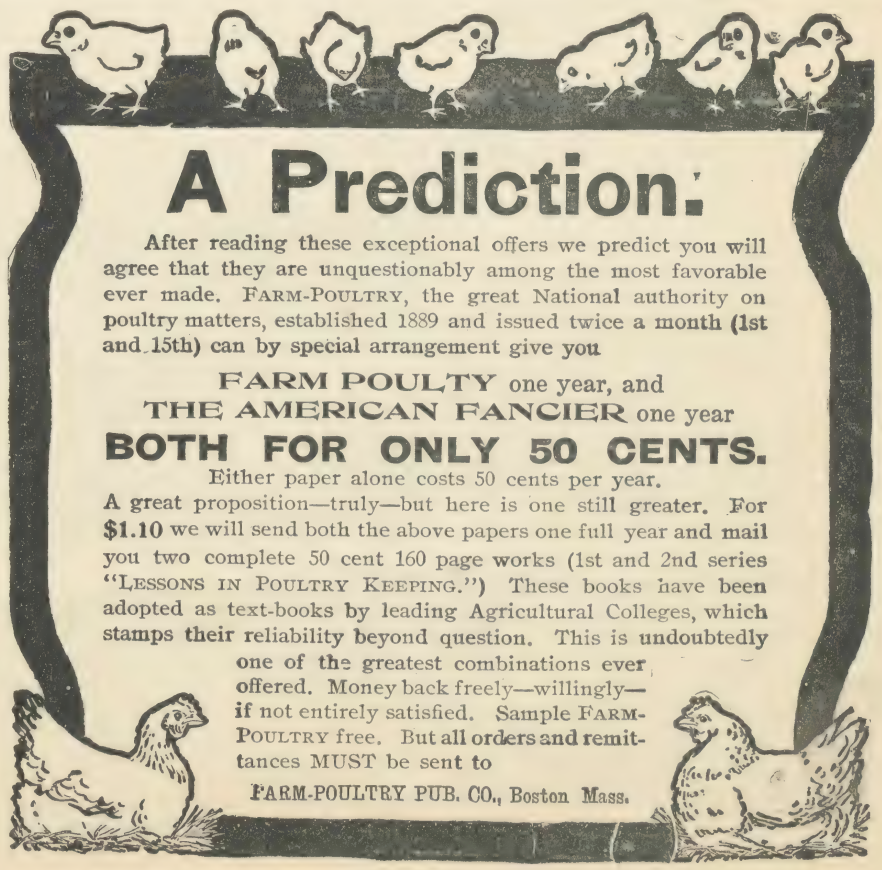
PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE



resident, American Houdan Club, From 1900 to 1907.

VIRGINIA HOMES

IF you are looking for an even climate, no extremes, long pleasant summers, never a prostration or a sunstroke; short and mild winters, either to do successful general farming or raise all kinds of fruits, berries, garden truck, poultry, peanuts and cotton, so to say, the largest variety of crops profitably, or for a change to recuperate from long, cold winters and regain health, send 10c. for a six months' subscription to the

VIRGINIA FARMER

BOX 709, - - - EMPORIA, VA.

A Prediction.

After reading these exceptional offers we predict you will agree that they are unquestionably among the most favorable ever made. Farm-Poultry, the great National authority on poultry matters, established 1889 and issued twice a month (1st and 15th) can by special arrangement give you

FARM POULTY one year, and
THE AMERICAN FANCIER one year

BOTH FOR ONLY 50 CENTS.

Either paper alone costs 50 cents per year.

A great proposition—truly—but here is one still greater. For **$1.10** we will send both the above papers one full year and mail you two complete 50 cent 160 page works (1st and 2nd series "Lessons in Poultry Keeping.") These books have been adopted as text-books by leading Agricultural Colleges, which stamps their reliability beyond question. This is undoubtedly one of the greatest combinations ever offered. Money back freely—willingly—if not entirely satisfied. Sample Farm-Poultry free. But all orders and remittances MUST be sent to

FARM-POULTRY PUB. CO., Boston Mass.

The AMERICAN FANCIER

ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry, Pigeons, and Pet Stock

LEONARD W. LOTT Editors HARRY M. POCKMAN

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued, he must notify this office and send the amount in payment for same. If this notice is marked with a large blue "X" it means that the subscription has expired. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Published by

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

THE illustration on the title page of this issue, represents the Buff Wyandotte Cock, 1st at Boston, 1908, owned by Stuart A. Howland, Granville, New York. We know of no better way to describe this bird than to quote Henry R. Ingalls, judge at Boston, in the February 1st issue of this publication: "He is a very large bird of fine style, good condition, shows up well in the coop, very nice shade of color, and quite even in surface and strong in under color. Very clean wing and tail. He stands out as the best bird in the class and won easily."

* * *

American Dorking Club.

The annual meeting of the American Dorking Club was held in Mechanics' Building, Boston, January 18th, 1908. The following officers were elected for the year: President, Henry Hales; first vice-president, George B. Inches; second vice-president, M. R. Jacobus; third vice-president, John S. Cope; secretary and treasurer, Robert Officer.

Your's respectfully,
ROBERT OFFICER,
Secretary.

North Grafton, Mass.

A Western Letter From Judge W. C. Denny.

Seattle, Washington, Jan. 20, 1908.
Leonard W. Lott & Co.,
New York City.

Dear Sirs:

Here I am on the opposite side of the Continent to judge the Seattle Show. Have just arrived from N. Yakima, Wm., a city of 10,000, in the Southern centre of the State. The show there was a big success, every way. It was really astonishing to me, was there last year, to note the very marked improvement in quality and condition. They are learning their lessons in exhibiting rapidly. Some very good Buff Rocks, White Wyandottes, Buff Wyandottes, Buff Leghorns, and if some of my Eastern friends had the opportunity of examining the extra good S. C. R. I. Reds and White Leghorns, they would be quite surprised. Brown Leghorns, also, were very good. The show was uniformly cooped and well classified.

Here they have the largest show ever held on the Coast. All classes are well filled, Barred Rocks leading with 169 birds, and if any birds have been shipped here to win, unless of the very best quality, the breeder will be surely disappointed, for nothing but the best will do. All the Leghorn classes are fillled with extra nice birds. Orpingtons, Buffs and Blacks are very popular here, in fact more so than at any other show I have judged this season, except New York.

Sincerely,
W. C. DENNY.

* * *

Mill View Farm won 2d and 4th hen, and 5th cockerel, White Wyandotte at Rochester, instead of C. W. Tripp.

Second Annual Exhibition at Heuvelton, New York

The second annual show of the St. Lawrence Poultry Association brough together 837 birds, equal in quality to those shown at any exhibition in the State, outside of Madison Square Garden. This was the verdict of those who have attended many in different parts of the State, and are in a position to know.

104 Barred P. Rocks from the best breeders of Northern New York and Canada made it a class where anybody was winner until the ribbons were placed, they were so even in quality.

88 R. C. and 54 S. C. R. I. Reds made other hot classes, with quality running high. White and Buff Wyandottes were about even in number of enteries—50 of each—and brought together many birds that have been winners in several States. Grand, even classes, and many birds that would prove themselves worthy of ribbons in most shows were left outside the winnings.

Of the 78 S. C. White Leghorns shown, there were many very excellent specimens, and those who made a winning may feel proud of their stock and efforts. Columbian Wyandottes, S. C. and R. C. Black Minorcas were well filled classes, with fine quality winning in every case. In fact all winners were obliged to be worthy of the blue, on account of strong competition.

Their official catalogue containing a complete list of winnings and entries was placed before the public on the third morning of the show.

All premimums are paid, and even now they are at work to make their third annual show larger and better than ever.

What Others Say

Sold $230.00 in Three Weeks

Geneseo, N. Y.

AMERICAN FANCIER, New York.

Gentlemen: I wish to say that THE AMERICAN FANCIER has sold $230.00 worth of stock for me within the past three weeks, and I am answering AMERICAN FANCIER inquiries every day. No more stock for sale.

Very truly yours,
WM. L. HOWELL.

Sold All Through Ad.

Granville, N. Y.

AMERICAN FANCIER, New York City:

Gentlemen: I have received orders for all my surplus stock through the ad. in your paper. Think it money well invested.

Yours Respect.,
CHARLES ANDRUS.

Sold All the Bantams

Yonkers, N. Y., Jan. 9, 1908.

I enjoy your paper more than any other, and from a little classified ad. that I inserted a few weeks ago, I sold all my Bantams, and am still receiving answers to it almost every day, although the ad. only appeared twice.

Yours truly,
MRS. EDWIN BROWN JENKS.

A Dandy Paper

Port Clinton, Ohio.

Messrs. L. W. Lott & Co., New York City:

Gentlemen: Find enclosed 50 cents for renewal subscribtion. You are getting out a dandy paper. Keep it up. Best wishes. I remain,

Yours respect.,
SYLVESTER SHIRLEY.

Please Stop My Ad.

Lakewood, N. J., Dec. 6, 1907.

Dear Sirs: Will you kindly stop my ad. in the FANCIER for a while, at least, as I have sold all the Pigeons.

Yours sincerely,
CARL WENTZIEN.

Danbury, Conn., Dec. 27, 1907.

Leonard W. Lott & Co., N. Y. City:

Dear Sirs: Your paper is certainly a wonder for a business getter. I shipped to-day three Pens Golden Wyandottes to Virginia. Two Pens to Manitoba, Canada, one Pen to Ann Arbor, Mich., all Golden. White Ckl. to Mt. Vernon. And all sold through my class ad. in THE AMERICAN FANCIER. I want you to know what you are doing for me. Wishing you success, I am,

Most sincerely yours,
C. H. BRUNDAGE.

Pigeons Sell in The Fancier

Syracuse, N. Y., Dec. 9, 1907.

Dear Sir: I am sure THE AMERICAN FANCIER has a good wide circulation as I am receiving inquiries from many states, and sold most all my surplus stock.

Very truly yours,
C. A. DAVIS.

The Best of All

Amsterdam, N. Y.

Your semi-monthly is the dandy of them all.
W. C. MOAT.

Lockport, N. Y., Jan. 7, 1908.

Dear Sirs: Enclosed find payment for my ad. Please put it in as soon as possible. I shall give you my ad. right along as I think your paper best of any.

J. T. BIRD.

Augusta, Ga.

Gentlemen: Enclosed please find 50 cents to cover subscription to the FANCIER. I am delighted to see the dear old paper again. To my mind it is the very best published, and I hope to be a subscriber for many years. With best wishes, yours faithfully,

DR. W. C. CLECKLEY,
President Augusta Poultry Association.

Millersville, Pa.

Dear Sirs: The ad. has sold nearly all the Reds already. Made one shipment to London, Canada. Will send a new one for about January 15th issue.

I am well pleased with the results obtained through THE AMERICAN FANCIER.

LEWIS O. MAYER.

Edgewater, N. J.

Messrs. L. W. Lott & Co., New York City:

Dear Sirs: Enclosed please find 50 cents subscription for your paper. I have been a reader of it for a number of years, it being the most up-to-date poultry journal published.

Yours truly,
CHAS. H. RICE.

Dear Sir: What will you charge for printing 500 postals with half-tone? My ad. in THE AMERICAN FANCIER sold all birds I offered. Received $72 in checks and money orders which I returned on account of not having the stock. When I have more stock will know where to advertise.

Yours respectfully,
EARL R. COE,

Jersey City, N. J.

Quality of Circulation

Brattleboro, Vt.

Messrs. L. W. Lott & Co.,
108 Fulton Street, New York City:

Gentlemen: Will suggest that for Games and Bantams the FANCIER has proven very satisfactory as an advertising medium. The fancier is the man who will buy good stock and pay what it is worth.

Yours truly,
F. D. E. STOWE.

Wants The Fancier in England

Boothstown, Lancaster, England.

Dear Sirs: Having taken THE AMERICAN FANCIER in the U. S. A., now that I am over here I should like to continue to have it, knowing that your paper gives the best information.

J. LITTLE.

Sold All Through Ad.

Granville, N. Y.

Gentlemen: I have received orders for all my surplus stock through the ad. in your paper. Think it money well invested.

Yours respect.,
CHARLES ANDRUS.

Danbury, Conn., Feb. 10, 1908.

I sold all my surplus stock from my advertisement in THE AMERICAN FANCIER, and could have sold twice the amount had I had them. Have had inquiries from a good many states and they still keep coming.

Very respectfully yours,
H. A. PETTIT.

CREIDER'S
Fine Poultry Catalogue

for 1908 illustrates and describes 60 Varieties of Poultry, Pigeons, Ducks, and Geese. Printed in beautiful colors, with 10 handsome chromos pretty enough to frame. Tells all about best Louse Killer; practical poultry houses and equipment, how to build them, how to cure diseases, make hens lay and yield good profits. Gives prices of breeding stock and eggs, which are within reach of all. Book worth far more, but sent postpaid for only 10 cts.

B. H. CREIDER,
Rheems, Pa.

Lenox Show

The Fourteenth Annual Exhibition at Lenox has come and gone, another success in every way. Some classes a little light, but there was quality just the same, Rhode Island Reds in the lead as to number. Barred P. Rocks a close second; White Wyandotte and White Leghorns fine classes. Orpingtons had some very fine birds. 1st Cockerel one that would be hard to beat. The Ckl. at head of Barred Rock Pen was a peach, and the same may be said of White Wyandotte Pen. We also noticed a very fine S. C. Black Minorca Pullet. Buff Rocks some corkers but no competition. The first White Leghorn Hen was about as good as you would wish to put your lamps on. A very fine S. C. Brown Leghorn pullet was shown. In the Game Bantams there was another lot of corkers, especially some of the Birchens and Pyles made me feel that I ought to go at them again. I notice some of these are winners at Boston this year. The first pair of Pekin Ducks top notchers, and the same may be said of the African Geese and some very fine pairs of Turkeys.

Judges F. Crangle, C. H. Shaylor, Jas. Kelly and Mr. Tracy, the red man, placed the awards to the satisfaction of all exhibitors.

PEARL GUINEAS—Tyer.

Houdans

Mr. A. E. Jones, Elkland, Pa., writes and encloses us the following, a part of his 1906 catalogue:

A Houdan, if pure bred, is as tough and rugged as a dung-hill and as active as a Leghorn. They are as densely feathered as a Cochin and as heavy-bodied as a Rock or Wyandotte. There is no fowl that possesses the natural qualifications for heavy egg production, especially in Winter, as these Houdans do. They have nothing to freeze—no combs, no gills—and they are alive every minute of the day. They positively never set, and will lay in a cold, changeable Winter in unheated coops, when all other breeds stop. The Houdan from one day to extreme old age is rugged, hearty, healthy, vivacious, and they breed very true, hardly any culls. Especially is this true in color, and they will keep their color for years.

Mr. Jones is a breeder of high grade Houdans only, as evidenced from a cut of some of his birds which will appear in our next issue, and from what he writes.

His egg customers, he says, have all been more than pleased with the results they got; getting good percentage of show fowls from only a few eggs.

His "Three Graces" are said to be three of the finest Houdans ever produced in this or any other country.

The birds of Mr. J. H. Grant, Coudersport, Pa., did not reach Rochester in time for the Show. This, we believe, is due to some error on the part of the express company. We have been requested by the Secretary of the Rochester Show to publish this, in fairness to Mr. Grant, otherwise, as Mr. Grant does not appear as a winner, the impression might be unfair.

MAKE YOUR OWN CUT GREEN BONE

It's a very easy, simple operation with a CROWN Bone Cutter. Green bone makes eggs, and stimulates the hen's productive organs. Cut bone fresh every day. The Crown does it quickly with no bother or muss. 25 years building cutters. Write for free catalog.

HENS TEETH ARE NOT SCARCE

The question is—What kind to furnish. You can't afford anything cheaper than **Maka-Shel Grit.** Keep it before your fowls, scatter it in the litter. They'll find it. It is white, sharp, clean, uniform in size, free from trash. It's economical because it lasts so long. It keeps its edges and grinding points till dissolved. Contains Lime, Soda, Iron, Magnesium. All these help to build up flesh and bone, and make eggs. **Maka-Shel** supplies what food does not. Send 50c., coin or stamps, for 100-lb. bag now. Booklet, "Hen Dyspepsia," and sample—free.

EDGE HILL SILICA ROCK CO. Box I, New Brunswick, N. J.

Typical Saddle Fantail owned by Havemeyer Bros.

ALTHOUGH the weather is far from being ideal for mating, now is the time to pair your birds in most sections of the country.

The first two or three weeks are not the ones that are dangerous with the youngsters, for as long as the parent birds can sit over them day and night they are safe. When, however, they are about the latter age, or a little more—just getting too big for the parents to comfortably cover, not sufficiently feathered to ensure warmth enough for themselves, then, should cold weather set in at this stage, then is the dangerous time. Much may, it is true, be done in the way of protecting them from the cold, and sometimes successfully, yet the chances are all against them, unless the breeder is well versed in their management.

But it is not only the youngsters, but the stock birds themselves which in too many cases suffer, and this in more ways than one. The cause of leg-weakness, egg-binding and general out-of-condition state is brought about at this time, which is due to lack of stamina.

Only mate those in the best of health—no ailing, sickly, or even delicate birds should be used. Neither should any trace of canker, roup, or similar diseases be traceable in them, or even in their ancestors, for such will appear even generations after.

The mating is a most important time, as here is where the skill of the breeder is put to test. Improvement can only be made where proper matings have been made. During the show season of 1907-1908 we could hardly see any improvement in most classes. Why? Because the careful attention was not given them the last breeding season. Don't be afraid to separate and remate during the breeding season if satisfactory results are not produced in the first mating, but remember it is quality, rather than quantity which makes the season a success.

Breeding is generally, however, acknowledged to be a great uncertainty, no matter how carefully the birds may be paired nor how good the stock may be. Bad points will come out far more persistently than the good ones, but in the end, if bred to a system, nature must give way and the desired points cannot help developing. Now, from these undeniable facts it must be obvious how important it is to breed that which is systematically bred, and has as few of the bad and undesirable points as possible in their blood.

* * *

The second annual exhibition of the Philadelphia Association was held January 21-25.

The pigeon entry numbered 918 in the open classes.

Carriers, Dragoons and Homers formed a large percentage and although the other varieties were represented the competition was in most instances light.

Dragoons are a variety which have come to prominence and at this time are certainly well established.

* * *

The week of February 17-22 Pittsburg will hold the last show of the season. A. J. Edwards will judge and will probably draw a large entry.

* * *

During the past few months it has been amusing to read in different publications the reports on the classes. It appears the writer never intended to criticise the judging but rather agree in all instances with awards. In one or two classes at the recent large shows some bad decisions were made. But the report had it the best bird won. Well, we suppose it don't matter.

Rochester Pigeon Show

By C. A. Davis.

The Rochester Pigeon Show was held Jan. 6-11, 1908 in Lathrop's' bird store, an ideal place for an exclusive Pigeon Show. A fine display of nearly 700 pigeons were brought together, the quality in many cases being the finest in the country. About 200 entries were rejected as the exhibition hall was not sufficiently large enough to accommodate such a large entry. There was over 210 specials offered, including 6 silver cups, and a silver spoon. The banner class was the Working Homers, nearly a hundred were on exhibition. Then came the Swallows, and the Fantails and other varieties. Rochester has a jolly bunch of enthusiastic fanciers, and I see no reason why the next show ought not to surpass all past records. I have noticed that many of the birds that were shown at Rochester have held their own at the last Boston Show.

AWARDS

POUTERS—51 very good birds shown; most of them good on legs; good markings and fine blowers. BLACK—C., 1-4, Wm. C. Baumgartner; 2, John Knack; 3, C. Mariotte. H., 1-2, Baumgartner; 3, Knack; 4, Mariotte. Y., 1, Mariotte. BLUE—C. 1-2-3, Knack; 4, Mariotte. H., 1, Voss; 2, Baumgartner; 3, Knack. Y., 1, Baumgartner; 2-3, Taubert; 4, Voss. YELLOW—C., 1, Taubert; 2, Hoos, Jr.; 3, Knack, 4; Baumgartner. H., 1, Taubert; 2, Knack; 3, Voss; 4, Baumgartner. Y., 1-2, Hoos, Jr.; 3-4, Taubert. RED—C., 1, Voss; 2, Knack; 3, Baumgartner. H., 1 and Silver Cup, Voss; 2, Knack; 3, Baumgartner. Y., 1, Mariotte. WHITE—C., 1-3 and Silver Cup, Baumgartner; 2, Voss. H., 1, Mariotte; 2-3, Baumgartner. Y., 1-2, Baumgartner.

PIGMY POUTER—20, not so good in quantity, but the quality was the best, and the competition the hottest. The first Red Hen, owned by Mr. Mariotte, was a corker, nice, small, dancing, little Pigmy and full of action. This bird won first at Boston, the week after, which shows the quality of birds Rochester can get together. The young Silver Pigmy Cock owned by the same man, won first and the Silver Cup for the best Young Pigmy; another nice one, which can also hold its own in good company. The Blue Pigmy Cock owned by Mr. Hipkens was given second best Pigmy in the show; he was very slim, fine on legs and a good blower. BLACK OR BLUE—C., 1-3, E. F. Hipkens; 2, Mariotte. H., 1, Hipkens; 2, Mariotte. Y., 1-2, Mariotte. WHITE—All to Mariotte. A. O. C.—C. 1, Mariotte. H., 1-2, Mariotte; 3, Hipkens. Y., 1-2, Mariotte; 3, C. A. Davis; 4, E. F. Hipkens.

BARBS—5 Barbs shown, very nice ones; good color and heads. All to H. and J. G. Smith.

DRAGOONS—There were 52 Dragoons shown; the quality in many cases being very good. BLUE OR SLIVER—1-2, H. and J. G. Smith; 3, Fred Herr; 4, Kleinke. H., 1-2, Smith; 3, Herr; 4, Kleinke. Y., 1-2, Smith; 3, Voss. RED—C., 1, Smith; 2, Herr; 3, Geo. B. Smith. H., 1, Smith; 2, G. B. Smith; 3, Herr. YELLOW—C., 1, Smith; 2, Herr. H., 1, Smith; 2, Herr. BLACK—C., 1, Carroll; 2, Voss; 3, Herr; 4, Kleinke. H., 1, Kleinke; 2, Hipkens; 3, Herr. Y., 1, Hipkens. WHITE—C., 1-2, Smith; 3, Kleinke; 4, G. B. Smith. H., same. Y., 1, Smith. A. O. C.—C., 1, Voss; 2-3, Smith H., 1-2, Smith; 3, Voss. Y., 1-2, Smith; 3-4, G. B. Smith.

ARCHANGELS—All to Norman Hill.

SWALLOWS—70 were shown, including some very fine specimens, which can hold their own at other large shows. BLACK BARLESS—C., 1-3-4, Henry Uhl; 2, A. Samuels. H., 1-2-3, Uhl; 4, Samuels. BLUE BARLESS—C., 1, Samuels; 2, Kircher. H., 1, J. Kircher; 2, Samuels. RED BARLESS—C., 1-2-3, Uhl; 4, August Eckert. WHITE BARRED, BLACK OR BLUE—C., 1-2-3, Leonard Lang; 4, Eckert. H., 1-2, Lang; 3, Wm. Ehrhardt; 4, Eckert. WHITE BARRED, RED OR YELLOW—C., 1, Samuels; 2, Eckert; 3, Ehrhardt; 4, Kircher. H., 1, Eckert; 2, Ehrhardt; 3, Samuels; 4, Kircher. BLACK BARRED—C., 1, Buckley & McDonald; 2, Kircher. H., 1, Kircher. FAIRY SWALLOWS, A. O. C.—C., 1-2, Samuels; 3-4, Ehrhardt. H., 1-2, Samuels; 3-4, Ehrhardt.

TURBITS—30. Some of the best in the country were to be shown, but failed to arrive; these being Mr. T. J. McIntyre's birds, we suppose he didn't send then on account of the Boston Show being on the next week. We hope he will be with us next year. Those which were shown by Mr. Voss were very nice, little birds, being very short in face and good markings. BLACK—C., 1, John Voss; 2-3, Miller. H., 1, Voss. BLUE—C., 1, Voss. RED—C., 1., Voss; 2, C. A. Davis; 3, Herr. YELLOW—C., 1-2, Miller. H., 1, Holroyd. A. O. C.—C., 1-2, John Voss. H., 1-2, Voss. Y., 1, Voss.

OWLS—26.—All to Herman Irrig; a fine lot of nice, little fellows, which were a credit to the show.

ORIENTAL FRILLS—5—Made a poor showing, but the quality was fairly good. We hope to have the quantity also with us next year. SATINETTES—All to Henry Uhl. SILVERETTES—All to C. Mariotte.

MUFFED TUMBLERS—22—Many of which were very fine, nice long muffs and good heads. BLACK—C., 1, Howard J. Young; 2, Mariotte. H., 1, Mariotte; 2, Young. RED—All to Graboskey Bros. YELLOW—All to Herr. WHITE—All to Young. BLUE—C., 1, Mariotte; 2, Young; 3-4, Graboskey Bros. H., 1, Mariotte; 2, Young. SILVER—All to Graboskey Bros.

GOUVERNEUR, NEW YORK

3 Great Books FREE.

We have just succeeded in completing with a book publishing house one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the authors of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list we selected, after careful deliberation, the twelve novels which have been found to have proved most phenomenally popular. For interest-riveting mystery, daring adventure, love and thrilling romance no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, the AMERICAN HOME MAGAZINE. This big, new periodical has drawn upon all the almost unlimited resources of a great publishing organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, and screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvelous creations of those master minds of mirth and fun —Opper, Dirks, Bunny, Outcault, and all the rest. Of the magazine's great editorial writers only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvelous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new monthly. For the strange, the bizarre, the unlike, the fascinating, read the brilliantly interesting new AMERICAN HOME MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme.)
No. L37. The Love That Saved Him. (Mrs. Stephens.)
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No. 34. My Mother's Rival. (Braeme.)
No. 6. Lany Gwendolin's Dream. (Braeme.)
No. 26. The Bride of an Hour. (Stephens.)
No. 16. Beauty's Marriage. (Braeme.)
No. 35. Farmer Holt's Daughter. (Garvice.)
No. 25. A Maiden All Forlorn. (Duchess.)

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—AMERICAN HOME MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

PEDIGREED HOUDANS

Bred fron highest scoreing and egg record stock. All from 265 and up records, and winners in all the leading shows of the nation, and progeny my "Three Graces."

Write for catalogue and testimonials from those who have had stock and eggs from me.

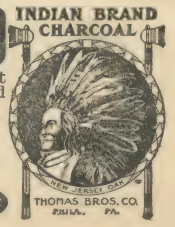
In Philadelphia show, January, 1908, a customer won first and second on cockerels, first and second on pullets selected from thirteen chicks hatched July 6th from my eggs; also winning other prizes including silver cup for best display in strong competition.

A secretary for a great eastern poultry show writes, December 12th, that seventeen chicks from my eggs, hatched August 24th, averaged over four pounds, and that a Hondan judge said they were the best 17 Houdans he had ever seen in an unculled flock. This party has adult fowl from me that he says are the finest he has ever seen.

Guaranteed eggs from pure Dorking type fowl; no Creve or Polish blood in their veins.

A. E. JONES, Elkland, Pa.

Vice-President National Houdan Club for 1908.



CHARCOAL HELPS SICK FOWLS

Not a poison or drug, but an absorbent, filter, corrective. Most fowls die from diarrhea, loose bowels or irritated crop and gizzard, etc. Charcoal absorbs gases and neutralizes fetid sourness of fermented food. A flock so afflicted usually improves when given **Indian-Brand Charcoal,** dry or in mash. It's clean. Six different sizes for chicks, hens, pigeons. Send $2.00. We will forward **freight paid** 100 lbs. Special prices in 500 and 1000 lb. lots. **Sample free.** Write to-day.

VOL. XXVIII NEW YORK CITY, MARCH 1, 1908. No. 698

The Prospects of the Plymouth Rock

By WILFRID H. G. EWART

IT will be generally agreed that the last thirty years have seen many changes in the poultry Fancy in this country, and in other parts of the world. During that period many new breeds and varieties of breeds have been brought before the public; idols, too, have unceremoniously been dashed to the ground; old associates, to whose presence we have tacitly become accumstomed, have found themselves in strange, unwonted surroundings, more often than not at an uncomfortably low ebb. Events of this kind come and go so quickly that their aftermath leaves us perplexed and in a consummate quandry as to what to do next. Perhaps a Buff Cochin comes along, or a Buff Orpington. Then our work is cut out for us for the time; but sooner or later we get back to the same mark, and there is a lull until somebody gets restless and produces a new breed.

For thirty years and more the Plymouth Rock has remained as firm as its name denotes, and today its position was never more prominent nor more secure. Moreover, the Barred Rock Fancy has not yet found it necessary to go to extremes, and consequently the breed has retained its vigor, coupled with a rare delicacy and beauty.

The whole tendency of modern Rock breeding is for height on leg, and this year, I hope, a climax has been reached. As they now stand, the pullets are neat, perfectly symmetrical, and perfectly proportioned; but one can obviously have too much of a good thing, and a little more height on leg means shapelessness, and the symmetry is impaired. Apart from this, breeders are going well in the right direction. Especially am I glad to note an advance towards delicacy and refinement, as against mere size. Years ago, when the Rock Fancy was stronger in the South, breadth, size and bone were the one goal, which, if attained, meant a "place" at any big show. Today they are matters for retainment rather than attainment, and it is far more important to keep type primarily in view rather than run the risk of producing something coarse and unattractive.

Now, a word with regard to the practical characteristics—chiefly to the disillusionment of those who would have it that Rocks are frequent sitters. Briefly and generally, they are incorrect. In my experience (it is fairly extensive) I have never had pullets or hens whose sitting propensities would be the least exaggerated over those of other breeds, such, for instance, as Orpingtons or Wyandottes. My own birds go broody, on an average, about twice a year, some but once. A Rock hen, I grant, is suggestive of a rather heavy sitter; but in a matter of this kind it is a great mistake to be guided solely by appearances. Rocks are commonly said to lay "rich brown" eggs. As a matter of fact, their eggs are usually pink or tinted, and are seldom particularly "rich." Rock hens are always reliable, however, both as sitters and layers, and to the backyarder and the farmer they can alike be thoroughly recommended.

PULLET BRED MALE
Owned by George M. Benham, Canandaigua, N. Y.

SHOWING THE IDEAL BARRING
Owned by George M. Benham, Canandaigua, N. Y.

As to the Buffs, there is not much to be said. So far, they can only be described as raw and conspicuously lacking in finish. Moreover, they are unmistakably coarse, and in the cocks an objectionable red tinge is generally apparent. Bone and size they do not lack; but in the finer points, such as color and shape, they are backward. The pullets are, if anything, probably more forward than the cocks, and of the former some very sound, even-colored specimens were shown this year. As an exhibition fowl, I am doubtful if the Buff Plymouth Rock will ever rise above its present mediocre position; but its reputation among utilitarians will probably claim for it attention for some years to come. That it is a layer of more than ordinary calibre there can be no doubt, and it is with pleasure that I see so many pens competing in the competitions now running, and one especially figuring prominently.

PULLET FROM 1st BUFFALO PEN
Winner of Color "Special"
Owned by George M. Benham, Canandaigua, N. Y.

And of whites the same good may be said. On all hands I hear first rate accounts of their laying qualities. They are hardy indisputably, and to fanciers of a white fowl and a splendid layer, they cannot but commend themselves. As yet they can hardly be described as widely popular. In the South the White Orpington cuts them out; in the North all available irons are in the fire, and at present, apparently, Black Wyandottes are all-pervading—omniponent. Nevertheless, their progress towards popularity is satisfactory; but, in respect of size and certain other points, I own I am disappointed. At the Crystal Palace last year there were some fairly strong classes, containing nearly forty birds; but of them very few indeed could be commended for leg color. In some cases the legs were positively white, in others badly spotted, like a Houdan, and only the winning pullet, so far as I remember, possessed really rich, yellow shanks. This, likewise, lack of size, are points that can be comparatively quickly remedied by breeding from sound-legged cockerels and large hens, and, it must be remembered, they are essential characteristics of the breed. Black Rocks, on the contrary, are astonishingly forward in points where they might be expected to be most backward —to wit, leg-color and type. The winning cockerel at the Palace was a gem in both these respects, and, though rather backward, he was a beautiful top color, and, to all appearances, sound. In fact, as far as can be seen, Black Rocks are at present distinctly in advance of Black Wyandottes, and, to my mind, far handsomer. However, that is a matter of opinion; and it certainly seems probable that in the North Black Rocks are finding favor with Rock breeders. For the rest, they are good layers, fair table birds, close sitters, and extremely hardy; and in time to come I shall not be surprised if they displace the ubiquitous Black Wyandotte of the present day.—*Feathered Life*, England.

Treatment for Cholera.

One of the best remedies for the so-called chicken cholera is tincture of iron and milk. Use about one-eighth ounce of tincture of iron to every gallon and a half of sweet milk. Place this where the birds may partake of it as they desire, and it will surprise you how soon they will begin to show signs of recovery. If the case is a very serious one, remote from the rest, give them about six drops of the tincture of iron in a tablesponful of water three times a day. Do not allow them to have any water besides what is given with the tincture of iron. A little sweet milk may be given the bird if it desires additional drink. Five drops of tincture of iron to each gallon of water will prevent an outbreak of cholera in the flock.

* * *

Treatment for Roup.

Professor A. R. Ward of the California station reports that in the treatment of roup potassium permanganate, creolin, kerosene, camphor and turpentine were employed. The potash permanganate was found useful in treating roup in the eyes of fowls, but it was useless in treating the membrane of the nasal chambers, the seat of the disease. The result with creolin were similar.

Copper sulphate in a 2-per-cent solution and turpentine were of little avail. Kerosene gave at first what seemed like encouraging results, but the fowls, which seemed to be cured, died subsequently.

The Canadian station bulletin says: Roup symptoms are puffed or swollen eyelids, watery discharges from the eyes and nose, eyes swollen and closed, and a thick discharge from the eyes and nose. In the early stages of the disease bathe the eyes and face of the fowl with a mixture of equal parts of sweet oil and whiskey. The fowl should be removed from the flock and fed on soft food.

If the disease has reached the stage when the discharge has an offensive smell, the fowl should be killed and burned. Then disinfect the house with sulphur fumes or a 3-per-cent solution of creolin. In the case of a valuable bird loosen the discharge in the nostrils and eyes, and then immerse the birds head for 20 to 30 seconds in a 1 to 2 per cent solution of permanganate of potash. Give this treatment twice daily.

One poultryman says: Vaseline is a goods outward application for roup. Clear the bowels with a teaspoonful of castor oil given internally. Pepper the food. A teaspoonful of carbolic acid to a pail of drinking water also helps.

* * *

Early hatched pullets should be retained in preference to those hatched late. Market all fowls possessing decided faults, remembering that defects increase with age. Dispose of all very quarrelsome cocks and feather or egg-eating fowls, as they soon will have imitators. It matters not how abundantly the food may be supplied, no flock of hens will lay regularly in winter until they are provided with warm and comfortable quarters. Every precaution should be taken to construct houses as warm as you can make them, and also to locate them in a sheltered spot, where a bank of earth, hill, or bunch of trees will act as a wind-break.

* * *

No flock of hens can lay if the poultry house is cold, as it requires too much food to create warmth for their bodies. They will be unable to produce eggs simply because the cold takes from them the elements that should be devoted to egg production. Warm shelter, therefore, saves food, and it is much cheaper to make the poultry house warm than to purchase warmth in the shape of grain. Neither can hens produce eggs unless their food contains the elements of which the egg is composed. As an egg is more

than nine-tenths water, the importance of supplying the hens with all the water they require cannot be too strongly urged.

* * *

Water not only enters into the composition of an egg as the leading substance, but it fulfils other purposes. It is essential to the bird as a solvent to the food, when hard grains are fed, to the gizzard that grinds the grain to powder, but the water is thus necessary to assist the digestion, and to convert the food into blood. It is generally supposed that birds are not partial to clean water, and will drink from filthy pools, but the fact is, the hen is rather fastidious, and will always prefer pure water and clean food when she can get them.

* * *

Clover hay, cut in half-inch lengths, mixed with equal parts of good bran, wet with boiling water, covered to keep the steam in, and left standing over night, make the very best egg-producing food. Bran contains a much larger proportion of lime than any other cheap food that is derived from grain, and as the shells of eggs are composed of lime, it is essential that food rich in lime be provided. It may be urged that the use of oyster shells will provide lime, but it will be found that it is the lime in the food that is most serviceable, because it is in a form that can be better digested and assimilated than carbonate of lime.

* * *

Poultry raising will yield a greater profit on the amount invested than any other farm industry.

Charcoal given freely to fowls will often correct minor ailments, including indigestion. Although not used by all breeders, it is considered a great health producer by those who have given it a fair trial.

* * *

Even the hen enjoys change of feed now and then.

* * *

A good excuse for the lazy man that is not in the mood to do any repair around the farm is that he has not any ready money, but it might be well for him to see how much improvement he can make without spending any money. Often a valuable improvement can be made without any expenditure.

* * *

All hen houses should be thoroughly ventilated, but broken window spaces and cracks in the house is not the right kind of ventilation.

* * *

At this time of the year, eggs for incubation can be kept in a cool room and placed small end down in bran. They can be kept for about three weeks, although it is better to use them sooner, as the chicks will be stronger. In the Springtime it is not advisable to keep eggs more than ten or fifteen days.

* * *

Feeding.

I am feeding a warm mash in the morning and screenings at night. I boil all the potato pealings and scraps from the table until very soft; then put in enough bran to thicken, and stir it. This has proved very successful. J. V. Z.

* * *

Numerous poultry writers advocate the free and abundant use of salt, but we do not believe in this. Poultry should have some salt, but not to much.

Avoid a Common Death Trap.

Do not let the severity of the winter find you unprepared. By severity, I do not mean really frost alone. I mean weather, that will act in a seriously prejudicial way to your fowls.

The wet, raw, and blustering is really a more severe time for Poultry than any other, and results in greater expenditure in medicines—more frequent deaths. A few simple rules if carefully followed by the novice will supply the requisite antidote to disease and trouble generally.

Go over all the runs now. Dig them up thoroughly, or lime them well with quicklime. First, of course, remove the birds or the lime will give bowel trouble. The run is really a very essential thing. We may not ourselves realize what a dirty run may mean to a bird which has to draw its air supply from so near a position to the reeking evil smelling ground. Microbes will be on the face of every run in myriads. In a dirty run, the fowl is practically condemned to pass its whole time in the reeking mass. Therefore, see first of all that the soil is disinfected as much as may be possible. Look well to grit if the birds are confined.

The houses should be well examined especially if they be old wooden ones. These are often pure death traps for fowls in bad and stormy weather. It were better that the fowl was sleeping high up in the wind and storm on the end of some old rotten branch (if it has been brought up to stand it), than that it should be kept confined all night with perhaps too many others in a structure through which piercing draughts find their way from any of the four quarters of the heavens. A draught chills the part it operates upon, and causes therein a stagnation of the blood, which results, if it is neglected, in inflammation and disease generally. It brings the bird into a low condition, and so renders it liable to various diseases which may happen to be flying about.

Give your birds, then, a freshly cleansed run, a good snug dry, warm house, and plenty of good food, and all will go well. Plenty does not imply a surfeit. You must not get laying hens fat, nor yet on a blustering cold day pinch them of the best food. As the poor old preacher said to his sleepy congregation on the Sunday afternoon—"Enthusiasm is a very fine virtue, a very fine one indeed, but it must be tempered with prudence and judgment, or it will lead us—lead us—into—Here, Thomas, take it to the window and see what it will lead us into." Well, well in the matter of laying Thomas will return and reply, "An empty egg basket, sir."—Pigeons and Poultry.

* * *

The Jamaica Agricultural Society recommends ripe bananas as a good morning's food for fowls. It does not regard boiled green banans as conducive to egg production. Bran, with boiled, ripe banans and with sweet corn is a good morning ration.

* * *

A feed of chopped onions should be given the fowls once a week.

* * *

Eggs should never be allowed to go below a temperature of 45° fahrenheit if they are kept for hatching. The germ will become chilled and perhaps killed. About 50 or 55 degrees is the right temperature for eggs that are to be incubated.

* * *

A bird having an attack of vertigo can generally be revived by pouring cold water on its head.

* * *

Many successful breeders do not use charcoal while others keep it always where the chicks can get it.

The Cochin

By D. C. Peoples.

IT is said the Cochin is a "Fancier's fowl." The same can be said of any other breed.

For several years previous to my taking up the Cochin family, which was in 1901, I bred the Barred Plymouth Rocks, one of the most popular breeds in the American class, but I did not attain any better or even as good results from them as I have had from the so-called "Fancy Cochin."

I do know one thing—I can depend on a good egg yield during the winter months from our Cochins, but the same cannot be said of all the other varieties, no matter what their reputation may be. A great deal, however, depends on conditions.

A few days ago a friend called on me and during our conversation he remarked that his chickens were not doing any good, as they scarcely had enough eggs to do their family baking, and he kept a fine flock of Brown Leghorns, too; so you see it is not the breed, but the feed and care you give them.

This thing of walking out with some corn and a little water won't work. The hen, as well as the human being, must have a variety of good, wholesome food.

While a great many of the other varieties are very popular, none will give any better results, sale of stock and eggs considered, than the Cochin. They are better equipped to stand the low temperature, consequently could not help but be good winter egg producers.

They are sometimes termed the aristocrat of the feathered tribe. Their gentle, dignified manner make many admirers and when once taken up as a specialty and given the same chances as the Rock, Wyandotte or Orpington, to show their worth, are not found wanting.

The Partridge and Buff varieties I believe are the most favored of the Cochin family. The Whites follow next in favor. They, too, are fine layers. I once owned a pullet that laid almost every day from February 1 to July 15. She was a wonder. In the show room she was there "with the goods," winning five 1sts in two seasons.

The Blacks are of a wilder nature, good layers and a very interesting fowl in many respects. They are very rare and will pay the fancier well who will take them up as there is a market for all and more than is raised.

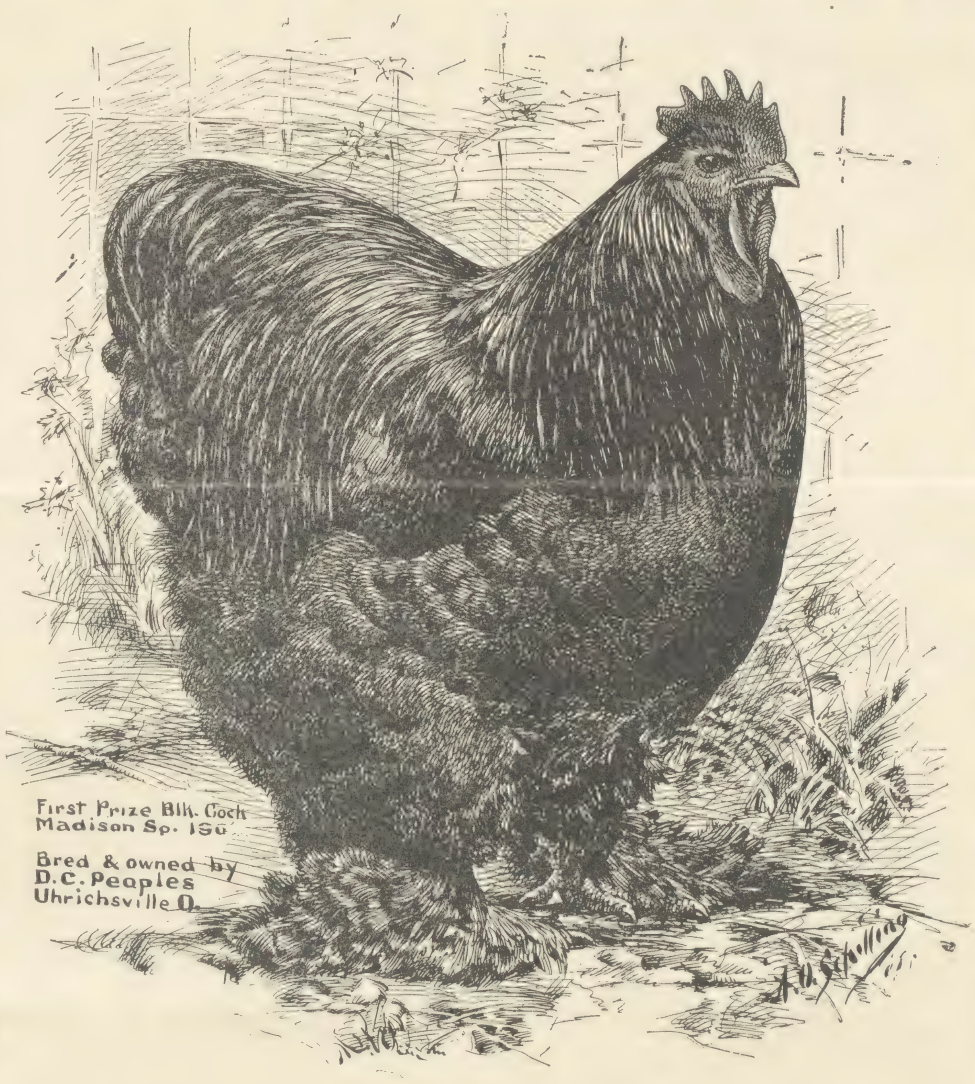
For the city or village fancier the Cochin is the fowl, as a three-foot fence will keep them in without any trouble. They are gentle and quite contented in close quarters. This one item alone is a very important factor, for it is undoubtedly pleasing to know that when once within this enclosure they will be there on your return to feed and water. Is this not a great satisfaction?

The Partridge Cochin is my favorite of all. The rich, red plumage of the male and the mahogany colored female, with their delicate striping and penciling, is certainly grand. Pen cannot do justice to these beautiful fowls. You may be able to describe the Buff, White or Blacks, but when you attempt to give a full and complete description of the Partridge Cochin, you fail.

Buff Leghorn Cock, 1st Madison Square, 1st Rochester, 1st Herald Square, etc. Never defeated. Owned by F. S. Zwick. Seymour, Conn., originator of the Rose Comb Buff Leghorn.

The low-down, deep, massive appearance of the modern Cochin, as compared with the long-bodied and long-legged specimens of a few years ago, certainly shows marked progress in the building up of this noble family.

It requires some skill and tact to handle them successfully I will admit, but it certainly does require the same skill to handle any other variety.



The successful exhibitor of today must know his business thoroughly or the "other fellow" will carry off the blue. No matter how good your birds may be, if not properly groomed and fitted your chances for winning are few. Of course it all depends on where you are going to show. If you send your birds to our largest shows you must be "next" if you have any chance at all, as the old timer will no doubt be there and we all know what that means.

Broken feathers are a very serious proposition and will count heavily against you, so don't overlook this seemingly small matter. To Cochin breeders broken feathers are a very serious matter.

Coop your birds some five to seven weeks before you intend to show them in good, large exercising coops (should be at least seven to eight feet in length by two feet wide for a pen of five birds), and each day keep a close watch on broken feathers and remove them at once that new ones may grow in their place. To grow new feathers requires at least six weeks, so do not put off this part of your work.

There are so many things to do in way of grooming, but space will not permit of detail. This one thing, however, is a very important matter and must not be overlooked.

Give your youngsters plenty of food, including fresh-ground bone each day; green stuff, all they can eat, and plenty of fresh water or milk, and you will have some fine youngsters for the winter shows.

Schenectady's Big Show

The Electric City Poultry and Pet Stock Association (Inc.) held their largest and best show January 29 to February 1, and the members (who must be classed as hustlers) feel very highly elated over their successful work in bringing together the finest display of poultry, pigeons and pets ever shown in this Mohawk Valley.

The classes were mostly filled, R. I. Reds being a show in themselves. Over 250 Reds faced the judge.

Rocks, all varieties, were there in good numbers, and many extra good birds were among the lot. In Barred we noticed some nice ones. We also noticed many weak colored shanked youngsters. It's bad enough to have to show old birds with pale legs, but there is poor excuse for putting the chicks in a show that have nearer white than yellow shanks, as it is not hard to get yellow legged Barred Rocks if we mate right and have the blood. Buff Rocks were good as a class (here we missed the fine display of N. V. Whitbeck—("Nick, where art thou?") It is to be regretted that so many Buff Rocks are shown (especially males) that have very poor heads and shape. As an illustration: The winning cockerel here was a finely colored bird, even in all sections, but oh, his comb and shape—well, he was a Buff Leghorn cockerel in about all points but ear lobes. If they had been white I imagine him a winner in another class. The second bird was an ideal Rock in shape and had a Rock head, while his color was very little behind the winner. Whoever judged these surely had something stronger than "golden buff colored" eye-water around his clothing. The other varieties of Rocks were nice, and contained many extra good birds.

Wyandottes were a show all by themselves, the Whites predominating, of course. There was something like 200 birds in the class. Many winners at our fall and winter shows had to go way back here, so all the good ones couldn't get a ribbon.

Brahmas, Cochins, Leghorns, and in fact about all the other breeds, were many, and very few poor specimens were in the coops. We noticed some extra nice Partridge Cochins. The females had that beautiful mahogany color, with distinct penciling we so love to see. As good Light and Dark Brahmas were here as we run across anywhere.

In Buff Leghorns there were some top-notchers. Here again the judge went astray. The winning cockerel was not even colored (had red shoulders) while he carried a pinched tail (a bad one too). He had legs lengthy enough to grace a Pyle ex-Game male. The 2d cockerel was an easy winner here. This called for a protest (have not heard how it was decided).

In Black Leghorns again there was a rank decision. The 1st cockerel had three plainly seen black tipped white

White Orpingtons, shown successfully at Hagerstown, Md., and Jamestown Exposition. Owned by Harry J. Miller, Chambersburg, Pa.

feathers in hackle. These feathers were not partly gray ones, but *white* from end of quill to within about half an inch of end—easily one and one-half inches of white. The 2d bird should have been the winner, while the 1st was easily a disqualified one. Here also the judge's decision was protested. It would be hard to get much better Black Leghorns together in a show, taking them as a lot.

Bantams were a big display; Sebrights predominated. Pigeons were many, and some good ones were shown. Waterfowl were not many, though some nice ones "sissed" or "quacked" at you from their coops. In Rabbit alley was a nice display. Many beauties were shown.

As this association is an incorporated institution you get your money whenever it's coming. As there was hundreds in the treasury before this year's show opened to the public, we are of the opinion that it will take at least four figures to tell what's there now. May the Schenectady show always bring together such a nice lot of entries as they had this year is the wish of

W. C. Moat,

Amsterdam, N. Y.

Complete list of awards in March 1 issue.

Wenatchee, Washington, Show

Located on the Columbia River, near the head of navigation, is the beautiful little city of Wenatchee. Here is the home of the "Big Red Apple," and one day will be known as a big chicken center of Eastern Washington. Wenatchee, is the largest town between Seattle and Spokane, on the Great Northern railroad and will one day be a big inland town. The country around Wenatchee is well adapted to the raising of poultry and for fruits and grains, it can't be beat on the Pacific Coast. The Wenatchee poultry show, consisted of about 400 birds, most all of the popular varieties being represented. In quality, the birds at Wenatchee, will compare favorably with any of the best shows on the Coast and in White Leghorns, White Rocks, Barred Rocks and Black Minorcas, the breeders here will hold their own with the best any where.

The officers of the Wenatchee Poultry Show, were: C. E. Buttles, president; H. Heidenhain, vice president; John N. Johnson, secretary-treasurer; A. A. Bousquet, superintendent, and H. H. Collier, judge.

To Light Brahma Breeders

The American Light Brahma Club recently elected officers for the ensuing year and are taking up the good work of giving the Light Brahmas more prominence and are placing their good qualities before all Brahma admirers.

New names have recently been added to the club's membership and a neat little booklet is being mailed to those interested in this grand breed. You are invited to join our club and help promote the good work.

Yourt truly,

East View Poultry Yards,

3d Vice-Prest. American Light Brahma Club.

Published by

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

THE illustration on cover page shows the Lake of the House Rock Farm at Weymouth, Mass., owned by C. M. Bryant, President of the American Poultry Association.

The geese on the pond are called "Beach birds." They are tied or fetted by the leg so that when the wild birds light on the water their attention will be called to the domesticated geese or ducks. The process is simply that of tieing the other birds to entice wild birds when they light on the pond to come near enough to the shore to be shot. When they alight, they notice these domesticated birds on the beach, and then similar birds which have been trained for that purpose, are either flown from traps situated on high ground back of the stand of breast-works or are thrown over from the breast-works, and these domesticated birds fly more or less a distance over the water and then swim in toward the shore where these birds, which the picture shows, are, and this brings the wild ones in and then they are shot at either in the water or in the air.

This photograph was taken by Mr. Purvis and copyrighted by the Poultry Publishing Co. Everybody knows that both geese and ducks migrate to the North to breed and to the South to winter and feed. It is a fact that the flight of these fowls varies somewhat, some going South by way of the Great Lakes and others following the coast along to the South. Weymouth, where this lake is situated, is quite near the salt water.

The shooting box is located at the westerly end of the farm on a lake called Whitman's pond. Lakes in the locality are generally termed ponds, but this one has a large expansion of fresh water located between the Weymouth Fore-River and Weymouth Back-River, and the natural course the birds pursue in flying South is after they have followed the coast along, they will follow some river up when they are in need of fresh water to drink and light on a pond in close proximity to salt water, as this pond is situated.

On one end of the property is situated Mr. Bryant's hen farm and on the other end, where the picture was taken, is the shooting box, consisting of two houses conveniently arranged for sleeping quarters and for all the inner wants of mankind. Right back of where these geese are is situated the camp, hidden from view of the pond by a wooden fence which is boughed and greened over with pine, evergreen and oak boughs so as to make the landscape from the pond similar to the natural conditions outside of where these camps are situated.

Judge C. A. Ballou complains to *The American Stock Keeper,* and not to us, about our report in the February 1st issue of THE AMERICAN FANCIER on his judging at Boston.

As his letter was printed in *The American Stock Keeper* we have sent them the following for publication:

Our show reports have been unbiased and published to give impartial information. We ask you to read this letter carefully and let us have your opinion.

Editor *The American Stock Keeper:*

In the February 15th issue of *The American Stock Keeper* you published a letter from Mr. C. A. Ballou in which he takes exception to our report on his judging at Boston that appeared in the February 1st issue of THE AMERICAN FANCIER.

We cannot understand why Mr. Ballou sent his letter to you for publication instead of to us, because it was our paper and not yours that criticized his judging.

It seems strange that you published this letter instead of returning it to Mr. Ballou telling him to send it to us. Surely you knew that the place for its publication was in the columns of THE AMERICAN FANCIER. We consider this letter to you a complaint instead of a reply, for surely, to make the return of words to a criticism a reply, they must be sent to the publishers of the criticism.

A similar case occurred shortly after the Madison Square Garden Exhibition when an exception was taken to an article you printed. This we were asked to publish, but we refused, believing that your columns was the proper place for it.

As you have published Mr. Ballou's letter, it is only fair that you publish this one.

Our report in the February 1st issue of THE AMERICAN FANCIER on the S. C. Brown Leghorn Pullets was as follows. "In our opinion the pullets were misjudged. The 1st was poor in shape and hackle, and in our opinion, should not have received a ribbon. The 2d pullet did not meet with our fancy, but was better than the first. Three unplaced birds, we believe, were far superior to 1st and 2d. No. 1292 looked to us to be the best pullet, but almost equalled by No. 1294, and even then, by some thought to be better than No. 1292. No. 1288 was in close competition with No. 1292 and 1294. The 5th pullet looked to us like a hen, but we could find no pullet in any hen coop to show a mistake in cooping."

Two weeks later the February 15th issue of *Farm Poultry,* after referring to the cocks, hens, cockerels, reports as follows: "The pullets were not as satisfactorily judged. The first on the whole was one of the poorest in the class. She was very deficient in shape, lacked ordinary size, and had no style at all. In color, her failings were almost apparent as in shape. Wings were off, hackle way off, and her tail showed very prominent edging. It is only justice to Miss Pitchlynn to say that owing to illness she was not able to judge this class, and only justice to the one who filled the role of emergency judge to say that we do not think he saw all the pullets, as some of the best were in another aisle a little remote from the rest of the S. C. Brown Leghorns."

In the January 25th issue of your publication you fully report and describe the cocks, cockerels and hens, but not the pullets. Of these you simply say "There was a grand class of pullets and many nice birds failed to land a ribbon." Why did you not review the pullets like you did the others? Was there a reason? There was considerable talk in Boston about these awards and we cannot understand why your report did not justly criticize.

Mr. Glasgow reported the bantams in our February 1st issue. He describes the different birds and wrote the following:

"The display of bantams at Boston, while containing many high class individual specimens, was a very ordinary lot taken as a whole, and in game bantams especially with one or two exceptions, quality was sadly lacking. Questionable, disqualified birds were awarded first prize at this one of the premium shows of the country, which all fanciers must admit is detrimental to the welfare of the bantam fancy. It is up to the Specialty Club to join hands with the Boston Association and try to make this show equal in number of entries and also in quality to the best in the country."

Mr. Glasgow will answer the letter you published from Mr. Ballou complaining on his Boston report.

It has been quite amusing to read some of the reports on the different classes in various publications wherein the writer intended to agree with all the awards and used this stereotyped and worn-out expression, "the best birds won."

A report praising all the birds is agreeable reading, but not enlightening. Sincere criticism has been our method in the past and will be our policy for the future. Critics are often better advisers than flatterers.

Respectfully yours,
Editor THE AMERICAN FANCIER.

* * *

The season of the year most interesting to poultrymen has approached. The fancier and the farmer will begin to get their breeding pens mated and the more adventurous among them will be hatching their first round. Incubators will be started and renew interest will be displayed.

The most important season is the breeding time and all should use judgment in the selection of stock. If a desirable head for your pen cannot be found in your yards don't hesitate to purchase the right bird from a reliable breeder. Too many believe their stock cannot be improved, especially by introducing new blood, and thus we find many not making the desired improvement. Of course one must use common sense in purchasing. There are many whose advertisements are most alluring, but whether or not they have the stock is the question. Among the pages of this publication can be found a most honorable and trustworthy class of advertisers, in whose yards stock of merit can be found. The modest advertiser is the one generally who has bred the ones which have held premium honors at the big shows, and in many cases been purchased by the more noted class of exhibitors.

Many eggs will be sold, and quite a number of people also, but when dealing with reliable people the chances are much less for humbug.

The purchasing and selling of eggs is in all a very unsatisfactory business. Some will be disappointed if they do not receive a 90 per cent. hatch; quality is ignored, and others vice versa.

Remember some settings are cheap at $5.00, while others are dear at $1.00.

* * *

Poultry men who have stock for sale and are not advertising on account of the financial trouble which has spread over certain sections of the country, are making a great mistake.

We have just spent a little over $2,000 on an extended subscription campaign. This should show the pessimists that we believe in the future of the country, that of the poultry men and of our own.

The wave of prosperity will soon be here and those who have advertised will receive their share.

* * *

To reach the greatest success in the poultry business, or in any other business, one must exert his entire efforts in one direction and not scatter them in different ways, for many a man has failed on account of attempting to cover too much ground.

* * *

The publishers of the AMERICAN FANCIER will appreciate suggestions from the public and invites from its readers everywhere such suggestions or criticisms as may tend to improve each issue. We want our readers to take part in helping us make each issue better than the preceding one. Let us know what you are doing in the poultry world as your experience will probably be interesting to thousands of others.

* * *

The Best Way to Start

AT the present time, when very many men and women are taking up the raising of pure-bred poultry for profit, for the first time, one question will be often asked—how can I best get a start.

The question of the best way to get started in the breeding of pure-bred fowls is one capable of several answers, since different peopl may have different ideas on the subject. Undoubtedly, in considering the question, all the circumstances of the inquiring party ought to be taken into consideration. What would be advisable for one, might be highly impracticable for another. Let us briefly enumerate the several different courses open to the beginner.

We will assume that Mr. Beginner has settled upon the location for his venture and has also chosen the breed and variety that he will keep. In looking about for his foundation stock, it is possible that he will find some established breeder who, for some reason, wishes to dispose of his entire stock. The stock is, of course, of high quality, and the price will probably be high. But what an opportunity, provided Mr. Beginner has the money. Perhaps the very best asset arising from such a purchase would be the good will of the established business. Such an opportunity as the above, is one to be immediately jumped at by any person with the necessary capital at hand. And, of course, such a person, even if no chance presents itself to take over the entire stock and good will, etc., of an established business, can take his good money and go to the large breeder and purchase a whole flock of birds to his liking, and the following Spring, will be able to hatch out from his own stock, all the young birds he will require. This is a grand, good way to get started. But it requires capital.

It is probably true that the very great majority of poultry beginners are limited in capital, and must invest where they can make every dollar count, and get the most for their money. To such, there are several methods open; they can buy a trio or a pen of stock, several settings of eggs, or chicks just hatched.

The latter method is a practically new one, but one that is being rapidly developed and is giving good results. The method carries several elements of risk, however, which seem to make it advisable not to put entire dependence in it, but if it is to be tried at all, to be tried in connection with the purchase of grown stock or eggs for hatching.

The purchase of stock, say a pen or a trio, will give Mr. Beginner a good start, provided he does not make the mistake of buying poor birds, because he can get them cheap. If he will buy a choice pen of breeding birds up to standard requirements, even though he finds they will probably cost him a five dollar bill apiece, he will be surprised at how his flock will grow in size and quality before the end of his first year.

The old stand-by method is to buy eggs for hatching, and if Mr. Beginner will exercise judgment in selection, he can get far better value in this way for his money than in any other way. The man who buys a setting of eggs at, say four dollars a setting, of a breeder with an established reputation for having reliable stock, if he has any kind of luck at all in hatch, and raises no more than a pair of birds from the setting, has made a good investment.

Perhaps the best way for the average beginner, all things considered, to make a start, is to buy a pen or a trio of moderately good stock and raise all the chickens he can. At the same time, to buy two or three settings of eggs from stock which he knows to be choice in all respects, and depend upon these choicer eggs to give him enough chickens for his best mating of the next season, and several choice cockerels. From his own more moderately good stock he will raise a goodly number of medium quality chicks. The cockerels can go to market and the pullets can be mated to cockerels from his choice eggs and his own strain graded up. So on the whole, it seems that a combination of buying stock and eggs for hatching, along the above-outlined plan, promises the most to the beginner of small or modest means.

BUFF WYANDOTTES

My birds at Boston, Jan. 1908, in the hottest class of Buffs ever shown, won the following:

12 Entries. 1st Cock, 4 and 6 Hens, 6th Pullets.

All these PRIZE WINNERS are in my breeding pens.

¶ Egg orders booked now from my best pen headed by first Buff Wyandotte Cock, Boston, $5.00 per 15. Other choice pens $2.00 to $3.00 per 15.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

resident, American Houdan Club, From 1900 to 1907.

Address **POULTRY WORLD**
154 Fleet Street, London, E. C., England

February 10, 1908.

Mr. Leonard W. Lott—

Dear Sir: Keep up the good work. You have resurrected a magnificent memorial to the old "Fancier" and as a subscriber from the first issue, when started at Johnston many years ago, I say, keep to the straight and narrow path you have chosen and you are bound to win out. With best wishes for an exceedingly prosperous season, I am

Very truly yours,
J. B. N. FITCH.

The Philadelphia Exhibition

The Second Anuual Exhibition held at Philadelphia was January 21 to 25th, 1908. Mr. Leslie Jefferies acquitted himself well in the role of Secretary. The exhibition was carried out in a faultless manner. Mr. W. Theo. Wittman assisted. The entry in general was far superior to any held in Philadelphia in late years. The quality throughout was up to the standard set by the larger shows in the country.

The Millerton Poultry and Pet Stock Association

The Millerton Poultry and Pet Stock Association held their first show at Benedict Hall, Millerton, N. Y., January 14-17, 1908. The *Telegram* of that town claims, and is proud of the honor of being the egg from which this Association was hatched. I am quite certain if this egg had not been properly incubated by Mr. Searles, the Secretary; successfully brooded by Mr. Harris, the Superintendent, and, of course, not forgetting that moisture was added at proper times by the principal officers, the Millerton Poultry and Pet Stock Association would not have run off so successful a show as they did. This in the face of the Boston Show, also at Hudson, two shows not very distant, which no doubt took many entries from Millerton.

The writer also feels proud of having been called without soliciting, to judge at the Millerton Show, in his native County of Dutchess. There was about 1,000 birds exhibited by nearly one hundred exhibitors. The classes were nearly all represented. The Barred Rocks in quantity and quality, being the best, and a credit to the breed. The Wyandottes, good; Rhode Island Reds, very fair; Minorcas and some of the others might have been better, and is hoped another season will bring out more and better birds.

Sincerely,
ROWLAND STORY.

"Rochellaise"

457 acres devoted to "Faultless" Houdans and imported Island bred "Rochellaise" Jerseys. The world's best in their respective breeds. We challenged all the noted Houdan breeders to meet our fowl at New York and Boston shows this winter. Some of them did not dare to come but we won every first and every second prize against all competitors at those two shows. 400 Houdan hens for sale that will be 2 yrs. old in the Spring. Every hen a pedigreed hen bred from trap-nest records since 1890. Every hen is sold under guarantee to weigh 7 lbs. or over and to be a "Faultless" Houdan, and to produce 5 eggs each week the balance of the Winter.

12 beautiful registered Jersey calves for sale, bred from the best cows the Island could produce.

We breed our Houdans as we breed our Jerseys—from actual test, and to-day, as great layers, they stand first.

$20 Return from 25c

One large packet of each of the following named seeds will plant space 30x50 feet and with proper cultivation will produce $20 worth of vegetables. We mail these 16 large packets for 25 cents: Beet, Bean Cabbage, Carrot, Celery, Chard, Cucumber, Onion, Parsnip, Parsley, Peas, Pepper, Radish, Tomato, Turnip, Sweet Corn; all of choicest varieties and grown from selected stock.
Or for **ONE DIME** we will mail Beet, Cabbage, Cucumber, Lettuce, Onion, Parsnip, Parsley, Radish, Tomato, Turnip; seeds enough to plant space 20x30 feet.
Prepare for spring by sending today for one of the above assortments and our 1908 Catalog and Garden Guide offering $45.00 in prizes.
BINGHAMTON SEED CO., 301 Court St., Binghamton, N. Y.

THE 1908 official pigeon band is on the market, and from the few we have seen, they are a great disappointment. The workmanship, especially the enameling, is indeed poor.

Heretofore we considered the American quite the equal to the English, but if the few of the 1908 we saw are a sample there will be no comparison.

We had quite an order ready to send to England and the last few days we received many inquiries regarding the length of time necessary to import.

It appears those inquiring have received their first American bands and are not satisfied.

* * *

The squab industry has not attracted so many this spring, although during such financial times and the many alluring statements made by those that can start you in the business, one would think the sales of breeding stock would be far larger than last year. We believe the pigeon fancy has benefited by the advertising given them by these concerns but only to the extent of making those which went into it a real fancier and admirer of the pigeon. These squab breeders are for sale and the are purchasing fancy stock in their stead.

There is no doubt money can be made in the industry, but only on a large scale. The care and attention necessary in keeping a hundred or so squab-breeders doesn't repay one. After deducting the feed and investment the profit per pair will be small; but of course, should a few thousand be kept, it is a different proposition.

The demand is quite as large as ever, and owing to the scarcity of game in this country it will continue.

* * *

At this time of the year considerable trouble is caused in pairing up the 1907 youngsters. Sex is really the stumbling block; many a time we have paired two young hens and how well they got along together, but the percentage of youngsters didn't warrant their union lasting. If one is not sure of the sex better keep the bird alone for a week or so than place in the mating pen.

Mr. Carl Wentzein, for a number of years in the squab business at Lakewood, N. J., has removed to North Wales, Pa., to take charge of the American Squab Co.'s plant. Mr. Wentzein is a practical man and will no doubt make a success.

There are 17,000 birds on this plant, which should yield an enormous amount of squabs.

Mr. Wentzien stated that the first thing he would do was to find the workers in the loft; in such a collection he said one would find many drones and they were the ones that were eating the profits. Mated pairs were the only ones that would be kept. Feeding was another important factor with Mr. Wentzein.

After our conversation we were more convinced that to make a success of the squab industry one must know the practical things of pigeondom.

* * *

What has become of the Pigmy Club? During the year Mr. E. C. Duffy has kept the columns of the press well posted regarding club doings while acting in the capacity of secretary. All specialty clubs are not so fortunate. We believe the office of secretary is at the present time unfilled, consequently news from that source cannot be gleaned.

* * *

Dr. L. H. Jones, we understand, has been negotiating for another importation of Pigmies. When competition is strong the interest never dies. We should say by the appearance of those owned by the Doctor that graced the pens at New York and Boston he will certainly be well fortified next season.

* * *

Dr. Fred's C. Peterson, well known in the ranks of Fantail fanciers, has, during the past few weeks, added greatly to his already fine collection by purchasing both whites and blacks of high quality.

Unless we are very much mistaken the Nisequogue stud will be a big factor in Fantail alley next season.

* * *

Mr. H. V. Crawford informs us the next New York Show will be held December 29th to January 2d. Back to the old dates will probably please the fanciers. This season the great show came too early. We heard many complaining, although they all had to attend. When a fancier misses this exhibition he is deprived of half of the pleasure in keeping pigeons.

* * *

In mating up your birds be careful that the cock and hen do not have the same fault. Remember that all properties are not obtained in one season, but select the one most deficient and improve that. Having improved that point turn your energies to the other failings, but don't lose that which you have gained.

The skill of producing better birds each season can only be done by perseverance. In this point our English cousins are past masters. Each year many importations are made of the very best blood obtainable on the other side, but still the improvement is not so noticeable in the home crop of youngsters.

* * *

In speaking of the success of Mr. Russell, the Jacobin breeder of note, a writer in the *Feathered World* says: "By living up to the spirit of the present age and specializing on one breed and one color, by paying close attention to his stud, never overcrowding, never breeding from more than eight pairs, and keeping loft and fittings in spotless condition. These are in a great measure the secrets of his success."

The above should carry considerable weight, as the facts are clear and true, although the exact number of pairs one should breed would depend entirely upon the quality and proper accommodations. Mr. Russell produced the great black shown at Boston, which is probably the best Black Jacobin in this country today.

* * *

Helmets have established themselves as a standard variety; they have come to stay, says Mr. C. Kreuger. No show up to the present time has exhibited as many at one time and we predict larger exhibitions of these pretty birds at future shows when the club will select its judge from among the Helmet breeders to place awards according to its adapted standard. The judge who placed the awards at the Boston show did well on the whole, considering, as we were informed, that he had never read the Helmet standard. We should also have put the birds in the larger classes in a pen for comparison. Altogether the exhibit was very creditable, with several very good birds. Helmet breeders should avoid the long dark beaks and swallow-faced type. True Helmets are Tumbler-faced birds with crest beginning low in the neck, hugging the head and good rose at both sides.

The True Magpie

By W. B. McCreath

CARE must be taken to select birds of the very soundest black, devoid of all blueness or dunny color. Nothing is more beautiful than a really sound lustrous colored black Magpie, and when one takes the bird in hand the whole of the black portions of the plumage should glitter in the sun, showing that lovely beetle-green sheen which one sees to such perfection in a good black Hamburgh fowl. One frequently comes across black Magpies showing what is known as rustiness on the neck. This is not a good point, but I have frequently found a bird with this fault very useful as a stock Pigeon to cross in with a strain lacking lustre on the black. These rusty necked blacks are frequently the most lustrous birds in the loft.

Next to blacks, yellows are the most typical birds. There is some diversity of opinion as to what is the proper shade of yellow required in a show specimen. Some breeders prefer a pale colored yellow, and others a darker shade. However, what is really wanted is a bird of a rich golden color, which might be compared to the color of a new sovereign. The pale sickly color, also the hard, harsh yellow, are to be avoided. The whole of the yellow portions of the plumage in yellows should be of exactly the same shade, especially in the shape of the tail feathers, which are very apt to be washy or even white.

In reds the color stood still for a long time some years ago, and a really good red Magpie was hard to find. During the last few years, however, a considerable improvement has taken place, and some really excellent specimens have been shown. They are still a good way behind blacks for type, but once their size is reduced the present-day reds will not leave much to be desired. The color wanted is as near blood red as possible, and as in yellows, the color must be even throughout. Plummy or brick colored specimens are no use as show birds.

Blues have improved more than any other color during late years. Not so long ago they were big, coarse birds, woefully lacking in type. Now we have some really pretty, well-proportioned little birds, full of the correct Magpie properties. The color of the blue should be bright and clear, devoid of all sootiness or rustiness on the neck. Care must also be taken to avoid birds showing whiteness on the rump or in the shafts of the tail feathers. Some fanciers like a dark, deep colored blue, while others are more inclined to favor the lighter shade. Personally, I must say I prefer the latter, and my endeavor is to get the color as near sky-blue as possible.

No Magpies change so much in appearance as blues. And many specimens when they first come out of the nest lead the breeder to think he has at last bred the long hoped for, expected champion. Ere the bird is many months old the gilt is off the gingerbread, and it turns into a very ordinary specimen. I think young blues disappoint their owner more than all the other colors put together. However, my advice to the young fancier is not to destroy the youngsters until they have fully moulted, as often the ordinary squeaker turns into the best show specimen.

A blue Magpie has always a fascination for me. They are always clean and smart, and are really hardier than any of the other colors, and I believe if I had to decide which color I preferred after blacks I would say blues, although I know reds and yellows are more popular and will generally beat blues in a mixed class.

Silvers, alas! Where are the beautiful birds one used to see at the Palace show some eight or ten years ago? I am sorry to say this color has deteriorated very much. Some time ago they rivalled blacks for type and fineness, but to use the expression of one of the largest breeders of the Magpie, "The silvers of today are brutes." Still, I feel quite sure there are better days in front of the silver Magpie. More fanciers are beginning to go in for the color, and as competition increases the quality will likewise improve. I, therefore, hope that in a few years we shall see the silver Magpie back to its old position from which it has fallen so far.

In my opinion, the rage for color, and nothing else, did more harm to silvers than tongue can tell. No matter how typical and excellent a bird was, if it failed slightly in color it was left cardless! In the finest and most typical silvers nearly all showed a slight creamy tint on the hackle. Everyone knew this was not a desirable thing; but these birds teemed with quality all over. They were condemned, and gradually got killed out. The loss of these birds is the cause of the poor silvers now shown. The color of the present day silvers may be better, but very few of them possess any other good points. By all means let us have silvers of the correct shade of color, but if a really typical specimen, slightly creamy, turns up, give the bird a chance, and don't condemn him altogether.

Duns are not very numerous, but some really stylish birds are now being shown. A great many of them fail in skull properties, and this is a serious fault. The color wanted is the soft shade best seen in a good colored dun Carrier. Creams are the latest addition to the list of colors, and as yet are mostly pale colored yellows. Some very typical birds have been shown, but it is at present extremely difficult to say where the yellows stop and the creams begin, as far as shade of color goes. The name cream indicates what shade is wanted, and judges will just have to put up with being severely talked to, and make up their minds to only go for the lighter shade, leaving the pale colored yellows unnoticed. These latter may be very useful as stock Pigeons, but they are not show creams.

Let me here say that I was rather afraid to start this article, especially after having read so many excellent remarks on the Magpie in the Fancy Press from time to time. However, I trust that it may be of interest to some readers, and hope that fanciers will not think I wish to dictate to them in anything I have said. What I have set forth are only some ideas of my own, and if they are of help to any novice, or do anything to further the interests of the Magpie Pigeon, of which I am so proud, I shall feel that the time I have used in penning these lines has not been wasted.

In conclusion, let me say that Magpie men must be careful not to go to extremes, or rave too much over one particular point in their birds. Take warning from the silvers. Type, style, head, and everything else, were sacrificed for color, and we have now very poor all around specimens. In the race for style, long necks, reach, etc., according to different enthusiasts' ideas, do not let us forget head, color, and markings. Some men may state that color and markings are easily got, and even venture to say that a good skull is quite simple to obtain. Maybe they are, or maybe they are not.

Be that as it may, what we want to produce is a smart little bird, possessing all these points in reason. A bird that when it is looked at by a fancier, be he Magpie breeder or not, or even when looked at by the casual passer-by, may be proclaimed to be beautiful and an ornament, no matter where it is or what its surroundings may be.—*Pigeons*, England.

A Sensational Yellow Fantail
Owned by Havemeyer Bros., Mahwah, N. J.

Kingston, N. Y.

As predicted in these columns a year ago, the Kingston Show again proved a success, although held same week as Madison Square. The new management are to be congratulated for the vast improvement over a yead ago. President Smith and Secretary Rowe were on the job at all times, and Superintendent Miller knows how to have things run smoothly. While in many classes the entries were small, every bird showed quality, and where competition was had it was keen, and an award in either case was to be appreciated. Judge C. E. Rockenstyre placed the awards and did it well. With a large number of birds to be judged, he took his time, made use of his long experience, with the result that fault finding exhibitors were not to be heard. An experienced judge of good standing is one-half a show. While much could be said of many of the exhibits, it would require space too valuable. However, in passing, the Barred Rocks of Joseph C. Wolven were of the sort sought, many being worthy a try at the Garden. This was a large class, many a good bird going blank. R. D. Miller's S. C. Buff Orpingtons were a pleasing sight, even in color and of a "type" throughout such as older breeders would be proud of. Dr. Smith showed a mighty good one in his third White Rock cock. Paul W. Doll's S. C. Black Orpingtons were ideal, and proved an attraction to the show. Smith & Parker showed many extra good birds in their several varieties. H. D. Craig was there with a fine string of B. B. Red Game Bantams and won the Purina Cup with his first cockerel. The pigeon exhibit numbered some 400 birds of high quality with much rivalry. This section is to have a special judge next year. Rumor had it that next year would see at least two poultry judges, new cooping, a larger hall, and then —well, Kingston will be in line, with the best of the best. May it be so.

FRANK M. THOMAS.

Advantages of Proper Shipping Cases.

I feel it my duty to call the attention of *all* exhibitors to the great importance of shipping pigeons to the shows in a safe, sane manner, otherwise birds will be found dead in their boxes and baskets at the arrival of the show—in a few instances, and also at the return. If proper caution is used in the shipping of pigeons there is no need of any danger from losses sustained in shipment, but to begin with you must figure that every express messenger is a careless man, who does not understand the nature and value of pigeons, who will in his hurry to pack his car place them near steam pipes and as close and compact as possible, because he is considered a *good man* if he can so pack his car so as to get the greatest amount of profit out of it for his company. Knowing this it is up to the exhibitor to allow for it in the form of larger boxes, allowing each pigeon 12 inches square space to move about in freely and get away as far as possible from a hot pipe if he should be placed next to it. Of course this makes the express charges more, and a more cumbersome box is needed to ship in, and consequently the express charges are greater, but what is a dollar or two for express charges, compared with the loss of a valuable pigeon?

Besides, a bird sent to a show in a proper box is in much better condition to stand strong competition, than one that is in poor condition. Now, the importance of this matter has been very strongly brought to my mind because the whole pigeon fabric depends upon the shows. Without shows what is the use of show pigeons to the average man? If shows are not well supported by fanciers there would be no shows, and if there were no shows there would be no use for clubs—which the chief point in existence is to do with shows. The same applies to the pigeon press.

Now, I have never lost a single pigeon in fourteen years exhibiting, and I have shown at New York, Chicago, and even sent across the water. I have imported a great many birds, and sold a great many, but in all this time not a single bird has been lost in transit. That means something, and this is just what it means—that I have never shipped a bird or had one shipped to me that was not properly provided with plenty of room.

I have seen many birds arrive at shows dead, and in a large number of cases it was through being so closely packed that they smothered as soon as placed by the careless express messenger near a heated pipe. Give the birds plenty of room—pay the extra cost—have an easy mind, and you will win more through your birds being in much better condition.

OAKVALE YARDS—COLUMBIAN AND Buff Wyandottes; unparelleled record this season at Holyoke, Mass.; Gouverneur, Huevelton, Auburn and Ithaca; winning more firsts than all competitors combined. This demonstrates that our stock have the QUALITY, a reputation they have maintained for the past eight years; eggs, $2.00, $4.00 and $5.00 per 15; circular. E. S. Wilson, South Hammond, New York.

CHAMPION COLUMBIAN WYANDOTTES—Winners of more prizes and Specials at the Great Scranton Show than any competitor; including, 1st Pullet over 1st New York Pullet; almost a clean sweep at Wilkes Barre; also, S. C. White Leghorns; farm raised; eggs and stock for sale; send for mating list. Harry B. Miller, Clark's Summit, Pa. R. F. D.

COLUMBIAN WYANDOTTES. IF YOU want eggs from first class stock, bred from New York winners that have the size, color and shape, write for mating list; won 11 prizes on 11 entries in strong competition. I have a few choice utility Cockerels at $3.00 each that are good. E. D. Pierson, Addison, N. Y.

PARTRIDGE WYANDOTTES. WINnings at Buffalo: 1st, 3d, 4th Pullet; 3d, 4th Hen; 2d Cockerel. Rochester, on five entries: 1st, 2d, 3d Pullet; 1st Pen; 4th Cockerel; specials—best colored and shape female, best pen, best exhibit. Auburn: 1st Pen, 1st, 3d, 4th Pullet; eggs, $3 and $5 per 15. Harry M. Gates, Mt. Morris, N. Y.

COLUMBIAN WYANDOTTES. EGGS, $3.00 per 15. Pen contains the following winners: 1 pen (young), 2 Ckl., 1907; 1 Cock, 1908, Bradford, Pa.; 1 Cock, 1 and 2 Hen, 2 Pullet, 1 pen (old), 1908, Hornell; old birds hatched from $20 sitting eggs. Fred A. Burdett, Route 3, Hornell, N. Y.

SANBORN STRAIN BUFF WYANDOTTES—At Rochester, 1908, 1st pen, making second year my Buffs have been awarded 1st on pen; 1st and 4th Pullet and 4th Hen; all stock bred from Prize Winners; eggs for hatching. Chas. Pearson, Geneseo, N. Y.

WE PREPAY EXPRESSAGE—EGGS FROM Columbian, White, and Buff Wyandottes of rare quality, and great egg producers $3.00 per 30, mated for grand results. Geo. E. Crapsey, Toledo, Ohio, says there are none better. Cedar Hill Poultry Farm, Box 659, Saugerties, N. Y.

SILVER LACED WYANDOTTES FROM America's best. Eggs from Hagerstown, Carlisle, Dallastown, Wilkes-Barre winners. Send for circular and winning list before buying. John Ahl, Carlisle, Pa.

1,200 DUSTAN STRAIN WHITE WYANdottes and Nugget strain Buff Rocks line bred for eight years—for show points and eggs they are fine. Must be as described or birds can be returned and you get your money—you to be the judge. Allen Sechrist, Port Trevorton, Pa.

OUR BUFF WYANDOTTES HAVE WON at some of the largest shows in several states this season, also at the great Montreal, Que. show. 1908 catalogue, the most complete booklet ever published by breeders of this grand variety will be mailed free to any address. C. F. Smithers & Co., Heuvelton, N. Y.

BUFF WYANDOTTES. I WON THIS season 45 ribbons, including eleven 1sts, fourteen 2ds, six specials, at three shows—Riverhead, Mineola, and Richmond Hill. Eggs from matings, exhibition stock, and mated to produce winners. Stock for sale. Bargains in cockerels. Circular free. J. E. Willmarth, Amityville, N. Y.

BUFF WYANDOTTES EXCLUSIVELY—My birds are winners of the blue the past season at Kingston, Little Falls, Utica and Schenectady. Eggs from five grand pens all headed by solid buff males $2.50 per 15, $4.00 per 30. Order early. E. M. Budlong, Frankfort, N. Y.

FOR SALE—ONE PARTRIDGE WYANdotte Cock, 4th prize at Utica, $5.00; 1 Partridge Wyandotte Cockerel, $5.00. Wm. Russell, Boonvillle, N. Y.

EGGS FOR HATCHING FROM WYANdottes that are fit to compete in any company; won Silver Cup, blue ribbons, and every Special in a hot class of 108 Wyandottes; ten years a breeder of Whites: eggs, $2.00 per 15; $5.00 per 50. F. C. Hollamby, Weston's Mills, N. Y.

"BUFF WYANDOTTES: HOW TO Breed Good Ones." A breeder's handbook, by Dr. Sanborn. Solid Buff Color fully considered. Points out nedless mistakes. Timely hints on mating for show stock. Fresh from the press, postpaid, for twenty-five cents, silver or Money Order. Dr. N. W. Sanborn, Box, 866, Bellingham, Mass.

WHITE WYANDOTTES, DUSTON STRAIN—Scoring to 93¼ by Webb; Cockerels and Trios for sale; 15 eggs, $1.00; 30, $1.50. Top Notch Poultry Yards, Portville, N. Y.

LANGSHANS.

"CLOSING OUT SALE OF OUR ENTIRE stock of Black Langshans;" must be sold within thirty days; the lot includes winners at Boston, Madison Square Garden, Springfield, Buffalo, Auburn, Utica and Rochester, also Chicago. The flock consists of 1 Cock, 12 Ckls., 12 Pullets and 12 Hens, and will be sold in single pairs, trios, pens, or any way to suit. The Langshans are coming to the front, and this is a rare chance to get in the lead at once; will be sold dirt cheap to close out; write at once to Lee & Son, Walworth, N. Y.

New York State Branch of the Rhode Island Red Club

A number of the New York State members of the Rhode Island Red Club of America met at Schenectady, N. Y., on January 31st and formed a state branch, electing Mr. Robert Seaman of Jericho, N. Y., President; I. L. Whitmyre of Schenectady, N. Y., Vice-President; Hiram Green of Sherborne, N. Y., Secretary; and Mr. St. Clair Smith, Mr. Trafford, Mr. L. C. Mattison and Mr. George Tracy, with the three officers, were elected to constitute an executive committee.

The membership of the Rhode Island Red Club of America has made a wonderful growth the last few years, and numbers now approximately eight hundred members.

The duties of the secretary have increased in proportion with its membership and the forming of the New York State Branch will take a great deal of work off his hands.

One of the objects of the state branch will be to name judges who are qualified to judge the reds at shows held in this state. The placing of awards in the Red classes has been the subject of much comment and criticism, and it is the intention of the organization to name as judges men who are and have been breeders of Rhode Island Reds for some years, and who are thoroughly familiar with the standard requirements and qualified to place the awards in a satisfactory manner.

At the present time, in our largest shows the judges assigned to the Red classes are men who have never bred a Rhode Island Red, and from the way the awards are placed would lead one to think that they had never even read the standard description of them, and they cannot place the awards properly, which we consider a detriment to the breed.

The show room is supposed to be the school where the breeders go to be educated, and we propose to recommend men as judges who can instruct them. The placing of the State Cups offered by the parent organization will also come under the supervision of this branch and they will also offer special cups and ribbons.

New York State now stands second in number of members. With the forming of this state branch it will be well for the State of Massachusetts, which now stands at the head of the list in number of members, to look well to her laurels, as the New York State members propose to get a hustle on and maintain the prestige due the Empire State in being in the front ranks.

I appeal to all New York State members to join this branch and assist in the work we have taken up. Send fifty cents to the Secretary, Mr. Hiram Green, of Sherburne, N. Y., and become a member.

I. L. WHITMYRE,
Vice-President.

Schenectady, N. Y.

A Well-Known Incubator and Supply Company

From the catalogue of The United Incubator and Poultry Supply Manufacturing Co. we quote the following:

"The United Incubator and Poultry Supply Manufacturing Co. is not a trust in any sense of the word. If it were *all the other incubator companies would be in it.* The several companies who have heretofore acted independently, have simply united to save unnecessary expenses in manufacturing, and to give the consumer the benefit of that saving.

All the former companies now connected with this new company are well known to our readers. They are the Star Incubator and Brooder Co., The Empire State Incubator Co., The Pineland Incubator Co., The Great Eastern Incubator Co., The North-Western Poultry Supply Co., and The Star Manufacturing Co.

Mr. L. S. Bache

Mr. W. V. Russ

Mr. C. E. Paxton

Mr. L. S. Bache, President of the United Company, is a man well known to the incubator trade. He is acknowledged as an incubator expert, thoroughly competent to supervise the building of this class of goods. Mr. Bache was formerly president of the Star Incubator and Brooder Co. of Bound Brook, N. J.

Mr. C. E. Paxton, Vice-President of the United Company, formerly president of the Pineland Incubator Co. of Jamesburg, N. J., has been interested in poultry farming since boyhood, and for years has been a prominent manufacturer of incubators and brooders; shipping his machines to all parts of this and foreign countries.

Mr. Wm. V. Russ, Treasurer of the United Company, was the moving spirit of the Excelsior Wire and Poultry Supply Co. He is a man of broad business experience, thoroughly conversant with every need of the poultry raiser.

With such men at the head of the United Company the plan should be a splendid success, and there is no doubt but that they will be able to verify their claims that their "united" arrangement is for the benefit of consumers.

We suggest that our readers write them at 26-28 Vesey Street, New York City, for their incubator and brooder catalogue, also their complete supply of catalogues embracing everything for the poultryman. If there is anything to be saved by dealing with them our readers are entitled to it.

Kindly mention this paper when you write and the catalogues will be sent *free.*

(Continued from Page 8.)

Cornish Breeders.

At the Chicago show rooms, Friday, Jan. 24th, the Cornish Indian Club held their annual meeting. Election of officers by mail vote resulted as follows:

President, C. S. Brent; First Vice-President, R. D. Reider; Second Vice-President, John D. Mercer; Third Vice-President, J. W. Southmayd; Secretary-Treasurer, F. H. Williams. Executive Committee: Brent, Reider, W. S. Templeton, W. F. Knutzen.

Much enthusiam was shown at this meeting, and it lies with each and every fancier in the United States and Canada to make the Cornish fowl one of the most popular of all varieties. It was decided to change the name to *Cornish,* dropping both Indian and Game, for the best interest of the breed. The Club name also was changed to "The American Cornish Club." Breeders of White, Buff and Laced Cornish can now become members. It was voted at this meeting to issue a neat Club Catalogue, about forty-eight pages in size, during March or April, 1908. Advertising rates can be had by addressing the Secretary-Treasurer. We would urge every breeder of Cornish to join the Club *at once.* The total expense is one dollar per year, but your name in the new Catalogue as a prominent fancier of Cornish more than balances the small expense of becoming a member. By reading report of large entry of Cornish at the Chicago show, January, 1908, in all the prominent poultry publications, you will note the efforts of the Club and a few liberal fanciers, who kindly donated cash for specials, brought about this large entry, not forgetting the very liberal manner in which the poultry press have assisted us. Write at once to Secretary-Treasurer, enclosing one dollar for membership in the fastest growing club in the United States.

CHAS. S. BRENT, President,
Ocomomowoc, Wis.
F. H. WILLIAMS, Secretary-Treasurer,
Minneapolis, Minn.

National White Wyandotte Club.

The annual meeting was held at Cleveland, Ohio, January 19th, 1908, and in the absence of the president, Fred. E. Pile was chosen chairman, and A. H. Emch, secretary of the meeting, and at roll call, the following members answered: Fred. E. Pile, A. G. Clark, John Zipp, W. H. Huminston, Fred. Gruehle, W. T. Tobin, J. M. Moore, A. E. Gilbert, T. S. Meek, J. G. Rugh, F. S. Hawn, H. G. Hoffman, G. M. Bissell, A. H. Emch, M. F. Delano, George H. Alexander, G. R. Haswell. A general discussion of the Club's affairs followed; then the election. The following officers were elected: G. R. Haswell, Circleville, Ohio, President; M. F. Delano, Vineland, N. J., Vice-President; F. S. Hawn, Youngstown, Ohio, Secretary and Treasurer. Executive Committee: Charles D. Cleveland, West Orange, N. J.; B. S. Hume, French Village, Ill., and John S. Martin, Port Dover, Canada. The President was instructed to secure a bonding company bond for the new Secretary and Treasurer, in the sum of $2,000, and also notify all members to send all dues and memberships to the new Secretary and Treasurer, and all complaints to himself.

West Haven.

At the annual meeting of the West Haven Poultry Association, the following officers were elected for the ensuing year: President, E. L. Stevens; Vice-President, W. W. Gale; Vice-President J. E. Knecht; Secretary, F. J. Reveley; Treasurer, O. B. Cooper. The dates selected for their seventh exhibition on November 25, 26 and 27, and plans are already under way to make it the best and largest show ever held by the association. Public lectures, judging contests, etc., are planned to keep up interest and enthusiasm.

F. J. REVELY, Secretary,
East Haven, Conn.

Woonsocket Poultry Association.

The fourth annual exhibition of the Woonsocket Poultry Association will be held the same week as in the past, for 1908, and our dates are December 10, 11 and 12. We wished to change these dates so as not to conflict with so many other shows, but found it impossible to take other dates.

E. W. COOK,
Secretary.

PEDIGREED HOUDANS

Bred fron highest scoreing and egg record stock. All from 265 and up records, and winners in all the leading shows of the nation, and progeny my "Three Graces."

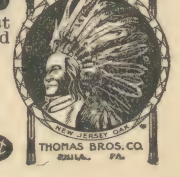
Write for catalogue and testimonials from those who have had stock and eggs from me.

In Philadelphia show, January, 1908, a customer won first and second on cockerels, first and second on pullets selected from thirteen chicks hatched July 6th from my eggs; also winning other prizes including silver cup for best display in strong competition.

A secretary for a great eastern poultry show writes, December 12th, that seventeen chicks from my eggs, hatched August 24th, averaged over four pounds, and that a Hondan judge said they were the best 17 Houdans he had ever seen in an unculled flock. This party has adult fowl from me that he says are the finest he has ever seen.

Guaranteed eggs from pure Dorking type fowl; no Creve or Polish blood in their veins.

A. E. JONES, Elkland, Pa.



Vice-President National Houdan Club for 1908.

CHARCOAL HELPS SICK FOWLS

Not a poison or drug, but an absorbent, filter, corrective. Most fowls die from diarrhea, loose bowels, or irritated crop and gizzard, etc. Charcoal absorbs gases and neutralizes fetid sourness of fermented food. $200.00 IN SIX MONTHS FROM 20 HENS.

To the average poultryman that would seem impossible, and when we tell you that we have actually done a $500.00 poultry business with 20 hens on a corner in the city garden 30 feet wide by 40 feet long we are simply stating facts.

It would not be possible to get such returns by any of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.

THE PHILO SYSTEM IS UNLIKE ALL OTHER WAYS OF KEEPING POULTRY

The New System Covers All Branches of the Work Necessary for Success,

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and a hammer can do the work.

Our Six Months Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month.

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING gives full particulars regarding these wonderful discoveries with simple, easy to understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

It also tells how to make a brooder for 25 cents that will automatically keep all lice off the chickens, or kill any that may be on them when put in the brooder.

Don't Let the Chickens Die in the Shell.

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 cents a Bushel.

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as to keep a cow without hay or fodder.

Our New Brooder Saves 2 cents on Each Chicken.

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

and in many respects is just the reverse accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing here, three cents per pound above the highest market price.

Three pound White Orpington roasters 10 weeks old, raised by the Philo System. Note the large well developed feet and legs, and the width of the pullet showing the front view.

VALLEY FALLS, N. Y., Sept. 5, 1907.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Poultry Keeping, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing," they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

(REV.) W. W. COX.

Your system of poultry keeping should appeal to all poultrymen. The advantages of your system are many, and the quality of the large flock of poultry you have raised on your city lot is the best evidence of its success.

Binghamton, N. Y. GEO. L. HARDING.

ABINGTON, MASS., NOV. 15, 1907.

The Philo System Book received to-day. It is beyond doubt the best thing of its kind that I have ever seen. There are one or two single items that I consider worth the full price of the book. I will begin to-morrow to remodel my plant to follow the lines laid down in your book as nearly as possible, and next fall I hope to have the business reduced to your exact methods to keep a flock of about 150 fowls.

M. R. BOND.

JACOBS CREEK, PA., NOV. 25, 1907.

I received the Philo System Book mailed to my home address, Beechtree, Pa. I am highly pleased with it, and am anxious to spread the good news as far as I can. I am a preacher of the Gospel engaged by the Baptist Ass'n to do Evangelistic work. I am on the road all the time, have about fourteen days in each town. I am very much interested in the hen and will do all I can to help the other fellow to know HOW, and to spread the good tidings received in the Philo System.

(REV.) F. B. WILLIAMS.

Special Introduction Offer.

By special arrangement we are able to give for only $1.00, the book with the right to use all patents. One year's subscription to Poultry Review—A monthly paper for utility breeders.

One year's subscription to The American Fancier—Published Semi-Monthly.

Upon receipt of $1.00 you will get the book by return mail and your subscription will start at once.

This offer is to old subscribers as well as new and gives them a chance of extending their subscription for one year.

Copy of the Philo System book and a year's subscription to Poultry Review and The American Fancier all for $1.00.

VOL. XXVIII NEW YORK CITY, MARCH 15, 1908. No. 699

Selling Eggs for Hatching

Written Expressly for THE AMERICAN FANCIER.

By REV. C. E. PETERSEN.

THE well-known cackle which is supposed to be a certain indication that a hen has laid an egg is now heard from one end of the land to the other, and it puts intending purchasers in mind that it is soon time to arrive at a conclusion whether to buy breeding stock or eggs for hatching, and very much may be said both for or against either.

It has, of course, never been successfully contradicted that wherever it is possible so to do, that buying breeding stock is very much better than to buy eggs, but where the real difficulty comes in, is the purchase money; for if first-class stock is desired it cannot be bought for a song, but will, according to the quality desired, cost for a trio anywhere from 10 to 1,000 dollars, the last figure having been paid several times over for the past few years for high class birds.

Birds of the less popular breeds can be bought in high quality at much less figures than of the more popular ones; for instance, a trio of Polish fowls that would bring $25 would, if the same quality was demanded, for instance in a trio of Barred Plymouth Rocks, cost several times over that price.

For this very reason there are a multitude of both men and women who finds it very much cheaper to purchase eggs for hatching, as from these eggs, if coming from a reliable strain, and a well-known and reliable firm, chickens may be hatched which they perhaps never would have been the proud owners of, if it had been a case of purchasing stock of the same high quality as were the chickens hatched from the eggs for which a few dollars were paid.

It is, of course, true that the buying of eggs for hatching is more or less of a lottery, for no dealer who knows in the slightest degree what he is doing can or will guarantee any percentage of a hatch, as it is well known that after eggs leave his hands they become subject to conditions that he cannot control; yet after a thorough investigation of the subject, there are hundreds and thousands of chickens hatched every years from traveled eggs, and a good many noted winners at our best shows. both here and in Canada, have been hatched from eggs that have traveled hundreds of miles before finally incubated.

It is really a very doubtful gain on the part of the fancier who sells eggs for hatching, for if he is on the square—and we are glad to say that most fanciers are, though at the same time we most reluctantly have to confess that there are scoundrels in the poultry business as well as in any other busines, though it is geting harder every year under the continuous vigilance of the postal authorities to keep it up; but when the fancier of any noted strain of birds, that have not come into the glare of publicity by a few recent winnings made in doubtful competition, but who after years of continued success sells eggs, he confers a benefit on the purchaser by giving him the opportunity of getting, for a few dollars, the results of sometimes twenty or more years of selective breeding.

So true is this that at the present time there are many fanciers who absolutely refuse to sell eggs from their strains both here and abroad, and who can blame them, when stock raised from these eggs would bring them hundreds of dollars more than what they got in return for the eggs?

It is a fact which is well understood by all noted breeders that there are only very few great sires, and very few great dams, and after the selection of such birds have taken place, they constitute a very few great birds; not twenty or thirty breeding yards; no, not even twenty or thirty fowls of some hard to breed varieties, but a few well-selected pens that the fancier looks at with delight and from which he sells eggs reluctantly if he sells any.

Where so-called ordinary pure bred stock for utility purposes are wanted, it changes the entire question, and the country is yearly demanding this grade of stock for stocking our farms with, to give pleasure to the man who don't care for exhibition stock, but who wants a nice thoroughbred fowl, good to look at, and at the same time giving him plenty eggs and a nicely flavored morsel of flesh whenever he and his family desire it; but the real exhibition bred fancy fowl is rare, and eggs from such stock is worth all the fancier can get for them. Yet, for all that, eggs will be sold yearly, and when sold the buyer has his rights, and so the seller, and we will here state some of them that will, we believe, be fair to both.

It must always be taken into consideration that eggs that are in transit are subject to rough handling, and so to secure every possible chance that the purchaser, will get a good hatch, the dealer should and must pack the eggs in such a way that in route they will receive the minimum amount of rough handling.

Every package should be plainly stamped "Eggs for Hatching; Handle With Care," and to make double sure of a successful journey, a handle is a necessary adjunct to an egg package, as the average person will always grab a thing, whatever it is, by the handle if the handle is in plain sight and easily taken hold of.

Next to this, all eggs sent out should be of the ordinary size laid by that respective breed who laid the eggs; they should be absolutely free from deformities of any kind; rough shelled, thin shell and wringled shells should be avoided—they never hatch; and a thin shelled egg will break in the nest or package and spoil a lot more.

Again: Eggs are not fit for hatching except the shells are strong, smooth and regular, and the eggs the usual size laid by the hen.

Sunburst II Bred Owned & Exhibited By C.F.SMITHERS & CO., HEUVELTON, N.Y.

No eggs should be sent out without a positive knowledge that they are hatching well at home and are running strongly fertile, for when a person pays from $3 to $5 for a setting of eggs he is within his rights to demand of the dealer eggs that are strongly fertile; chickens cannot be hatched from a lot of clear eggs.

If eggs are wanted from a certain breeding yard very early in the season when eggs do not run strongly fertile, and there is an understanding to this effect between the dealer and the purchaser, it alters the case, and the dealer then cannot be held responsible.

I have already hinted that no person can guarantee a certain percentage of a hatch, owing to conditions they are liable to meet with in transit, such as chilling, overheating, and careless handling, yet any honorable breeder will do what is right and reasonable to satisfy a customer who has had a particularly unfortunate hatch, but what every breeder must guarantee is safe delivery of package, for it is surely his business to so pack the eggs that they will be safe from breakage except in a case of such gross neglect on the part of the express companies where the whole package is smashed, and in such a case the company will pay damages.

On the part of the purchaser there are lots of things for which no dealer can possibly be held responsible. I have known eggs to arrive safely at a certain station, thrown into the bottom of a stage coach and then rumbled over frozen roads for fifteen miles and the dealer blamed because the eggs did no hatch.

If you intend to purchase eggs and you live several miles from the railroad station, inform the agent that you expect a basket of eggs for hatching and to hold same till you come in person after them.

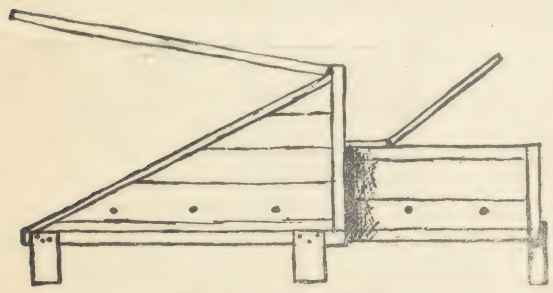
If you cannot do this, then tell the stage driver the same thing; tell him to put the basket on the seat with him, and handle it careful and he will do so, but if you don't he is generally busy with other things and pays no attention. A word or two helps out matters immensely and this is doing your part to get a good hatch from the eggs.

We will suppose you have a hen that has been sitting for several days waiting for the eggs to be put under her—it should be preferable an old hen; pullets do not make reliable sitters; they cannot always be depended on to finish the contract.

And of all things be sure that you have made a correct nest with a flat bottom in which she can turn and move the eggs without breaking them. Most people make a nest that slopes down to the bottom like a pit and it is a pit of danger to every egg in it; the outer ones press on the centre ones, and in moving the eggs round in the nest the hen will break them.

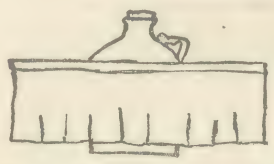
Make the nest first, then put in it the hen, let her shape it to suit herself and all will be well; that is the hen's part to get a good hatch; but if you make the nest and put the eggs in it and before she has reshaped the nest, she is helpless and will more than likely break a number of eggs in trying to do that which is impossible. When the hen has established herself on the eggs let her alone; don't disturb her, but for all that keep an eye on her till you know you are sure of her.

At hatching time be still more careful; don't sprinkle the eggs—it is an old, antiquated habit and of little use—nor put your hand under the hen to see how many eggs are pipped; this little piece of curiosity has spoiled many a good hatch, and then afterward you told the dealer that you had to help the chicks out of the shell, for they were too weak to get out themselves and they all died. Of course they did. But you killed them by at the crucial moment of the hatch, lifting the hen from her nest, and letting in a lot of drying air which glued the chicken to the shell. Again I say, let her alone from start to finish except an accident happens to the eggs, and then the dealer from which you purchased the eggs may get a nice letter from you, that you hatched a nice lot of strong little chickens.



A Fireless and Fire-Proof Home-Made Brooder

By Herbert William La Due.



DESPITE the extravagant claims of the various brooder manufacturers, that their brooders will raise all the chicks, the perfect machine has yet to be invented. It is next to impossible to raise every chick put in any machine of today.

I have raised many chicks, but I have never found a brooder that would work as well as one of my own make. After losing many chicks in the standard brooders of the day, and comparing them with mine, I am sure that this one will do better work, and that with less than half the expense.

To make the brooder, procure a large box, one made of matched lumber, if possible. Set it up on legs about six inches from the ground, to keep rats from molesting the chicks. Then get a small box, about two by two feet. Take off one side of this box, and attach it to the back of the large box. Cut a small door between the two. Hinge the top of the smaller so that it will open like a cover.

The brooder when finished

The jug filled with hot water acts as a heater

Get a window the width of the large compartment and long enough to reach diagonally from the bottom of the front to the top of the back. You can generally buy one from a wrecking-house cheaply. Tear off the top and front sides of the large box, and put two cleats on the inside as a rest for the window. Then saw off the projecting sides. Hinge the window to the top of the box. The sun's rays, coming in through the window, will heat the main box in the day time. At night the chicks are to be kept in the small box.

Procure a jug about eight inches in diameter. Take a barrel-top two feet across, and cut a hole in the center large enough to fit over the top of the jug like a collar. Tack some thick cloth—muslin preferably—arunod the edge, and slit it at intervals of two inches. You thus have a good hover. If the jug is filled with hot water at night, it will keep warm until morning. The expense and nuisance of a lamp are done away with by this plan, and there is absolutely no danger from fire.

For ventilation, bore three holes eight inches high on one side of the brooder and nine inches on the other. I have raised two broods of thirty each in one of these brooders, and each time have not lost one except by accident.

The cost of the brooder was as follows:

Two boxes	$0.60
Window	.75
Vinegar-jug	.25
Hinges	.10
Muslin	.10
Barrel-top	.10
Total	$1.90

Hatching with Hens

The best sitters are those breeds with Asiatic or Game blood in them. The first are tame, but rather clumsy; the second light-footed, but of pugnacious character. The latter trait may or may not be an advantage. I have had a Game hen which always killed a strange chicken which came within range of its beak; on the other hand, on a rat attempting to burrow under the coop, she drove away the intruders; while a gentle Cochin hen would take any chickens offered her, permitted a rat to burrow under her coop and kill every chick she had. The logical conclusion is that a Game-Cochin cross makes the best broody hen; but this cross is unpopular, because the hens are such shocking bad layers. I think, among present-day breeds, the buff Orpington produces the best broody. She is of good size, quiet of disposition, and sits steadily. Wyandottes of all varieties are also good.

One of the faults novices make—or let me amend the phrase, and say one of the faults we all made when we were novices—is to be in too great a hurry. As soon as a hen begins to cluck they remove her, and give her a clutch of eggs, and, as often as not, the change of *locale* puts the hen of the broody fit. Wait till the hen sits steadily for a day or two before trusting her with eggs, and when she has to be moved, always do it at night. A special shed or outhouse should be set apart for them. In the Aylesbury district, where they use—or did when I last visited it—broodies by the hundred for hatching ducklings, each hen has her separate nest-box. This should be some fifteen inches square, be partly open at the top and quite open at the bottom, for the boxes should stand on the ground. This, however, is not a universal practice; some big users of the hen as a hatcher use wooden bottoms to the nest-box, and do not damp the eggs.

This question of moisture demands a paragraph to itself. As to the wisdom or otherwise of doing it, I confess I am not so cock-sure as I was years ago. I have known a hen to sit in a loft on a heap of straw and hatch every fertile egg. I have set eggs on damp earth, springled them with warm water, and soaked them in a pail of hot water on the nineteenth day, and the hen has hatched every "live" egg. In fact, the more one studies the question, the more one wonders which is correct. The hen herself exudes a certain amount of perspiration. Has the poultry-keeper ever noticed a certain dampness on the skin of a broody? This is called "hen oil," and has a beneficial effect on the eggs. It supplies the amount of moisture needed to prevent the inner membrane from getting too dry and tough. It is possible that atmospheric conditions have something to do with the variability of eggs hatching. Sometimes our atmosphere is very dry, and then, I fancy, unless the eggs get some extra moisture, the chickens have a difficulty in breaking out of the shell. Yet it ought not to be so. A bird is a bird, and the small wild birds keep their nests very dry, and yet hardly ever have cases of "dead in shell," which are so painfully common to the poultry-keeper. On the whole, I am against damping the eggs, unless they get dirty, when they should be wiped with a damp rag. If the poultry-keeper has set his or her heart on the soaking in water business, this operation should be performed on the nineteenth day, when the eggs ought to be "stirring"—that is, the first faint sign of the chick trying to emerge from its prison should be showing. The water should be at hatching temperature—103 degrees, or thereabouts—not higher. Drop the eggs in, and watch them. Those which contain live chicks will presently begin to bob about, like floats when a fish is nibbling. The eggs with dead chicks in them will sink, and the addled eggs float motionless. The "live" eggs should be taken out, wiped, and returned under the hen. The soaking helps to soften the membrane; but occasionally it kills the chick, which takes a chill if the owner is not careful. On the whole, I think as many are killed as saved by the treatment.

When we come to the critical hatching stage, it must be confessed that the incubator has a pull over the average hen. Even a model sitting hen sometimes crushes a chick to death; still, in all cases when no incubator is available we must trust to the hen, and meddle with her as little as possible. Of course, some hens will stand any amount of interference and being lifted up to see how the eggs are getting on after they have been chipped; but this never does any good in any case. On the morning of the twentieth day, when, if the eggs are fresh, we anticipate some of the chicks making their appearance, the hen will probably decline to come off to feed. Lift her off gently, and take a look at the nest; remove any egg-shells which may be lying in it. The hen generally throws these out, but occasionally a half-shell slips over another egg, and prevents a chicken from making its escape from its own shell. It is just as well to remove all the chickens that are dry save one (if all are removed the hen may get fidgety, and decline to stick to the nest), and put them in a flannel-lined basket near the fire. Leave the hen quite alone for the next twenty-four hours; the whole brood will generally be out by then. Give the hen a good feed by herself, and then coop her out with her chicks, and let them have their first meal, for which those hatched the day before will now be ready. It is a mistake to let the chicks go forty-eight hours without food. Feed when twenty-four hours out of the shell; but a few hours one way or the other makes no difference.

—*Feathered Life.*

A fowl suffering from apoplexy due to an affection of the brain should be killed. Although she may live for a time is is impossible to cure her.

The Ancona

The points which I consider require most attention from breeders and judges are: Evenness and distinctness of mottling, and lobe; and to get rid of high tails and such light flights, says H. B. Dixon in *Pigeons and Poultry*. This latter fault I have noticed is very common among strains of doubtful origin; most probably where the so-called Ancona is no Ancona at all. I am sorry to say that I could mention at least one stud of "Anconas" which are not, and whose predecessors never were, related to the genuine Italian Ancona.

I consider Anconas at their best for laying during their second and third seasons, though they are not to be discarded until the end of their fourth, if well kept.

The saying that "like produces like" holds good in many things; and certainly does so in respect to Anconas—a breed in which prepotency is evident to a very fine degree, and which is one of the most difficult to breed to an established standard of excellence. To help this breed on, breeders of high-class stock want to give more attention to the breed itself, and rather less to their own fads and fancies. To make anything of the Ancona you must make it your speciality, for nothing below a keen judgment and patience can hope to produce anything approaching the ideal, and to anyone requiring a piece of tough work I can confidently recommend this breed, if they would bring it up to standard requirements.

As I mentioned previously, in size the Ancona ought to resemble a good buff Leghorn, and weighing anything like 6½ to 7½ lbs. The ground color must be as rich a black or beetle green as possible, which should extend right down to the skin, and not run into a light grey or white. On every feather on the bird there should be a small distinct white tip or mottle, which must be as even as possible, though, of course, it will vary with the different class of feathers. The comb must be of medium size, fine in texture, evenly serrated with deep wedge-shaped spikes, in number five to seven, hanging neatly over side of face in pullets, and standing as upright and straight as possible in the males, firmly set on, and coming with a slight downward curve well back over the head. The lobe should be of fair size, almond shaped, free from creases or folds, and white in color. The eye to be bright and sharp looking, in color, iris, orange red; pupil, hazel. The beak of a rich yellow color, stained with black, of moderate length, with a nice curve. The wattles must be of size, in proportion to the comb, and well rounded. The color of comb, face, and wattles should be a rich healthy red.

The legs fairly strong, not too long, well set apart, and as evenly mottled down the front as possible with black, free from feathering, with toes long and thin, well spread out, mottling continued from leg, and four in number. In feather the Ancona should be tight and close, carrying flights and tail closely folded.

Anthracite Tales

A FEW of the old stagers were discussing the question of feather plucking at a meeting the other night and reference was made to the fact that writers on poultry subjects almost invariably ascribe the cause to lack of meat or animal food. E. L. Tiffany was one of the party and when "Tif" speaks on poultry matters we all know it means something. I butcher from ten to twenty head of stock each month the year around — that's a part of my business, you know. There ain't a minute my birds don't have all the fresh meat and blood they can lay to. It's in their pens all the time. Now my best pen of Brahmas got at it this winter. I kept them in a small pen and they huddled up together. One old hen started it, and pretty soon they all got at it. They had ashes and lime, and got salt in their soft feed every morning. I told my wife to give 'em all the feathers they wanted, and she dumped in a fresh pan full. Didn't feed 'em for three days. Do you think they'd touch them feathers? No, sir. I tell you just keep them busy—just hungry enough so they are always hunting for just another little bit to eat, and if they ain't got the habit they'll never get it. Another thing; they are always telling you to scatter slacked lime in your chicken houses. I tried it four or five years ago in one pen. In about three days I noticed every bird in that pen was wheezing—had sore eyes, inflammation of throat and lungs, couldn't eat—just like a cold and I lost about half of them. Not a bird in the other pens around showed a thing wrong. I tell you boys you might as well try to eat all you see as to believe all you read in these chicken papers. If one of them makes a mistake they all copy it. I'm just telling you the way I've found it. Now there's old Petie about a mile from me, you know the kind of games he raises, never loses a bird he hatches, bred 'em in for thirty years, never cleans his hen houses. I'll bet there's manure under some of the roosts three feet deep—won't let anyone touch it—couldn't find a louse around the place. He says it cures colds, too, and I should say it would if the smell of ammonia when you stick your head in there is any good for it. He leaves everything wide open the year around. Now what do you think of that?" From an experience of over 25 years the writer has ample proof of the correctness of the above conclusions. The finest lot of game bantams, as far as health and condition is concerned, we ever raised, was part of a bunch that persisted in roosting over a manger nearly full of old droppings in a cow shed which was minus the door and front. The smell of ammoniacal gas was easily detected and we have at different times seen birds having a slight cold roosting there in the day time. The slightly perceptible fumes of the ammonia appearing to give them relief. Dr. Cooper in the "Game Fowl" strongly indorses this conclusion. It should be understood that fresh droppings have no terror for lice and are probably not particularly beneficial to health. Brooding is another thing which admits of no halfway method. A woman of our acquaintance, one of the most successful poultry raisers we know, noted for her small losses and vigorous, healthy growth of her birds, takes the newly hatched chicks, whether early or late in the season, puts them in soap boxes covered over the top with bags or blankets, and lets them run as soon as they are strong enough. Drooping chicks that rannot eat, showing mucuous in the throat and with swollen eyes are the result of attempting to brood them under hovers open on two or more sides. This was my experience before we found a brooder that would raise game bantams. The heated air pours out at top of the flaps, sucking in cold air at the bottom, causing a draught that the soap box above mentioned is free from. There is still a great vacuum open for accurate information on poultry matters.—*Black Red,* Scranton, Pa.

Experience With Pekin Ducks

By A. F. JONES.

In the January issue of THE FANCIER, under the heading, "Water Fowl," the writer asks for the experience of others as to their success with water fowl. My experience has been with the Pekin Duck, which I believe to be the best all purpose duck that we have. To begin with, I started in the Spring of 1906, with one pen of Pekins, and raised that year about 50 fine ducks that I sold as fast as they got large enough, often selling young ducks that would weight from 3 to 4½ lbs. alive, at one dollar each, and when dressed for my customers I charged 25 cents per pound, and they were all sold off just as fast as they became large enough. I also exhibited some at local fairs, and had the pleasure of winning several 1st and 2d premiums; at one fair I won 2d on old duck in a class of thirty-three entries.

In the Spring of 1907, I started with three pens of one male and four females each, and succeeded in raising over 200 fine young ducks, confident of my success the first year in making quite a tidy sum from the 200 this year. But right here my troubles commenced. The price of feed began to soar, and kept right on climbing, and as my flock grew and developed, it required more grain to feed them. My customers of the year before didn't take them as fast as they had, and the local market men said the weather was too warm for ducks, and so it went. The ducks were growing larger, and so was the feed bill, until in desperation I closed out 50 at one sale, but I won't tell you what I got for them. I hope that I got my feed money back out of them, but would not like to make an affidavit to that effect. This year I exhibited at two fairs and one poultry show. At the first fair winning everything in all classes, both old and young, in the open classes, and 1st and 2d pens, and at the great Danbury Agricultural Fair my ducks won 1st and 2d young drake, 1st and 2d young duck, 1st old duck and 2d old drake, on 6 entries, and at the poultry show, 3 1st and one 2d on 4 entries, and right here to the beginner, let me state that the *best* is always the *cheapest.* If you can't afford to buy 6 good ducks, then buy three, and if you are not posted on ducks, take some one with you that is. My experience has been that you can save money and get better stock by going to the duck farm and picking out the ones you want for breeders.

Ducks are the easiest thing in the poultry line to raise. Have them hatch in April and May, and pay half as much attention to them as you would the same number of chickens and the death rate can be held down to a very low percentage, and I find it nothing unusual to have them take on from ½ to ¾ of a pound of meat a week, and to weigh from 4 to 6 pounds at 12 weeks old; then all you want is a market, and be sure you have one, for every day you feed them after 12 weeks of age, your profits will diminish. At the present time, Jan. 23, my egg yield is better than 40 per cent.

A Winning White Rock Cockerel, bred and owned by Raymond Swab, Norristown, Pa.

"Here," said Senator Newlands the other day, "is a Neveda pun."

"An old farmer sat on the doorstep smoking his pipe. His favorite hen pecked near him. He regarded the hen indulgently as he puffed the smoke into the clear evening air.

"All of a sudden he gave a start of astonishment.

"'By jingo,' he said, 'the old hen is eating stray tacks. Can she be going to lay a carpet?'"

Published by

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

THE illustration on cover page represents winner of the Shape Special at the last Madison Square Garden Exhibition, owned by R. L. Seaman, Jericho, N. Y.

From a recent conversation with Mr. Seaman we learn that he has had a very successful season and in addition to his individual success, seems much pleased with the widespread popularity that is increasing daily for the Rhode Island Reds. Mr. Seaman has for years been known as a fancier of this breed and recently has been brought conspicuously before the poultry men of Long Island by his interest and management of different Long Island Poultry Associations. He is now making arrangements for the poultry exhibition to be held in Brooklyn.

* * *

Ability makes the poultry business successful and reliability keeps it so.

* * *

Many of the large newspapers devote from a half to an entire page in their Sunday issues to an article on raising poultry. Conversing with some of the editors we find that this subject always proves of interest to their readers and especially to the suburbanites. Although some of the articles are written by men of authority and contain valuable information, many are from the pens of amateurs with little knowledge of poultry raising, but a fairly well understanding of how to compile—not compose—an article on this subject.

* * *

When you fail, blame someone else, and you will remain a failure, but if you blame yourself and try over again, you will succeed.

* * *

The recent Kansas City Poultry Exhibition was judged by the score card system and although this judging was done very quickly and satisfactorily, it was too slow for an exhibition of this size. In the future, we understand, this exhibition will change from the score card judging to the comparison.

* * *

A Yearly Ad. is Better

than just inserting an ad. now and then. It keeps the name always before the public and one cannot tell just when the reader of a magazine will reply. Oftentimes the profit from a single order will more than triple the cost of the entire year's advertising.

By visiting successful poultry plants and telling our readers what we see and the way of housing and the method of feeding, we can give information which in many cases will be more valuable than that contained in exclusive articles on the subject of housing and feeding.

We will visit the poultry plants that are successful and as space permits we will from time to time describe them.

In our issue of March 1st we published a picture and short article on Domesticated Wild Geese at the House Rock Farm, Weymouh, Mass., owned by Mr. C. M. Bryant, President of the American Poultry Association.

In this issue will be found a description of the Sunnybrook Farm and an explanation of their way for housing and feeding.

To know the methods operated by those who have succeeded is of great value.

* * *

Fifteen large poultry fattening establishments are owned or controlled by Armour & Co. The chickens fattened at these stations are bought when six weeks old and sold when from nine weeks to two months. This company annually disposes of over 20,000 chickens in this way, the majority of which are sold for export. The total valuation of the annual poultry business of this firm is said to be $1,400,000.

* * *

Farmer Fullerton, the Long Island Railroad Company Experimental Station's director, in the last issue of the *Agronomist,* tells farmers how to pay taxes and interest by raising poultry. He prescribes a mixed diet.

* * *

About 2,000 carloads of poultry are received and consumed annually in Manhattan and about 9,000 carloads of eggs.

Ribbons at Jamestown

American Fancier:

Dear Sir—Kindly mention in the columns of your valuable publication that I will duplicate the Jamestown Poultry Show premium ribbons for the benefit of the exhibitors who did not receive them, on account of their being taken off the coops in the show room or while being returned home. There may be a number of your readers who are entitled to them and who failed to receive them.

Yours very truly,

JNO. A. MURKIN.

Continuous Advertising

A poultry advertiser recently said "I have been a firm believer in constant advertising, never dropping my ads. during the so-called dull months. I find this has paid me well. I have been careful not to make any misstatements or exaggerations. My birds have been big winners for years, but these winnings would have been of little value without judicious advertising.

"The man who doubts himself is like the chap that rowed all night with his boat tied to the stake."

* * *

"A Knock"

An advertising solicitor for one of our contemporaries was introduced to a breeder at the Boston show, and, in explaining the advertising merits of his publication, compared it with other journals, all which he "knocked." He said his publication would bring advertisers ten times the number of replies which were received from yours truly—THE AMERICAN FANCIER. The breeder, to whom this advertising solicitor was talking, perchanced to have an ad. in his publication, but it was under the name of a poultry farm, his name not appearing. He also advertised in THE AMERICAN FANCIER, and told the advertising solicitor that his paper brought only two replies, while THE AMERICAN FANCIER had brought thirty-seven.

A "knock" never does any damage, except to the "knocker," but it is a mean, contemptible, underhand method, pursued only by men of the Dr. Jeckel and Mr. Hyde type.

Buff Orpington Club Catalogue

The 1908 club catalogue of the National S. C. Buff Orpington Club is now ready for distribution, and a copy will be mailed to any one interested in poultry raising. This catalogue is the best book ever published on Buff Orpingtons, and will interest any one, whether they breed Buffs or not. The club has double its membership in the last two months, and is classed as one of the leading specialty clubs in America. Address the secretary, Will H. Schadt, Goshen, Ind., for a copy of the catalogue.

National Langshan Club

EDITOR AMERICAN FANCIER:

Another expansion has taken place in the Langshan Fancy! Yielding to the persistent demands for breeders of this valuable fowl, the Eastern Langshan Club's executive committee, with the consent of the members, on January 1, 1908, at Neriden Show, changed the name to "National Langshan Club," with the following officers: President, P. P. Ives, Guilford, Conn.; Vice President, Henry Cundell, Englewood, N. J.; Secretary-Treasurer, John Aldric, Springfield, Mass. Directors: J. H. Bladwin, Plantsville, Conn., and E. T. Gibson, Nashua, N. H.

Just a word as to what the club proposes to do the following year for the good of the breed, for upon that basis we solicit the suppport of EVERY breeder of this fowl, in BOTH varieties.

Ribbons will be offered at every show in the United States and Canada for members. A splendid bronze medal will be offered to members in every state and territory in the United States, and every province in Canada, same to be awarded to the member living in the state, territory or province who shall exhibit in the state and gain the most points in competition. This makes it open the entire season and gives every breeder a chance. There will be a National show once each year in some city selected, the show not to be held in the same city again until after a lapse of four years. At this show will be offered, in addition to the regular ribbons, such specials as the members donate, and also diplomas for the best cock, cockerel, hen and pullet, respectively.

State and sectional shows will be authorized by the executive committee and diplomas offered there.

Nor is this all; we want the utility breeders as well, and to that end we shall offer at each national, state and sectional show, diplomas for the best dressed male, female and capon, respectively.

Beginning November 1, 1908, the club will conduct two utility contests; a laying contest and a profit contest. To the one publishing in any poultry journal in the United States and Canada, a sworn account of the best egg yield from Langshans, both varieties to compete, a diploma will be awarded. Further rules will appear in the club circular. Also, to the person showing the best profit from November 1, 1908, for one year, record in full to be published and sworn to, a diploma will be given. Rules will be so drawn as to protect all parties from unscrupulous persons.

We also aim to protect the public, for our rules provide that any one crossing any other breed upon pure Langshan and offering the same for pure bred Langshan, or any one dealing fraudulently with the public in the sale of eggs or stock, or otherwise, will be expelled from the club, and the same printed in the National Langshan Year Book.

Each year a book of the club will be published under the name of National Langshan Year Book; first edition is now in progress. Advertisements for same are solicited.

State secretaries will be appointed in each state to look after the interests of the club.

Fees: First year, $2; thereafter, $1 per year. List of members, and those making donations for special or general purposes of the club will be published in the Year Book.

All breeders of Langshans—YOU—are invited to join us. We care for both varieties!

JOHN ALDRICH,
Sec.-Treas.

The American Buff Plymouth Rock Club

The eleventh annual meeting of the Buff Rock Club was held at Indianapolis, Indiana, February 5, 1908. Twenty-five members from five different states were in attendance. The report of the Secretary-Treasurer showed a remarkable growth in membership, almost 100% for the past year, and a flourishing financial condition.

The most important change in the club work, was the move to get closer co-operation among members, by the division of the country into its seven natural divisions, and the election for each of a Vice-President, with specific duties to perform. These districts will be called the New England, comprising the New England States; Eastern, which is composed of Ontario, New York, Pennsylvania, New Jersey, Delaware and Maryland; Southern, composed of the states south of Ohio and east of the Mississippi River; Central, consisting of Ohio, Indiana, Illinois, Michigan and Wisconsin; Northwestern, which includes Iowa, Nebraska and the states west of the Mississippi, and north of the Missouri line; Southwest, the states south and west; Pacific Coast, the three Coast states. Each of these districts will have a district championship cup, and the privilege of nominating its Vice-President. Greater interest in the club will be maintained by this localization of benefits.

The following officers were elected for the coming year:

Executive Committee: C. W. Fowler, President, Smyrna; Wm. A .Stolts, Secretary and Treasurer, Indianapolis, Ind.; Dr. C. W. Coolidge, Bristol, N. H.; W. A. Reed, McDonald, Pa.; G. P. Mason, Fayette, Mo.

District Vice-Presidents: New England, E. A. Willis, Brockton, Mass.; Eastern, L. B. Hindman, Beaver, Pa.; Southern, W. G. McDavid, Greenville, N. C.; Central, N. M. McCullough, Anderson, Ind.; Northwestern, D. E. Hale, Wayzata, Minn.; Southwestern, C. R. Baker, Abeline, Kan.; Pacific Coast, D. J. Beinhart, Kenewick, Wash.

FARM FOR SALE

About 23 acres including 31 fifty-feet wide lots fronting on two roads along which is the Main Line Trolley from Plainfield to Bound Brook—twenty-five minutes to Plainfield, ten to Dunellen, fifteen to Bound Brook—N. J. Central R. R. Stations.

Bound Brook Stream one side of place—Postal service at gate—Gas and Electric Light service in road.

House contains 12 rooms, including Bath and Attic—Laundry—Steam-heated.

Barn, carriage house, wood-shed, grain-house, many coops and runs. Fruit and shade trees and many grape-vines.

Price $12,000.00.
Part could be left on mortgage.

WHITE ROCK EGGS FOR SALE

From Madison Square Winners 1907

Torresdale Poultry Farm. Torresdale, Pennsylvania

American Plymouth Club

At the annual meeting of the above club, many items of interest were brought before the meeting that will interest every Barred Rock Breeder.

The club constitution was amended in regard to the offering of special prizes at poultry shows; also in regard to the showing of birds. A complete report will be sent free to all asking.

The following officers were elected: President, C. H. Latham; Vice Presidents, Messrs. M. S. Gardner, Dr. O. P. Bennett, H. D. Riley, O. L. King, E. B. Thompson, M. W. Baldwin and B. S. Davis.

Executive Committee: A. C. Smith, C. H. Welles, F. W. Richardson, M. F. Delano, C. H. Shaylor, Chas. McClave, A. C. Hawkins. Secretary and Treasurer, H. P. Schwab, Irondequoit, N. Y.

The club will issue a new club catalogue this Spring.

* * *

Success With Chicks

An authority on poultry subjects recently declared that fully $200,000,000 is lost annually by poultry raisers through poor chick management—the chicks dying. We are not in a position to verify this estimate, but we do know a large percentage of chicks to die. That this can be reduced, there is no question; that it should be reduced, is also true, for no one has any moral license to be careless or unprogressive when it means so much to himself, his family and his country.

Broadly speaking, the greater part of the trouble seems to lie more in the means than in the method, and mainly in the feeding. By this is meant that hardly any poultry raiser worthy of the name can fail to appreciate the importance of being systematic in his work; of having his hen house absolutely free from drafts and dampness; of keeping it strictly clean and providing a constant supply of good fresh air and water, with plenty of space for exercise.

If these deductions are correct, and the facts seem to support them conclusively, the whole question resolves itself in what should be fed, and when. On this, it must be admitted, there has been a wide difference of opinion, and those raisers whose ideas have been fairly successful have been inclined to stick to them in spite of better judgment. This, of course, is short-sightedness, but it must be remembered that science has not done much in poultry matters until the last several years. What it has accomplished, however, is indeed most noteworthy, and if not a complete solution of the chick feeding problem, is certainly a great advance in that direction. We refer to the chick feed manufactured by the well-known supply house of Darling & Company, who has two large plants—one at Chicago, Illinois, and one at Long Island City, New York, and who, by the way, puts out a catalogue that is interesting to a high degree, and we understand free for the asking.

From the standpoint of digestion and nutrition, which are concedely the chief features of any chick feed, this feed has already given results that prove it to be unexcelled.

From time to time we notice mistakes in the official list of poultry exhibition winners. It is very important that the list is compiled without any mistakes, and we trust all Secretaries in the future will be more careful.

* * *

In the Danbury Show awards, Elmer L. Brundage should have been credited with winning 1st and 2d Barred Rock Cockerels.

* * *

In the report of the Philadelphia Show, Clearview Poultry Farm, was credited with winning 1st Pullet, S. C. Buff Leghorns, and H. H. Schantz, 2d. It should have been 1st Pullet, H. H. Schantz, and 2d Pullet, Clearview Poultry Farm.

Mr. Edgar Briggs, of New Rochelle, N. Y., has removed to his new 60 acre farm at Pleasant Valley, N. Y., where he is building a poultry plant to carry 2,000 layers. The breeds will be Single Comb White Leghorns and White Wyandottes. We understand, his book, "Profits in Poultry Keeping Solved," is having a great sale. Although fanciers are divided in their opinions of successful feeding for egg production, we have many favorable comments regarding Mr. Briggs' method.

The growths at the side of the mouth after a case of roup can be removed with a sharp knife. The sore should then be dusted with a dry roup powder and the mouth of the fowl held open until this powder is well absorbed. The place should not be touched again for ten days when the remaining growth will come away without leaving any sore.

BUFF WYANDOTTES

My birds at Boston, Jan. 1908, in the hottest class of Buffs ever shown, won the following:

12 Entries. 1st Cock, 4 and 6 Hens, 6th Pullets.

All these PRIZE WINNERS are in my breeding pens.

¶ Egg orders booked now from my best pen headed by first Buff Wyandotte Cock, Boston, $5.00 per 15. Other choice pens $2.00 to $3.00 per 15.

STUART A. HOWLAND,

(Riddell Champion Strain.) Granville, N. Y.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

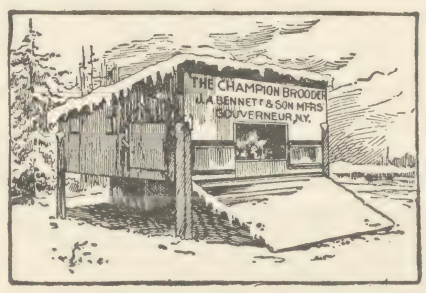
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.



HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

resident, American Houdan Club. From 1900 to 1907.

Champion Brooders

Have raised more prize winners than all other brooders. Over 100,000 in use. Operates outdoors or indoors. No leg weakness, bowel trouble or drooping wings among its chicks.

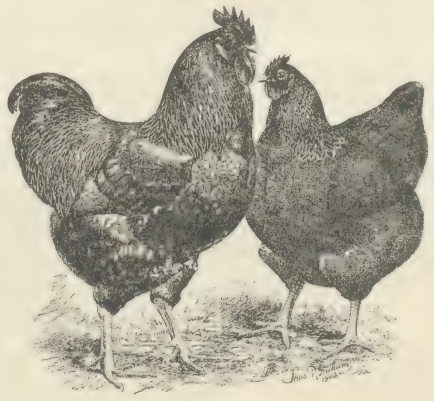
The Champion Incubators lead all.

Send for free catalogue.

J. A. BENNETT & SONS CO.
GOUVERNEUR, NEW YORK

HENS TEETH ARE NOT SCARCE

The question is—What kind to furnish. You can't afford anything cheaper than **Maka-Shel Grit.** Keep it before your fowls, scatter it in the litter. They'll find it. It is white, sharp, clean, uniform in size, free from trash. It's economical because it lasts so long. It keeps its edges and grinding points till dissolved. Contains Lime, Soda, Iron, Magnesium. All these help to build up flesh and bone, and make eggs. **Maka-Shel** supplies what food does not. Send **50c.,** coin or stamps, for 100-lb. bag **now.** Booklet, "Hen Dyspepsia," and sample—**free.**



EDGE HILL SILICA ROCK CO.
Box I, New Brunswick, N. J.

Leonard W. Lott & Co., N. Y.:

Dear Sirs—Your paper is a business getter.

Yours truly,
GEO. F. PRATT.

An Interesting Poultry Plant

ON the Orange Mountain, at West Orange, New Jersey, is situated the Sunnybrook Farm. The land is high, sloping to the southwest, and the yards all being in sod. The colony houses are strung out along the edge of the woodland, the birds being moved from the warm brooder to the cold brooder and so on to the larger colony houses where they stay until taken in for the Fall breeding or for sale.

At this farm the open-front scratching shed style of house is used without glass in any of the buildings except the brooder houses, the houses being built with a single pitched roof, high in front, with large moveable canvas duck curtains, the idea at Sunnybrook Farm being that fresh air makes strong and active birds and increases the egg total. The breeding houses are supplied with non-freezable fountains, the water being kept before the fowls all the time in tepid condition. The little chicks after a day or two are kept on a diet of ground baked bread made from a special recipe by the manager. This has been found in previous seasons to be a splendid forcing and developing food, and last year the death rate was extremely small.

As soon as the chicks can stand the cold brooder house, which is kept at a temperature of 60 degrees, they are moved into it, and from there they get a chance to run on the grass. They are still here kept on the baked bread with a variety of small grains, plenty of grit and lots of clean water before them all the time. The food in the colony house is a sticky paste of mush three times a week with plenty of beef scraps and a mixture of grains, white corn and white meal being used.

Dogs are stationed at convenient points in kennels and pups or kittens are put into the chicken runs and soon become used to the birds and the birds to them, and they prove very valuable in keeping off marauders of all kinds, and scaring away crows and hawks.

The exhibition birds are cooped in long houses raised three feet from the ground and provided with a runway from the floor of the house to the scratching shed underneath. This gives double the floor space and has been found to work very well, especially when the yards are crowded with snow. The birds have constantly before them charcoal, grit and oyster shells with the water kept in these non-freezable fountains, and are fed twice a week on a mash with just enough water to keep it together, and having for its principal ingredients white cornmeal, bran, beef scraps, charcoal, red pepper, etc. Twice a week fresh ground bone is given.

After the breeding season is over the females which are to be kept over for another year are turned into a big house with lots of ventilation and run out into a run of about two acres, bordered at one end with good shade. There they stay until real cold weather or until the mating up is done.

The colony houses are provided with duck curtains. On the back wall is hinged a set of perches six inches from the floor of the house, these perches being fastened up to the back wall when it is necessary to clean the house. The curtains in the colony houses are hinged up to the ceiling all during the summer and in the fall, unless the weather be unusually cold or stormy. Birds hatched in the latter part of May or even the early part of June develop so rapidly under this treatment that they can be shown at the December shows. The laying houses have no board floors and are divided into large pens 20 by 15, 50 to 75 birds being kept in a pen. The floor is constantly kept filled with a heavy layer of scratching material and the feeding is all done in this, except when mashes of ground bone is given. The center of each pen contains a very large non-freezable fountain, accessible to birds at all times, and each pen has a commodious yard and the snow is kept shoveled off these yards as much as possible, so that the birds will have plenty of exercise.

Mr. Chas. D. Cleveland, the proprietor, is very enthusiastic over the laying of his birds, and thinks that it has been materially increased by the fresh air treatment. He has followed out very largely the ideas which have prevailed at the Maine Experiment Station.

The farm has quarters for visitors to stay over night, and it is pleasant to go to the farm in the evening and to watch the men in their round of duties in the morning. Very few of Sunnybrook's chicks are farmed out, and it will have this fall on the place between 2,000 and 3,000 birds.

Green food for the whole winter is raised on the farm, together with some grain and the hay for all the stock. While there is no unusual system of feeding the principle has been to keep the birds active, and always ready for their meal when it comes.

This farm began exhibiting its "White Frost" strain White Wyandottes two years ago and in that season won over forty premiums and cups. Last year Columbian Wyandottes were added and this breed won some important premiums at Jamestown and other exhibitions, including 1st Cockerel at Madison Square Garden. Mr. Cleveland expects to begin the coming exhibition season by showing at Syracuse and will perhaps continue until the Chicago Show.

"Rochellaise"

457 acres devoted to "Faultless" Houdans and imported Island bred "Rochellaise" Jerseys. The world's best in their respective breeds. We challenged all the noted Houdan breeders to meet our fowl at New York and Boston shows this winter. Some of them did not dare to come but we won every first and every second prize against all competitors at those two shows. 400 Houdan hens for sale that will be 2 yrs. old in the Spring. Every hen a pedigreed hen bred from trap-nest records since 1890. Every hen is sold under guarantee to weigh 7 lbs. or over and to be a "Faultless" Houdan, and to produce 5 eggs each week the balance of the Winter.

12 beautiful registered Jersey calves for sale, bred from the best cows the Island could produce.

We breed our Houdans as we breed our Jerseys—from actual test, and to-day, as great layers, they stand first.

Rochelle Manor Farm

Cambridge, New York

Under the ownership of E. F. McAvoy, Jr.

HERE'S A PEN FOR CHICKS AND HEN

It's an ideal place for a hen to sit and raise her brood in a Wigwarm Setting and Brood Coop. Size 20x42 and 20 high. Keeps out rats, skunks, etc. Makes money, saves many chicks. Price $2.50. Move it anywhere. Send today for free catalog.

E. F. HODGSON, Box 54, Dover, Mass.

Indoor brooder house at Sunnybrook Farm. In the fall they take out the brooders and convert the building into a conditioning house, the coops being placed along back wall and the brooder runs used for exercising pens.

IT appears the awarding of specials in Pigmy Pouter alley at the recent Boston Show (club meet) has caused no little comment, and up to the present time many have been withheld.

The list of specials was published in the February 1st issue of the AMERICAN FANCIER and should be authoritative as they were taken from a list made out by the judge and given to us for publication.

We cannot understand why there should be any confusion, providing the birds were judged for these specials and the same properly awarded.

One of the objects of a specialty club is the offering of special prizes but if they cause the trouble such as seen in the Pigmy Club it is better to withdraw them.

Some pretty strong statements have been made concerning members of the club which we hope will be settled peaceably and no feathers lost in the moult.

* * *

In a recent issue of our contemporary, the *Pigeon News,* Mr. Jesse M. Rutter complains about the manipulation publicly advocated and put into practice at the last Boston Show, and further states perhaps the Fantail Club can give a clear ruling on the subject. This is not the first time this question has been before the fanciers, but heretofore has generally been said about the exhibits at the club meet rather than at Boston under a judge who has made statements in the press where he stands on the subject, but one can never tell.

The display of Fantails at the Boston Show this season was unusually fine, especially the winning birds, and well placed as a whole. Just where the manipulation started and ended is beyond the writer, but we do know should any of the specimens which were awarded the coveted prizes been disqualified or even passed on account of faking it would have been beyond the judge and even Mr. Rutter to prove such.

Fantail alley would certainly be a mild and tame place were it not for these arguments which arise after our large exhibitions. The Fantail Club does not uphold faking in any way and has done all in its power to stop it and has succeeded to a great extent. But some have succeeded in breeding truly wonderful birds for both tail and body properties and now they must be robbed of their glory by the worn-out expression "faked."

* * *

We understand Mr. Geo. Feather has sold all his Turbits and intends to retire from the fancy. Mr. Feather has judged at the large shows for a number of years and we hope his retirement is only temporary.

* * *

Mr. A. E. Robst, of Helmet fame, has mated his entire stud and expects to surprise some of the fanciers next season. If he is as successful in producing the ideal as he was in bringing out this variety his efforts will not be in vain.

* * *

The poultry and pigeon fancy of not only Hartford, Conn., but all of New England, has lost a genial and true-hearted friend in the death of Benjamin S. Woodward, who died February 25. Mr. Woodward was 65 years of age, but throughout his active business career had always found time to breed and exhibit some very choice birds, both in pigeons and poultry, and had acted as judge at various shows, going as far east as Portland, Maine. He was a charter member of the old Connecticut State Poultry Society and served as its treasurer many years. At the time of his death he was vice-president of the Hartford Fantail Club, and was its first treasurer. In earlier years Mr. Woodward imported several varieties of poultry; also Runts. He was more intimately acquainted with the older fanciers, such as Philander Williams, of Taunton, Mass.; the late Charles E. Mitchell, of Bristol, and others of their day. Of late years Mr. Woodward had given his attention to Black Breasted Red Game and Birchen Game Bantams and Fantails in various colors. He was a man of sterling character and to know and meet him was a pleasure.

* * *

The voting slips for the election of officers for the American Pigeon Club are now in the hands of the members. The polls close April 4th, 1908. The election is for President, 1st and 2nd Vice-President, three Directors for three years, for two years and for one; also the important office of Secretary and Treasurer. All members in arrears are probably ineligible for election. It is beyond the power of the writer to vote or even any member not knowing who has paid and who has not. The American Pigeon Club is indeed a necessity and should be supported by all pigeon fanciers and be the governing body of the pigeon fancy. This we truly believe. The present office of secretary and treasurer embodies entirely too much work. Not one fancier in a thousand could give it the necessary time to properly attend to its duties, and the compensation is in no way in accordance with the duties. Mr. Whitney has worked hard and faithfully but has not had the support of the majority of the fanciers. In a circular letter which the secretary has sent out he makes an appeal for life members, and although this is a good plan we do not think it will draw a great many under the existing conditions of the club, and if the members would only pay their annual dues promptly it would certainly assist Mr. Whitney. His notice in this paper regarding the incorporating of the club is worthy of attention. We know personally of quite a few fanciers who would not join the club unless it was incorporated, and although it will cost quite an amount, we believe it should be done. We do not know how many members the American Pigeon Club has, but are sure it would only be a trifling amount to each to raise the necessary money to form a corporation.

The band question, which has been an important feature of the club, we should think could be handled in a more satisfactory way if a contract of bands were placed in the hands of a reliable manufacturer and a certain retail price agreed upon whereby the American Pigeon Club would get a commission, as it were, on the total amount of the business. The manufacturer to attend to all orders and all mail regarding the bands.

It seems to us that it is unnecessary to have the ordering and payment of bands made through the secretary of the American Pigeon Club, and if the contract was made, as stated above, we believe it would eliminate much unnecessary work on the part of the office of secretary and treasurer.

Instead of members finding fault with different clauses and rulings in the club, they should express their opinions openly and it would probably have a good effect and the officers could glean many good points from others, and would embody them in the amendments to the constitution and by-laws of the American Pigeon Club.

My Ideal Dragoon

IF it be by no means an easy matter for an experienced and accomplished pigeon artist to portray an ideal Dragon that would be likely to secure anything like the unanimous approval of experienced Dragoon breeders, how much more unlikely would an amateur, unversed in the subtle technicalities of draughtsmanship, or even the rudiments of the art of sketching living birds, be able to satisfy the views of such a consensus of expert opinion?

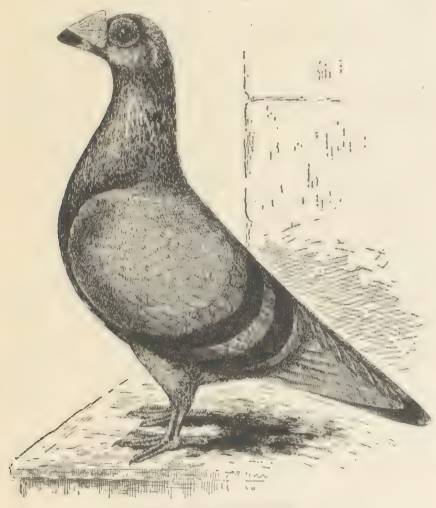
Yet, having been an admirer and breeder of the Dragoon almost from boyhood, I venture to submit an ideal which, according to my views, embodies a rough interpretation of the excellent standard drawn up with such minute care and judgment by the committee of the Dragoon Club in 1902.

Commenting on the profile, and commencing with the skull, which the standard enjoins should "rise gradually from the base of the wattle, forming a gentle and unbroken curve to the back of the head, thence descending to the neck without angularity or lumpiness," I would specially emphasize the last word, and add the word "rapidly" after descending, for many Dragoons, whilst otherwise fulfilling the requirements of the standard, display a most objectionable fulness at the back of the neck, greatly detracting from the style, and, curious to say, some of the highest quality birds possess this defect. The cause of this is difficult to say, but it may be attributable to breeding too assiduously for sweep of skull through the gradient of the curve following that particular formation of skull downward into the neck.

With reference to the beak, both mandibles should be "stout, straight, of proportionate width and of equal substance, close-fitting, smooth, terminating as bluntly as possible, set horizontally in a line with the center of the eye, and measuring from its tip to the center of the eye, about one and five-eighths of an inch; thus making the entire length from the tip of the beak to the back of the skull about 2½ inches"—all of which I have endeavored to depict to the best of my ability.

The wattle should be "peg-shaped, *i.e.,* broad, perpendicular, and highest at the back, narrowing, with equal sides, and in young birds with longitudinal furrows, towards the termination of the upper mandible, and merging almost imperceptibly therewith," or, as it might otherwise be stated, perpendicular and highest at the *back,* narrowing with converging furrows towards the *front,* and there joining the top of the upper mandible at a distance of three-eights of an inch from the tip of the beak, measured horizontally. As with age the wattle breaks and develops into a compact wrinkled formation, these longitudinal furrows mostly disappear, but I prefer them always to remain just discernable, as they not only emphasize the true peg shape, but necessitate the texture of the wattle being small and finely worked. Exception has been taken to the height of the wattle, which is perhaps on the extreme side, but, as I have remarked elsewhere, I am a great admirer of a large, high-set wattle, and I think it will be found that in all large wattled birds, if the head be held quite horizontally, the wattle, unless objectionably flat, will appear above the top of the skull; but, of course, the natural pose of a Dragoon's head is not horizontal, the wattle therefore appearing tilted and somewhat lower. Again, unless a large peg-shaped wattle is set sufficiently high, it will overlap the lower mandible too much and crowd upon the jewing, which is very undesirable; or otherwise, if the wattle be too shallow, it will present a flat wattled and long-faced profile, which is also undesirable, a cobby, short-faced appearance being far preferable, provided the length of the face attains the full standard measurement of 2½ inches. A smaller peg-shaped wattle, as in a yearling cock, may be about level with the skull but a large adult wattle must be set higher to look well. Of course, I am commenting from the horizontal point of view. In cases of large peg-shaped wattles, which do *not* rise above the skull, it will probably be found that these birds do not comply with the requirement of the standard as to the beak being set horizontally in a line with the center of the eye, the beak consequently being set lower, probably in a line with the *bottom* of the eye, hence there is more space for the wattle to develop, but this is not in accordance with the correct standard formation. As for the jewing, which has ever been a source of worry and an eyesore to fanciers, the less there is of this the better; consequently, being an ideal, I have practically ignored it.

The cere should be "small, hard, and finely laced, the inner edge circular, the outer nearly so, but with a slightly 'pinched' appearance at the back. It should not extend above the top of the skull, nor crowd upon the wattle," and I would not have a larger cere than here depicted, although of course with age it will naturally thicken in front and on the top. The inner edge of the cere should retain its circular formation up to maturity.



With reference to the eye, which should be "bold, prominent, and watchful," here I deplore my lack of artistic power, for the eye is manifestly incorrectly drawn; but it is the *size* which I

Black Crested Helmet, 1st, New York, Dec., 1907, Son of the Imported "Bluecher"
Owned by A. E. Robst, Rutherford, N. J.

advocate, for, alas, how very few adult Dragoons can claim to be bold and prominent in eye! nearly all, in my opinion, being too small; and the term "a sweet-headed bird" so frequently heard of recent years would not have been tolerated thirty years ago, when "wicked-eyed rascal" or "perfect demon" was deemed more fitting for the game-cock of the pigeon world. In a word they are too pretty and not fierce enough. I allude, of course, to the barred varieties, for I doubt whether my whole-color friends would be with me on this point.

The neck and body are perhaps on the slim side, and the wings might with advantage be somewhat deeper, but the length of feather, from which I have taken about three-sixteenths of an inch off the original sketch, is now as short as symmetry and Nature's laws would allow. In life I am sure that this bird would not exceed 14½ inches, and would look even shorter if not quite so slim in body.

Mr. H. C. Daniel's Ideal Dragoon.
Redrawn by Mr. Simpson to scale from Mr. Daniel's original pencil drawing.

MR. H. C. DANIEL'S DRAGOON
Redrawn by Mr. Simpson to scale from Mr Daniel's original pencil drawing

The legs and feet are also very coarsely drawn, but the legs should be short and stout, provided—and this is important—the flights and tail are well tucked up.

The carriage of the Dragoon is a very important point, which, at one time much neglected, has of recent years received more attention. It often requires the exercise of much patience to make a Dragoon pose exactly as in the sketch, and unless the bird is correctly built it never will do so. There are also some Dragoons so provokingly tame, or stupid (?), that it is simply impossible to make them stand at "attention" at all, a most annoying fault, and one utterly opposed to the natural characteristics of the breed. How these birds may happen to pose in their own aviaries I know not, but I have often wondered, if a cat were to jump upon their pen, whether they would play up to pussy's front claws with the same zest that they do to my judging stick.

Last, but not least, the color, if a blue, should be a rich, deep blue, "purple blue" the old fanciers termed it, and now exceedingly rare, and quite distinct from the soft, clear, grey tone of most modern blues, which look as if they had silver or grizzle blood in them, and how many fanciers nowadays can positively state that they have not? Broad, well-defined bars are, of course, necessary to complete the ensemble. Add to this a black beak, a blood-red ruby iris, with a dark circle around, and a blue-black cere, with the bloom of a ripe Gros Colman grape upon it, and you have my ideal for what it is worth.—H. C. Daniel in *Feathered World.*

NOTES FROM A PIGEON FARM

Result of 40 years' experience with Pigeons. Most valuable to Fanciers and Squab Raisers. Absolute truth about both sides of Squab raising. Invaluable to beginners. Interesting and instructive to everybody. Entirely different from any other pigeon book. Mailed on receipt of TEN CENTS.

Incorporating The A. P. C.

The matter of incorporating the Pigeon Club has been suggested many times and I have tried to get at the matter several times, but have each time given it up for the reason that it would cost more than I thought the club could stand at that time to get the ideas of the members. I want each of you to give me your views on the matter so that I can go ahead on the matter when the polls close.

Therefore give this matter your earnest attention. I am also pleased to receive any suggestions for the betterment of the club. Here is a chance for each and everyone of you to open his heart and let us have the benefit.

RICHARD WHITNEY,
Secretary.

PIGEONS

SALE OF CHICAGO WINNING SHOW homers. 1st old Cock, 1st young and 3d old Hen at Chicago, and seven others making five pair of the best show Homers ever offered in this country; $50.00 takes the five pair, and they are worth twice the money. OAKVALE YARDS—COLUMBIAN AND Buff Wyandottes; unparelleled record this season at Holyoke, Mass.; Gouverneur, Huevelton, Auburn and Ithaca; winning more firsts than all competitors combined. This demonstrates that our stock have the QUALITY, a reputation they have maintained for the past eight years; eggs, $2.00, $4.00 and $5.00 per 15; circular. E. S. Wilson, South Hammond, New York.

CHAMPION COLUMBIAN WYANDOTTES—Winners of more prizes and Specials at the Great Scranton Show than any competitor; including, 1st Pullet over 1st New York Pullet; almost a clean sweep at Wilkes Barre; also, S. C. White Leghorns; farm raised; eggs and stock for sale; send for mating list. Harry B. Miller, Clark's Summit, Pa. R. F. D.

PARTRIDGE WYANDOTTES. WINnings at Buffalo: 1st, 3d, 4th Pullet; 3d, 4th Hen; 2d Cockerel. Rochester, on five entries: 1st, 2d, 3d Pullet; 1st Pen; 4th Cockerel; specials—best colored and shape female, best pen, best exhibit. Auburn: 1st Pen, 1st, 3d, 4th Pullet; eggs, $3 and $5 per 15. Harry M. Gates, Mt. Morris, N. Y.

SILVER LACED WYANDOTTES FROM America's best. Eggs from Hagerstown, Carlisle, Dallastown, Wilkes-Barre winners. Send for circular and winning list before buying. John Ahl, Carlisle, Pa.

1,200 DUSTAN STRAIN WHITE WYANdottes and Nugget strain Buff Rocks line bred for eight years—for show points and eggs they are fine. Must be as described or birds can be returned and you get your money—you to be the judge. Allen Sechrist, Port Trevorton, Pa.

OUR BUFF WYANDOTTES HAVE WON at some of the largest shows in several states this season, also at the great Montreal, Que. show. 1908 catalogue, the most complete booklet ever published by breeders of this grand variety will be mailed free to any address. C. F. Smithers & Co., Heuvelton, N. Y.

BUFF WYANDOTTES. I WON THIS season 45 ribbons, including eleven 1sts, fourteen 2ds, six specials, at three shows—Riverhead, Mineola, and Richmond Hill. Eggs from matings, exhibition stock, and mated to produce winners. Stock for sale. Bargains in cockerels. Circular free. J. E. Willmarth, Amityville, N. Y.

BUFF WYANDOTTES EXCLUSIVELY—My birds are winners of the blue the past season at Kingston, Little Falls, Utica and Schenectady. Eggs from five grand pens all headed by solid buff males $2.50 per 15, $4.00 per 30. Order early. E. M. Budlong, Frankfort, N. Y.

EGGS FOR HATCHING FROM WYANdottes that are fit to compete in any company; won Silver Cup, blue ribbons, and every Special in a hot class of 108 Wyandottes; ten years a breeder of Whites; eggs, $2.00 per 15; $5.00 per 50. F. C. Hollamby, Weston's Mills, N. Y.

"BUFF WYANDOTTES: HOW TO Breed Good Ones." A breeder's handbook, by Dr. Sanborn. Solid Buff Color fully considered. Points out nedless mistakes. Timely hints on mating for show stock. Fresh from the press, postpaid, for twenty-five cents, silver or Money Order. Dr. N. W. Sanborn, Box, 866, Bellingham, Mass.

WHITE WYANDOTTES, DUSTON STRAIN—Scoring to 93¼ by Webb; Cockerels and Trios for sale; 15 eggs, $1.00; 30, $1.50. Top Notch Poultry Yards, Portville, N. Y.

BUFF WYANDOTTES. WINNERS AT Madison Square Garden, Auburn, Rochester, Schenectady, Johnstown, N. Y. and New York State Fair and many other shows; stock and eggs for sale in season. J. H. Scott, Auburn, N. Y. R. F. D., No. 9.

COLUMBIAN WYANDOTTES. I WON at Elmira, N. Y., Jan., 1908, in strong competition, 1st and 3d Cks., 2d and 4th Hens, 1st Pullet and 2d Pen; eggs from 5 choice pens; send for mating list; a few good utility Ckls. at $3 each. E. D. Pierson, Box 22, Addison, N. Y.

BUFF WYANDOTTE COCKERELS AT half their value to immediate buyers; sired by 1st Cockerel at Pittsburg and 2d Cock at Buffalo; eggs from two grand pens that will produce you winners at $2 per 13; $5 per 45; order at once. B. L. Waite, West Valley, N. Y.

COLUMBIAN WYANDOTTES—EGGS, $3 per $15; pens contain the following winners: 1st pen (young), 2d Cockerel, 1907; 1 Cock, 1908, Bradford, Pa.; 1st Cock, 1st and 2d Hen, 2d Pullet, 1 pen (old), 1908, Hornell; old birds hatched from $20 setting eggs. Fred A. Burdett, Route 3, Hornell, N. Y.

WHITE WYANDOTTES, WINNERS OF three regular prizes and three specials, under Drevenstedt at Gouverneur Poultry Show, Dec. 17—20 scoring to 93; our stock is the low, down blocky type and snow white. eggs, $1.50 per 13; elegant illustrated catalogue, free; pictures from life. Bay Shore Farm, Gouverneur, N. Y.

CHERRY GROVE FARM, M. R. JACOBUS, Prop., Ridgefield, N. J. Compelled to sell out my grand stock of Buff Wyandottes to make room for Dorkings, Campines and Hamburgs. Cocks and Cockerels, $3 to $8; females, $3 to $5; pens, $15 to $25; according to quality; sent on approval; rare chance.

COLUMBIAN AND WHITE WYANDOTTES. Won at Kingston Show, 1907, Columbian, 1st Hen, 1st Cockerel and 1st Pullet; Whites, 2d Cockerel and 1st Pullet; eggs, Columbian, $3 per 15; White, $2 per 15. Geo. Suiter, Marlboro, N. Y.

BUFF WYANDOTTES EXCLUSIVELY. My winnings this season prove the quality of my stock. State Club Cup at Rochester for the best Cock, Hen, Cockerel and Pullet. On 24 entries at Rochester, Corfu, N. Y., Cleveland, Ohio, I won 20 regular and 17 special premiums, including 5 color and 3 shape specials; stock for sale at all times; eggs in season at $2, $3, and $5 per 15; satisfaction guaranteed. C. W. Augenstein, 99 Weldon St., Rochester, N. Y.

COLUMBIAN WYANDOTTES—SUPERB in quality; winners in the showroom as well as layers; yards headed by 1st Port Huron, 2d Detroit and 2d Jackson Cockerels and sons of "Teddy;" Hens from Arnold and Richardson; eggs, $2; circular; satisfaction guaranteed; if you want the best write Wm. D. Seidel, Washingtonville, Pa.

WHITE WYANDOTTES, "DUSTON'S Strain." They have won prizes at Olean, Canisteo, Salamanca and Bradford. My stock scores 95¼. Eggs from the best pens $2.00 per 15. Cheaper eggs if you want them. Eight chicks guaranteed or order duplicated at half price. Geo. Mohr, Olean, N. Y.

WHITE WYANDOTTES—I WILL SEND you 15 eggs for $1.50 from my choicest pens of birds. Score 94½ points. The remainder of my flock which are fine utility birds. $1.00 for 15. Jos. S. Ludington, Patterson, N. Y.

SANBORN STRAIN BUFF WYANDOTTES. At Rochester, 1908, 1st Pen 2 years in succession; 1st and 4th Pullet and 4th Hen. All stock bred from prize winners, of rich, even color; the laying kind. Settings from $2.00 up. Cockerel for sale. Charles Pearson, Geneseo, N. Y.

When fowls are judiciously fed, made to take exercise, and their quarters kept clean and free from lice, there is comparatively no trouble with sickness, except in cases of contagion.

SOMETHING NEW!

The Poultryman's Formulary

By DR. PRINCE T. WOODS

A Collection of One Hundred and Thirty-Three Valuable Recipes Worth Several Hundred Dollars

American Polish Club

The annual meeting of the American Polish Club was held in conjunction with the Meriden Poultry Association's annual exhibition, at Meriden, Conn., and was a great success. The quantity and quality of the birds shown was the greatest in the history of the organization, representatives of all the different breeds being on exhibition. President Seely presided at the meeting, the event of which was the visit of the Hon. Thos. L. Reilly, Mayor of Meriden, who made a speech of welcome and congratulation. A club emblem was arranged for.

It was voted to hold the next annual meeting at Boston during the Boston show, season 1908-09.

The club catalogue for 1908 is now ready for distribution, and will be mailed to anyone interested upon receipt of a two cent stamp sent to M. V. Caldwell, Secretary-Treasurer, American Polish Club, Route No. 5, Lisbon, Ohio.

[Ed. That the Polish Fowl is attracting much attention at the present time is shown by the increased number of members in this club, which is double the number of last year.]

VIRGINIA HOMES

IF you are looking for an even climate, no extremes, long pleasant summers, never a prostration or a sunstroke; short and mild winters, either to do successful general farming or raise all kinds of fruits, berries, garden truck, poultry, peanuts and cotton, so to say, the largest variety of crops profitably, or for a change to recuperate from long, cold winters and regain health, send 10c. for a six months' subscription to the

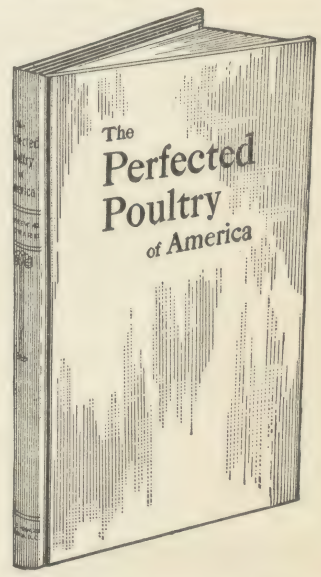
THIS PICTURE FOR YOU!



I want everybody that receives a copy of this paper to get one of these beautiful pictures of the ROOSEVELT FAMILY. This picture deserves the most prominent place in any home. It is 18x24 inches in size. Beautifully produced in TWELVE COLORS on extra heavy paper in LITHO OIL finish. I want to impress on you that this is not one of the cheap kind of pictures so often sold through the mails. When you get the picture you will agree with me, that it is the FINEST PICTURE ever offered by a publisher. HOW YOU CAN GET IT. I will send you this picture absolutely free, if you will send me 25 cents for a years subscription to the BADGER. The regular subscription price of the BADGER is 50 cents a year, but I want you to get this beautiful picture therefore make a special yearly subscription offer of 25 cents with the beautiful "Roosevelt Family" picture. DARLING'S Chick Feed does not work miracles. We don't make wild or exorbitant claims for it. It is simply a chick food composed of the ingredients little chicks require, properly balanced, clean and reduced to the right degree of fineness. There is no waste. Chicks eat it all and digest it all. Because they digest it all, they escape bowel trouble and the whole train of little chick complaints that take them off by thousands. It is the best chick feed because it produces best results. It makes healthy chicks and makes them grow.

If Darling's Chick Feed were not all it is claimed to be, the knowing ones would have found it out long ago and ceased to use it.

All Darling Foods are of the same high character. No by-products from breakfast food factories, no mill sweepings. They are prepared originally and solely for poultry feeding—all the nutriment of the grains, the best that can be procured.

We are prompt shippers. Send along your order, directing to nearest office.

Our fine catalog on Foods and Poultry Supplies and our admirable little book, **"Fill the Egg Basket,"** are free. Ask for them.

The American Fancier

VOL. XXVIII NEW YORK CITY, APRIL 1, 1908. No. 700

The Dorking

By Henry Hales

President American Dorking Club.

THE fowls described by ancient Roman writers as their favorites, closely describes the Dorkings, not known by their present name, until introduced by the Romans into Britain, on their way to London, which was then a British town. They had supplies which followed their camps, and so the poultry was introduced in the counties of Sussex and Surrey, and have been known there ever since. The village of Dorking gave the name to the fowls, as that seems to have been a point for gathering fowls for the London market, and where the highest perfection of the fowls were selected and bred. It is not worth going into minute evidence in this short article, it has been done so many times before, with dates, names, etc. We accept the fowls as they *are,* the first variety of domestic poultry ever described. Only the color has gone under much change, principally by the gray, which are bred more distinctly silvery and now called silver-gray.

No wonder that fowls of such a splendid type should have been a favorite; it has maintained its worth ever since, it adorns the lawns of many a noble ancestral estate. In England a number of titled ladies who love fine stock, breed and exhibit Dorkings in all the principal shows. Last year an earl of an ancient family, judged the Dorkings at one of England's largest shows. There is no wonder that they are attractive, their size, richness of color, noble form, large flowing tail, head crowned with an appropriate sized comb, give all the points in full of a finished picture by nature.

* * *

Regarding the care, management, selection and matings, Alan Tweedale, in the *Feathered World,* says:

"In all colors of Dorkings the breeder starts with the great advantage of being able to produce good exhibition specimens of both sexes from one breeding pen, although it is only natural that some birds are better suited for breeding one sex than another.

In mating up a breeding pen of Dorkings we turn first to the lord of the harem. He should be an exhibition cock of his own particular variety, with all the points of type and color set forth in earlier chapters. Notice his comb, which should be a healthy red, well erect, and firmly set on. The comb should be well serrated, and if a little smaller than usual, all the better. An enormous headgear often renders the cocks unfertile, and dubbing is then the only remedy. Be particular about comb, as the cock has great influence on this point. The cock may be a little less in size than usual, provided he has been breed from a large hen. He must be a bold, agile bird, in full health and fairly young. The old proverb, 'Never keep a cock or a servant more than a year,' well applies to Dorkings; few Dorking cocks are useful for breeding after two years. Choose a cock that has been very little exhibited, and if you can get one that has been running in the sun, and has yet kept his plumage untanned, get hold of him, by fair means if possible—but get hold of him.

"A big, bold cockerel, unspoilt by showing, and fed naturally, makes the best breeder of all. An old stock cock is very unreliable as a breeder, although there are, of course, exceptions.

"For such a bird we want a nice little harem. Mate him to five or six hens, adding more if necessary. Cocks differ, and some require more mates than others. If the hens are losing feathers on their backs, and seem to try to avoid the male bird, it is generally wise to add another hen or two. Get hold of as good hens as possible; pick them from an old strain, and be particular in seeing they are large and fine. A cockerel should be mated to two-year-old hens, a cock to pullets.

But not everyone possesses perfect birds. In mating up a breeding pen it should be remembered that no fault which is present in the hens should be also present in the cocks, and *vice versa.* A Dorking hen may have a small erect comb, still, she will probably breed very good headed cockerels, but unless you mate her with a large combed cock, her female progeny will also be small combed. If the cock is inclined to carry his tail too high, choose mates with low-carried tails.

"A silver-grey or dark cock with a mottled breast will often produce good pullets, though generally rather too pale in breast color, while the cockerels will be like their sire. A silver-grey hen with rusty or red colored wings will often produce excellent silver cockerels, and it is the same with the dark variety.

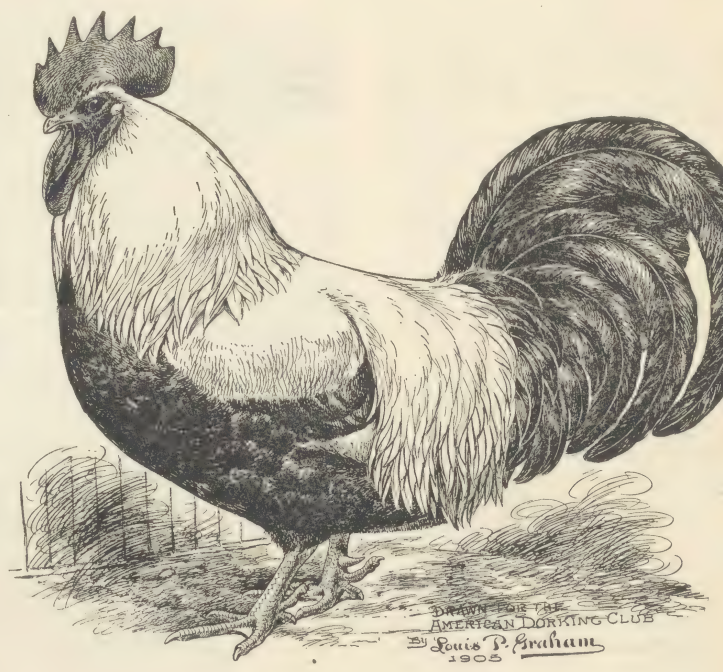
"Size is most important on the female side, type and color on the male. Laying qualities generally follow the female side. Do not mate up any birds with imperfectly-formed feet, you will be losing ground if you do, and be very careful about introducing fresh blood when your strain is once formed.

"In whites purity of color is essential; if great size is desired a cross of dark rosecombs will give cuckoos, and these mated back to their white parents will give a great increase in size. The experiment has been successfully tried; but the gain in size was not kept up, the largest birds being by no means the most profitable. Anyone finding a difficulty in procuring cuckoos should experiment with the above cross.

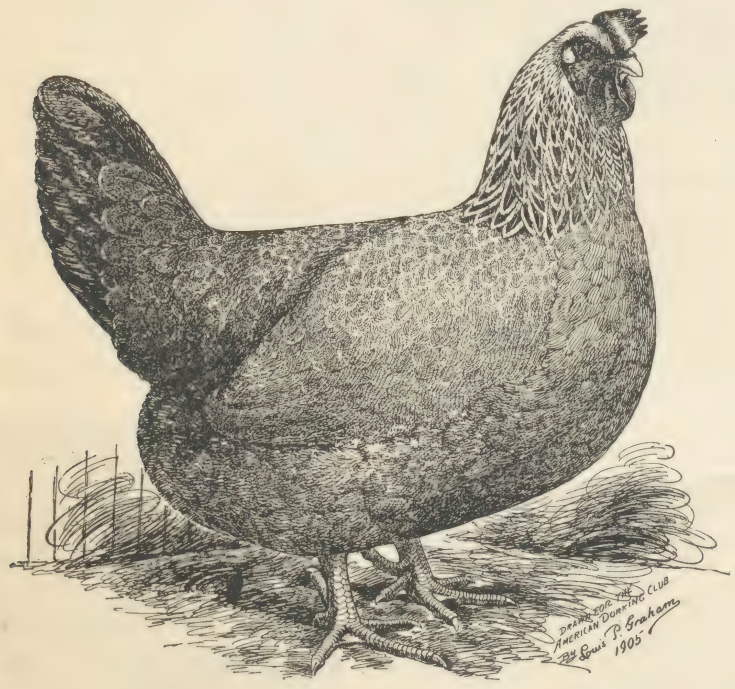
"Reds are still very small, and at present in very few hands. A partridge Cochin cross might bring them up in size and popularity to their dark and silver-grey brethren, but would take years of trouble and hard work. As they are at present—except for their small size—they are typical Dorkings, and excellent table fowl.

"Points that want attention at present in breeding are breadth of back and prominence of breast, while many birds are far too loosely feathered. A protest should be made against the exorbitant increase in size of the combs, especially in the dark variety. To such a heavy breed as the Dorkings a monstrous comb is neither sightly nor useful, and, besides, greatly depreciates the value of the cocks for breeding purposes.

"The best way to lift a Dorking off the nest is as follows: Place both hands firmly over her wings, and lift them up gently. After making sure that no eggs are left under them, press the wings to the body, and then, sliding the hands a little lower under her body, gently raise the hen from the nest.



If left to herself, which can quite safely be done, sufficient food and water should be placed near at hand, where she can help herself. A dust bath should be provided, and before setting the hen she should have a good dusting with insect powder.



"In due course the downy mites appear. A good plan to follow at this juncture is to make up a nest in one of the exhibition pens and to transfer the hen and her brood thereto. Then place the pen on a broad shelf, and hen and chickens will be safe from any wandering vermin. A little chopped hard-boiled egg and chicken meal should be given them every two or three hours at first, with some dry chick feed for the last meal of the day. Then the first fine day afterwards coop them out.

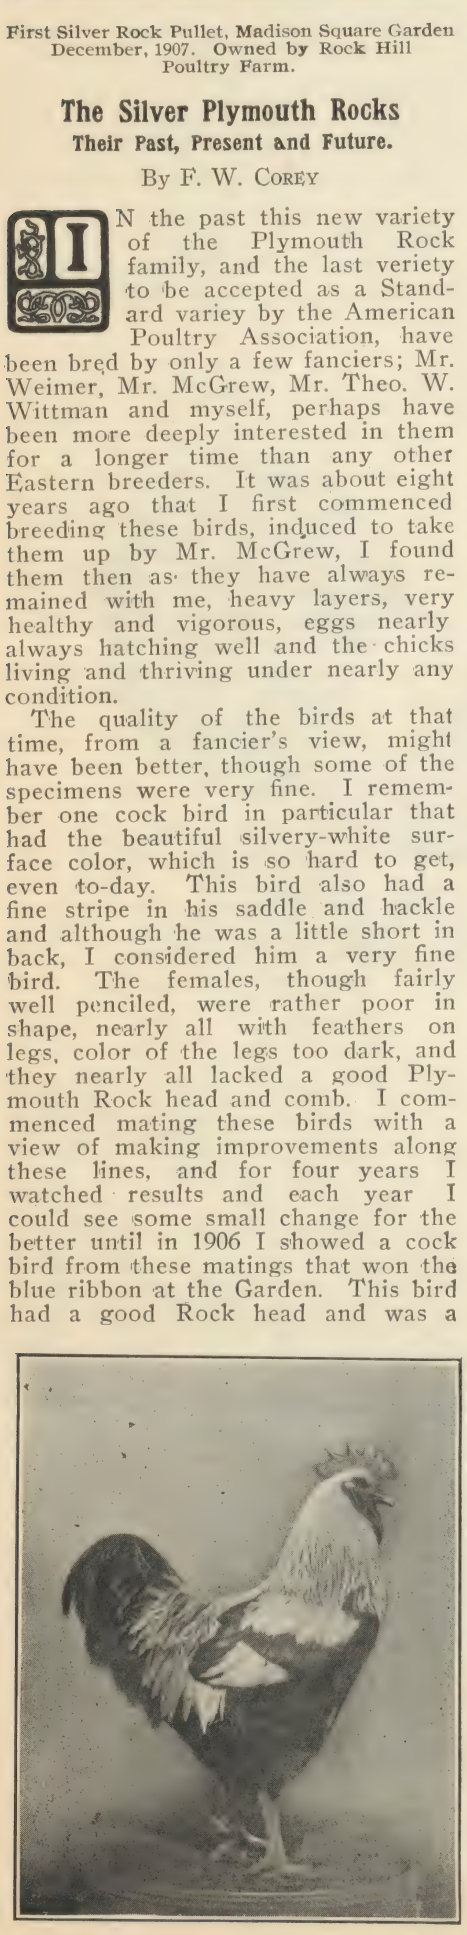
"Dorking chicks feather exceedingly early, so that a very sharp look out for insect vermin should be kept. The plumage is so profuse at a quite early stage that cover is afforded for lice while the chicks are still weak and fragile. Thousands of Dorking chicks fall a prey to insect vermin each year, so let the reader take warning. If the chicks hang about the coop in a depressed fashion, it is time to act promptly with insect powder, and to stamp the pests thoroughly out.

"A good menu is biscuit meal with a little oatmeal and the small seeds and grains sold as dry chick foods. These should be alternated throughout the day, and the chicks should be allowed a little wheat for the last feed of the day after they are a fortnight old. No water need be given to the chicks if they are cooped on the grass, unless soft food is withheld and the dry food alone given. A little milk now and again does a great deal of good.

"Under this treatment the chickens are soon grown enough to leave the hen. Then separate the sexes, give as good runs as possible, and plenty of oatmeal, biscuit meal mixed with any of the ordinary meals, and good sound wheat. Add a little bonemeal if leg weakness is feared in the cockerels, or give twice a week a little Parrish's chemical food. Three meals a day are a sufficient number at this stage."

First Silver Rock Pullet, Madison Square Garden December, 1907. Owned by Rock Hill Poultry Farm.

The Silver Plymouth Rocks



Their Past, Present and Future.

By F. W. Corey

IN the past this new variety of the Plymouth Rock family, and the last veriety to be accepted as a Standard variey by the American Poultry Association, have been bred by only a few fanciers; Mr. Weimer, Mr. McGrew, Mr. Theo. W. Wittman and myself, perhaps have been more deeply interested in them for a longer time than any other Eastern breeders. It was about eight years ago that I first commenced breeding these birds, induced to take them up by Mr. McGrew, I found them then as they have always remained with me, heavy layers, very healthy and vigorous, eggs nearly always hatching well and the chicks living and thriving under nearly any condition.

The quality of the birds at that time, from a fancier's view, might have been better, though some of the specimens were very fine. I remember one cock bird in particular that had the beautiful silvery-white surface color, which is so hard to get, even to-day. This bird also had a fine stripe in his saddle and hackle and although he was a little short in back, I considered him a very fine bird. The females, though fairly well penciled, were rather poor in shape, nearly all with feathers on legs, color of the legs too dark, and they nearly all lacked a good Plymouth Rock head and comb. I commenced mating these birds with a view of making improvements along these lines, and for four years I watched results and each year I could see some small change for the better until in 1906 I showed a cock bird from these matings that won the blue ribbon at the Garden. This bird had a good Rock head and was a fairly good type, and I was very much pleased with the results of the three years mating before I produced this bird.

Just before the show at Madison Square in 1906 and upon coming to Rock Hill Poultry Farm, I had purchased what I think was the finest flock of Silver Rocks, ever got together in America, about eighty birds, bred from a silver-grey dorkin, dark brahma and mottled Java cross; every one of this flock of birds had size, beautiful color, most of them were good in Plymouth Rock type and fairly good in heads and combs, but above every thing else they had size and health and vigor stamped all over them. I still had some feathers on shanks to contend with and I mated these birds very carefully, in 1906, with the view of getting rid of those, throwing out many fine birds from our breeding pens in my effort to correct this defect; also, I selected females that had the best color in the leg and I was glad to notice that when the chicks hatched that I had made considerable progress in these to points and as they developed, I saw some very fine Plymouth Rock heads and combs. Our 1907 matings were made after carefully studying the results of 1906, and I will say, that we were again successful with the majority in producing chicks that were good in Plymouth Rock type, in head points, and greatly improved in color of legs and practically free from feathers on shanks, some matings hatching less than 2½% of chicks showing any stubs.

Champion Silver Rock Cock. Winner of 11 Blue Ribbons, 3 at Madison Square Garden. Owned by Rock Hill Poultry Farm.

BREEDING YARD NUMBER EIGHTEEN

Showing the Silver Rock Females. Every bird in this Yard is a winner at Madison Square Garden. Owned by Rock Hill Poultry Farm, Ossining, New York.

The Silver Rocks of the present day have reached that point where they are breeding as true as many of the older Standard Varieties and are attracting the attention of the poultry men and fanciers in all parts of our country as well as foreign countries; and why should they not? If you will glance at the illustration in connection with this article you cannot fail to notice the beautiful markings of these birds, and to all lovers of a colored fowl they are bound to appeal.

They not alone have beautiful plumage to recommend them, but, as I have said before, they are heavy layers, winter and summer, and best of all, are a very healthy, hardy and vigorous bird.

We have shipped Silver Rocks to over ten different States during the past three months and the most of these were purchased by people that have been attracted by their beautiful color and who are deeply interested in them even to the extent of paying good prices for good stock to get the right start.

The future of these birds, having bred them for eight years and knowing their many sterling qualities, seems to me to be very promising. When once a poultry man has tried them, he is sure to be pleased with results, and as we get them introduced in different parts of the country, their reputation spreads and like making money, though slow at first, after you get a start, it comes with a rush (to some), I feel it will be that way with the Silver Rocks. A few are trying them and others will hear of the good results and want them for themselves.

A Silver Rock Club was formed during the Madison Square show in December, by a few enthusiastic fanciers and friends of the variety, and as all speciality clubs are organized to help their different breeds and varieties, so ours will help to introduce the Silver Rocks, and with all things in our favor, I feel sure these beautiful birds will climb towards the top of the list as one of the most popular of the colored varieties of fowls.

* * *

Photography and the Fancier.

Written for The American Fancier *by* A. E. Robst.

Photography should be practiced by all fanciers, it is instructive and superior to any ideal drawing made by artists who but immitate nature, while photography is the real thing, every fancier should own a camera, however modest and make his own pictures. The real fancier always has birds worth photographing, and most fanciers possess several who have won prizes at one show or other, the kind to be photographed. To employ a photographer is costly and generally unsatisfactory, unless per chance he be a pigeon fancier who knows what the natural or ideal should be, still he will be at a loss as even he will be unfamiliar with most of the varieties being familiar with the kind he keeps. It is obvious that you yourself, knowing the ideal, the good points of your birds, should photograph them when at their best, when in condition, selecting the best bird at the right time and not so many, for so much a dozen, and it requires but a little patience and practice to do the trick.

A most suitable device to photograph a single bird or a small number, can be prepared for a very slight cost and will save you considerable time and give better results, viz. Build a wedge-shape cage, five or six feet long, the bottom of ordinary boards, the rear, or background of any material, differently colored than your birds, the top and sides of wire mesh to admit all the light possible; provide a door at side, conveniently, so that you may reach any part of the cage. Place an inverted nest bowl at the rear and put your pigeon in the cage. It will at once sit on the bowl, it being the natural tendency to get as high as possible. This will simplify your focussing, having your bird at the proper point, you can adjust your camera at the end of the cage and abide your time, holding the bulb in one hand and a stick in the other to coax him into the proper position. When you have made your exposure, develope the plate, make a print (all pleasure to the photographer), you will begin to study, both your photography and your birds, and both will be interesting.

* * *

Early in the summer, take out the old hens that do nothing but eat, before they begin to moult, and sell them. This will give the early pullets and yearling hens a better opportunity, and they are the ones that will produce your winter eggs.

Cleveland Show

By JAMES GLASGOW

THE third annual show of the Cleveland Fanciers Club, recently held in Gray's Armory, Cleveland, Ohio, went down in history, as the largest and most successful exhibition ever held in the Middle West. Combining as it did, over fifteen hundred entries in the poultry classes, nearly four hundred pigeons, three hundred dogs and a fine display of cats and Shetland ponies.

Before half the exhibits were staged, it was plain to every one, that the hall was totally inadequate to hold them all.

Pairing up birds had to be resorted to, which caused no little confusion for a while.

But the energetic management went about their task in a systematic way and every thing was ready for the judges to commence at the proper time.

The support extended to this show by the many fanciers throughout the country, has convinced the management that they have to provide more spacious quarters. We understand they have engaged a hall, capable of holding any number of birds, with a single tier cooping arrangement.

Having to climb a six foot ladder to judge the birds, was not figured in, when the judges quoted lowest terms, etc.

Too much praise cannot be given to the officials, and with the able assistance of McWemple, every thing went on like clock work. All prize money was paid in gold, the last night of the show, a fact which speaks for itself, and the men behind the guns.

BARRED ROCKS (COCKS), 13). Some very good birds in this class; winners were full of quality.

HENS (13). A very even lot all through.

COCKERELS (25.) As good a class as you will see anywhere; several good ones unplaced.

PULLETS (14). This class contained some grand shaped birds; very even color.

WHITE ROCKS (Cocks, 3). Nothing startling among them.

WHITE ROCK (Hens, 8). Winners stand out from rest of the class.

WHITE ROCK (Cockerels, 13). First suits us, 2d, close up; plenty of quality here.

WHITE ROCK (Pullets, 16). This lot kept the judge guessing for awhile; the first three were very close.

BUFF ROCKS (Cocks, 7). First and second stood by themselves.

BUFF ROCKS (Hens, 11). First wins well; 2d, a good hen; others well placed.

BUFF ROCKS (Cockerels, 14). First, all-'round good bird; 3d, we liked over 2d; others fair.

BUFF ROCKS (Pullets, 16). First, second, third and fourth, same owner; very little to choose between them.

PARTRIDGE PLYMOUTH ROCKS (4). Birds of fair quality.

SILVER LACED WYANDOTTES. Small classes, but full of quality.

GOLDEN WANDOTTES—Only six birds all told; quality only fair.

WHITE WYANDOTTES. 10 cocks, 15 hens, 17 ckls., 16 pullets; competition very keen; one owner cleaned the decks with a fine exhibit.

BUFF WYANDOTTES. 5 cocks, 7 hens, 9 ckls., 11 pullets. These classes called for an extra effort on the Judges part, as the winners were very close, and birds fit to win anywhere were shown.

BLACK WYANDOTTES. 4 cocks, 6 hens, 4 ckls., 7 pullets. These birds are certainly coming; the 4th prize ckl. was as fine a shape Wyandotte as the writer ever saw, lost on white in under color.

PARTRIDGE WYANDOTTES. 6 cocks, 7 hens, 6 ckls., 8 pullets; some grand birds among them. Hinz's entries stood out a little ahead of the others, with their fine condition.

SILVER PENCILED WYANDOTTES (14 in all); small classes, but quality to burn.

COLUMBIAN WYANDOTTES. 14 cocks, 14 hens, 14 ckls., 14 pullets. Eugene Sites cleaned up three firsts in these classes with typical specimens; the 1st pullet had little to recommend her, outside of her color.

SINGLE COMB RHODE ISLAND REDS (50). In single classes, with the exception of two or three of the winners, they were a very ordinary lot.

The same may be said of the Rose Combs, in our opinion, they lacked type all the way through.

LIGHT BRAHMAS. 4 cocks, 11 hens, 3 ckls., 5 pullets; small classes, with a few good ones amongst the winners.

BUFF COCHINS and WHITE COCHINS (10). Seem to belong to the has-beens; only one exhibitor.

BLACK COCHINS (2). Only fair.

BLACK LANGSHANS (10). Winners had plenty of quality.

S. C. BROWN LEGHORNS. 6 cocks, 7 hens, 6 ckls., 8 pullets; competition keen, no deck-sweeping in this alley.

S. C. WHITE LEGHORNS. 6 cocks, 10 hens, 8 ckls., 10 pullets; several in these classes, were very good, although the majority were dirty, caused by the soft coal used there.

This applies to all the White breeds shown, an expert washer, had a little on the other fellow every time.

R. C. LEGHORNS, S. C. BUFF LEGHORNS, R. C. B. LEGHORNS and SILVER DUCK LEGHORNS, were all small classes, with birds of individual merit cropping out here and there.

S. C. BLACK MINORCAS. Considering this was the meet of the club, the number of entries, were rather disappointing, but the quality was away above par. It was the intention of the club to make this meet, one of the largest on record, as it was, they were second in number of entries at this show.

COCKS (11). First and third, Hilldorfer, one of the best going; 3d, another good one; great size; 2d and 4th, two grand cocks.

HENS (24). First, Sauer; grand body and comb, great color; bred by owner of 2d Hilldorfer, another rattling good hen of same type as winner; 3d, Faulds, close up; 4-5, fine birds.

COCKERELS (16). First, Hilldorfer, a bird that leaves very little to be desired, very upright bird, grand color and shape, best of combs; might be a little cleaner in face to suit some; this bird was named (Duplicate) during the show; 2d, Faulds; another rangy fellow of quality; several in this class, were woefully out of condition.

PULLETS (24). 1st, Faulds; a nice bird all over; 2d, Moore; another good one; 3d, Hilldorfer; hard to find fault with.

Owing to the management having doubled up in many classes, when it came to these long bodied birds, the pens were entirely too small, and judging made very difficult.

R. C. BLACK MINORCAS. Classes not large, but of good quality.

WHITE MINORCAS, SPANISH, AND LUSIANS, ANCONAS and RED CAPS. The same.

S. C. BUFF ORPINGTONS (Club Meet).

Special note should be made of this remarkable turnout of so popular a variety. The old maxim of (in unity there is strength), was never better exemplified than here. Nineteen cocks, 46 hens, 35 ckls., 50 pullets and 10 breeding pens, a total of 200 S. C. Buff Orpingtons in one show. The leading yards of the country were represented. Our friend Delano, of Owens' Farms, tucked away three out of the four firsts, for future notice.

Birds of special notice, were the 1st cock; grand, even color, all the way through, good bone, and an Orpington all over; 1st hen was a gem of the first water, and well deserved her place; 1st ckl. stood in a class by himself and how he lost the shape special is a mystery to me; 1-2-3 pullets were fine in every way. One exhibitor in these classes, showed some fine birds, but over half of them were thrown out for stubs.

S. C. BLACK and WHITE ORPINGTONS—Classes were teeming with good one, and Judge Stanchfield deserves great credit for the way in which he handled the classes.

In the Hamburg classes, the entries were small, but birds of note, here and there among them.

BLACK BREASTED GAMES—Only a few, but very good quality.

WATERFOWL of every description were on exhibition, and the display of Turkeys, Pea Fowl and Guineas left nothing to be desired.

BANTAMS, taken as a whole, were a very ordinary lot, the Sebrights and Black Rose Combs standings out ahead of the rest.

Published by

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

THE Silver Grey Dorking Cock, illustrated on the title page, represents the bird which took the Challenge Cup at Boston in 1905, winning this trophy outright. Last January, a direct descendant of his captured the American Dorking Challenge Cup for the first time. Also the Challenge Cup for the best Male Silver Dorking.

The Dorking is a variety which is fast coming into popularity in this country. For years past it has been one of the foremost breeds of England, where it is highly prized, both as an exhibition and utility bird.

During the last year or so, the American Dorking Club has exerted every effort in bringing this variety to the fore.

As this variety is creating quite some comment, we are publishing on another page, in this issue, an article by an English authority, and notes from the president of the American Dorking Club, Mr. Henry Hales, Ridgewood, New Jersey, who is the owner of the bird represented on the title page.

* * *

Mr. L. L. Bright, Scranton, Pa., informs us that the winning Columbian Wyandotte pullet at Madison Square Garden was not shown at Scranton. This deprives certain exhibitors of the honor they thought they had of winning over this pullet. It has been claimed that the New York pullet was beaten at Scranton. To correct this wrong impression, we publish the foregoing.

* * *

DEAR EDITOR:

My attention has been called to an article written by Mr. M. Ballou in which he takes exception to my review and criticism written for THE AMERICAN FANCIER on his judging of Game Bantams at Boston. After perusing its contents I feel that a reply is due him.

Now, friend Ballou, you wish to know at length, why I prefer the 2d prize pyle cock to the 1st. These two birds are, I believe, brothers, both bred from a light pyle female and a Black-Red male. In comparing them they are very close, both being exceptionately good birds. In size, the 1st bird was the largest, which of course, gave him the appearance of having more reach and length, all around.

In regard to length of wings, would say that the 2d cock has the shortest wings and neatest stern that I ever saw on a game bantam.

Now, it has always been a point with me, when I come across two birds of very even merit and have to decide which is the best to bring into play my knowledge, gained after (many years of breeding and handling of Games and Game Bantams), viz., the giving preference to the bird that had the points most difficult to breed. The 1st cock was what fanciers term (dirty in his white) plainly showing the Black-Red cross, and consequently, worthless as a breeder for producing the creamy white demanded by the Standard in Pyles. The 2d cock was as clean as a whistle, and had a breast like a cockerel, free from sootiness in any way. Now, my dear sir, if you will look back over your twenty-five years of handling and judging you will most certainly agree with me, that sound body color in a Pyle has to be appreciated when found, in combination with other good qualities.

In regard to the exception you take to my report of the pullets, would say that there was not quality enough to make room for argument, as it is just a matter of opinion which bird is the best.

From the tone of your letter, one would be led to think that I was taking exception to you and your ability, rather than the birds.

When writing up the classes, I criticise the same as if they were all running in my own yards, without thought to who owned them or judged them. I regret not having met you at Boston, as there were several of your awards that would have given me great pleasure to have compared notes with you on. I trust this lengthy explanation will help to back up my judgment a little, with apologies to the Editor for the space used,

I am, yours truly,

JAMES GLASGOW.

* * *

Dr. A. T. Sitterly called at the office the other day and told us that undoubtedly the next Schenectady show will be held in the Armory. The State law prevents the use of the Armory for exhibition purposes, but will undoubtedly be overcome by holding this exhibition under the auspices of one of the companies.

* * *

The poultry plant and farm of the late A. A. Parker is for sale. For quite a few years this was the home of the great string of Bantams owned by Mr. Parker, who was highly respected and well-known throughout America as the Bantam Specialist.

Letter from H. P. Rankin.

HARINGTON, Neb., Feb. 22, 1908.

DEAR SIR:

I have asked the printers to mail you a copy of the National White Wyandotte Club Catalogue, and it should have reached you by this time. You will note by the statements in club's finance, that Mr. Hallock expended the $500 that was voted to be put aside for specials, also $127 that was paid to him for advertising in the 1908 Club Catlaogue and $203 of the 1908 dues.

Note particularly the postage bill of $934.67. Mr. Hallock claimed that he got out 15,000 catalogues for 1907. Can such a catalogue be duplicated anywhere? — 15,000 for $600 (144 pages and cover). I failed to get a better quotation from the same printers which put it out, on 5,000 copies only. Also note the cup bill, and yet there were some who were entitled to cups won, who still have them coming.

Mr. Hallock told me at Niagara Falls last summer when he asked me to take the Secretary-Treasurership, that there was around $300 and $400 in the treasury, but that he had a few outstanding debts. I put the question to him again when I got home and he then said, "less than $100," but the books and his statement, when turned over to me on Oct. 5th, 1907, showed the club indebted to him to the amount of $359.79.

In his letter received with statement, he said, "I will gladly donate this to the club, provided you will keep it 'quiet' between *you and myself.*" It has not been made public thus far for the sake of the club and the variety, even when President Graves suggested that I should make it known; and I also advised President Graves not to mention it in his annual message for the Catalogue when he suggested doing so. President Graves and myself have been severely criticised on account of its effect on the club, but I was determined to get out a good catalogue and put the club into a good healthy financial condition, in which I now have it, before making it known, and I believe the club members and all who have the best interests of Standard Bred poultry at heart will appreciate my efforts.

What hurts me more than all else, is that Mr. Hallock was so thoroughly trusted by me, and I considered him one of the best friends I had in the poultry world. However, I could not countenance such an act from my own brother, and I believe it just and right that the public, and especially those who are conscientiously interested in the prosperity and further advancement of our great poultry industry in America should know the truth.

I am not aware as to just how much Mr. Hallock has done for our great cause as Secretary-Treasurer of the A. P. A. I do know, however, that he has great executive ability, but *is a man of such principles safe,* and *can the American Poultry Association afford to trust its finances with him?*

Every member should think seriously on this matter, for much of the future prosperity and advancement of American poultry interests depends on the officers of our association. I have faith enough in the American Poultry Press to believe it will not sanction any such work and am satisfied after the truth is known, as it can plainly be seen from my sworn statement, that it will do its part toward putting an end to such "grafting," making it a lesson and letting it be known that the day has passed when the perpetrators of such acts can go free of chastisement.

This is not written to curry favor for myself, neither have I any personal interest in any one's election, only for the good of the cause, right principles and the welfare of all. I voted and worked for Mr. Hallock's nomination and election in 1907, and no one could be more sorry than myself that I cannot conscientiously do so again.

It is the wish of the majority of the Executive Committee of the National White Wyandotte Club that I submit these facts to the editor of each one of our American Poultry Journals, calling attention to the fact that the club, with the great handicap that it had, is now on a good, solid financial footing and announcing that its financial condition is daily improving. Undoubtedly at its next meeting and election of officers, steps will be taken to make it an organized association with such constitution and by-laws that will fully protect it from further financial embarrassment and insure increasing progressive popularity to the club and variety.

You are at liberty to publish these facts in the first issue of your most valuable publication, in fact, it is the desire of the Executive Committee of the National White Wyandotte Club that you do so. We ask it in justice to our club and the American Poultry Association of which our club is a member.

Yours very truly,

H. P. RANKIN,

Acting Secretary National White Wyandotte.

* * *

Ross C. H. Hallock's Reply.

Ross C. H. Hallock replies to the charge of mis-appropriating the funds of the White Wyandotte Club.

DEAR SIR:

My attention has just been called to a circular letter, dated February 22, 1908, being sent to various Poultry Editors, by Mr. H. P. Rankin, Hartington, Nebraska, who up to the latter part of January was acting as secretary of the National White Wyandotte Club. In this letter, Mr. Rankin, as he admits, finds fault with my administration of the club's affairs for the purpose of attempting to prevent my re-election to the office of secretary-treasurer of the American Poultry Association. As further evidence of this being the object of the letter, Mr. Rankin, after having all the club books in his possession five months, has just seen fit to bring up this matter on the eve of the election, without giving me an opportunity to prove my innocence, and without sending the books or any report of any kind to or even attending the annual club meeting at Cleveland, Ohio, in January, when Mr. F. S. Hawn, Youngstown, Ohio, was chosen as his successor, and where an auditing committee could have gone over the books.

I realize many of your readers will not be interested in a personal matter of this kind, but in justice to myself and my many friends, I want to make a short, general reply to the letter mentioned in which I am charged with mis-appropriating the funds of the White Wyandotte Club.

Serving as I did as secretary of the White Wyandotte Club for five years, the results in the increase of membership from practically nothing to nearly two thousand, and the results of offering large specials which helped to make the White Wyandotte class the largest at many of the shows, all speak for themselves, and I feel confident the time and money expended by me to produce these results will not meet with the same ingratitude from all the club members.

During the five years I received no salary outside of donations at club meetings toward the close, aggregating $350, and when I turned the books over to my successor, they showed the club in debt to me for more than this amount, which I agreed to cancel so the club would not be handicapped, and asked Mr. Rankin to give the matter as little publicity as possible, not caring for any free advertisement or notoriety.

I may have made errors and mistakes and used the club finances in a manner that does not meet with the approval of all, but every cent was spent honestly, and I can produce vouchers covering every item with the exception of postage. Deduct from the postage item the amount owing me and then figure the postage on 5,000 catalogues only a 5 cents per copy, mailed free to all interested, and the postage on thousands of letters mailed to the members, and non-members asking them to join, and the postage item is easily accounted for.

True, the club did vote to offer $500 in special prizes this past season, and had I remained secretary the amount would have been raised and paid. The club has offered previously as high as $1,200 in special prizes during one show season. I defy Mr. Rankin or any one else to show where there has been a *cup not sent out* or a special prize or bill unpaid during my term of office, and on the other hand, the biggest part of the labor in getting the catalogue for 1908 started had been done in my office. It appears Mr. Rankin is not even inclined to give the "Devil his due."

I court the fullest investigation of the entire matter, which cannot be done by fighting it out through the Poultry Press, and if Mr. Rankin really has the welfare of the poultry industry at heart, I am sure it will be a pleasure to him to stand his share of the expense of an investigation committee to whom the entire matter can be referred and to whom Mr. Rankin may, if he desires, present evidence to prove his assertions.

Respectfully,

ROSS C. H. HALLOCK.

St. Louis, March 3, 1908.

* * *

In the above column, we publish a letter from H. P. Rankin, charging, it appears, Mr. Ross C. H. Hallock of misappropriating funds of the National Wyandotte Club. We also publish Mr. Hallock's reply.

Quite a number of days after these two letters arrived, we received another communication from H. P. Rankin which was very lengthy and which claims that a member of the club received a letter from Mr. Hallock for a list of persons to whom he could send club catalogues, but to whom instead, he sent his own catalogue.

It also claims that Mr. A. J. Smith, Cedar Rapids, Iowa; Mr. Frank C. Lisk, Romulus, N. Y., and Mr. Fred A. Johnson, Tacoma, Wash., states that they won State Cups during the show season of 1906-07 which they never received. The books of the club show these members to have been paid up in dues, in good standing with the club and entitled to cup. Mr. Rankin's communication also contains the following:

"Letters from members of the National White Wyandotte Club, claiming they are entitled to a setting of eggs, in accordance with the 'Special Unheard Of Offer' which Mr. Hallock sent (copy of which is also in possession of the club), which reads as follows: 'We have solicited 100 settings of White Wyandotte eggs from the foremost breeders of America. We will have one of these setting sent free next spring to each of the first 100 persons joining the club and using one of the enclosed application blanks. A list of 100 persons to whom the eggs will be furnished will be sent to every person joining the club before August 1.'"

"I have no knowledge of any provision having been made by Mr. Hallock for this Special Offer and no list of parties entitled to such an offer has been turned over to me."

We are informed by H. B. Rankin, acting Secretary and Treasurer, that five out of the seventeen persons who answered the roll call of the National White Wyandotte Club meeting at Cleveland had not paid their annual dues, and therefore were not members. Among them was the person chosen to preside, the one chosen as Secretary-Treasurer, and one chosen as officer. Article 10 of the constitution and by-laws, reads: "Annual dues shall be $1.00, and shall become due in advance, the 1st of October of each year. All dues must be paid before the first of January, following, or membership ceases, the members having been duly notified by the Secretary." Owing to these facts, the Executive Committee does not recognize an election, and has authorized the acting Secretary-Treasurer, H. B. Rankin, of Hartington, Neb., to send out ballots, asking for another vote on the time and place of meeting for the election of officers, and suggests that it be held at Niagara Falls, the second week in August, 1908, in connection with the annual meeting of the A. P. A., where an auditing committee can be appointed by both the club and the A. P. A. to go over the club books, correspondence, etc., in order that the charges made against Mr. Ross C. H. Hallock by the Executive Committee may be verified by both organizations.

* * *

Just before going to press, we received a letter from G. R. Haswell, signed as President of the National White Wyandotte Club, in which he states that the election of officers was legal, with the exception, maybe, of Secretary and Treasurer.

* * *

1908 Mating List

of the Sunswick Poultry Farm, South Plainfield, N. J., was printed by THE AMERICAN FANCIER. Mr. Geo. J. May, the Manager, wil be pleased to send one upon request.

* * *

The National Langshan Club is the new name for the Eastern Langshan Club.

* * *

At the Schenectady show, the following was reported of the 1st Black Leghorn Cockerel: "Has plainly seen black tipped white feathers and hackle." The owner of this bird claims that there is not a white feather in any part of the plumage. We also understand that the owner of the 3d Cockerel protested against the 2d Cockerel winning over this, but no protest was made on the decision regarding the 1st Cockerel.

Paterson, New Jersey

Hen Coop on Dark Night not Hotel, says Court

John Van Ness, a negro, with no regular occupation, is in the Paterson jail because he couldn't convince the Judge that he had only entered the chicken coop in the dark to find a place to sleep.

John Roughgarden heard a noise in the chicken house, and on investigating, found that Van Ness had entered the place. He ran out of the coop with a bag on his back, but was followed by Roughgarden and his two sons. The negro first dropped the bag, then his heavy overcoat and finally his under coat. One of the Roughgarden boys struck Van Ness, it is said, four times over the head with a piece of rail fence, but the blows had little effect. Policeman McGrath joined the chase and captured the negro.

Van Ness told the judge: "I didn't gone in dat chicken house to steal nothin'. I jes' wanted ter take a sleep, jedge, dat's all."

Judge Scott was not fully convinced, and imposed a fine of $25.

Advertising forms close on April 10th for April 15th issue.

Present advertising rates were fixed last August, when the circulation was only about one-fourth of what it is today. Right along, advertisers have received large returns and now, with our increased circulation, but no raise in advertising rates, returns to our advertisers will be even more profitable.

Display advertising rates, $1.40 per inch per insertion, or $22.40 for a year (24 insertions). Rate schedule shows cost for larger ads.

Classified advertising rates, 50 cents per insertion of 50 words or less. $3.00 pays for six insertions, which will include April 15th, May 1st and 15th, June 1st and 15th, and July 1st issues. Twelve consecutive insertions (6 months), $5.00. Twenty-four times (one year), $8.00. The wording of the ad. can be changed as many times as desired.

Let us again remind you that forms close on April 10th for April 15th issue. A heap more circulation than any previous one, but the advertising rate remains the same.

WHITE WYANDOTTE HEN

First at Gouverneur, N. Y. Bred and owned by Bay Shore Farm, Gouverneur, N. Y.

The best readers and fanciers are the best buyers. This is the class on our subscription files.

* * *

Mr. E. F. McAvoy, Jr., Cambridge, N. Y., has purchased the entire flock of Houdans of Theodore F. Rigg, of Iowa Falls, Iowa. Mr. Rigg having decided to devote his entire time to Columbian Wyandottes, sold Mr. McAvoy 100 Houdans for $5,000. The price paid, $50 per bird, denotes the quality of the stock and the great popularity of the Houdan fowl. Mr. McAvoy is well-known, as a successful breeder of Houdans, and was fortunate in securing this grand strain. Mr. Rigg, we understand, agrees not to breed Houdans for ten years.

* * *

White Plymouth Rock Club

Notice of Consolidation

Notice is hereby given that by a majority vote of 226 the American White Plymouth Rock Club has consolidated with The White Plymouth Rock Club, and is now part and parcel thereof. All breeders of White Plymouth Rocks are cordially invited to join this club and can secure application blanks by addressing the Secretary-Treasurer as given below. The club will issue a handsome catalogue in September and it is desired that a goodly list of members may be enrolled early enough to have their names appear therein. With the list of nearly 700 names now on the roll and what new names come in before August 10 (the date that forms close), there should be twelve to fifteen hundred names on the roll in the new catalogue. Show Secretaries are particularly requested to make a note of this consolidation and address all requests for ribbons and specials for next season to

CHAS. H. WARD,
Secretary-Treasurer,
Bethel, Conn.

* * *

The Paterson, N. J. Poultry, Pigeon and Pet Stock Association will hold their fourth annual show, December 2, 3, 4 and 5, 1908.

At our annual election, held Tuesday, March 17, 1908, the following officers where elected for the ensuing year: President, Clinton Terwilliger; First Vice President, E. Ryerson Taylor; Second Vice President, J. C. Punderfort; Third Vice-President, Dr. Gilbert Johnston; Secretary, O. H. Quentin; Treasurer, Holden Rigby. Executive Committee: Peter Hillman, John J. Brown, Chas. F. Dermond, Joseph L. Bustard, M. Millington, Paul Mial and Samuel Ross. Auditors: Joseph Riley, Louis Claxton and James Handford.

Our association last year paid all its obligations promptly and with a good financial account to our credit, a good and tried set of officers to start with, the prospects are good for our coming show, which promises by present indications to be a hummer.

Hoping you will kindly give us notice of the above in your valuable journal, thanking you in advance for favor asked, I remain,

Yours very truly,
O. H. QUENTIN,
Secretary,
Clifton, N. J.

A Dollar Book for Four Cents.

Breeders of Buff Wyandottes by sending four cents in stamps to Henry R. Ingalls, Greenville, N. Y., Secretary American Buff Wyandotte Club, can get the 1907 Catalogue of the club. It is worth $1 to every breeder, do not neglect to send for it.

Every fancier interested in Buff Wyandottes should join the club and help put the breed to the front. A strong club is a life insurance of the breeds popularity; no breeder is so poor that he cannot afford the $1 that the membership costs.

As a special inducement for breeders to join the club at this time, we offer a fully paid up membership to October 1, 1909 for $1. Let me hear from every breeder of Buff Wyandottes who read this. Address, Henry R. Ingalls, Secretary, Greenville, N. Y.

* * *

$7,500 paid for a pen of fowls. $5,000 paid for 100. This is in America, of course. In England, 500 £ a bird ($2,500). The poultry fancy is enjoying prosperous times, especially in the breeding of thoroughbred exhibition stock.

GEESE, TOULOUSE—All to Van Vranken. EMBDEN—All to Cosydale Farm.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

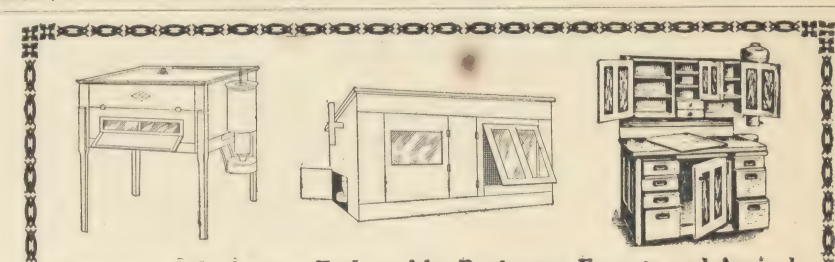
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.



HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

resident, American Houdan Club. From 1900 to 1907.

LEG BANDS for Poultry and Pigeons are the acknowledged leaders. Firmest and most secure lock. Guaranteed to **stay on.** Price, post-paid, 12 for 15c; 25-25c; 50-40c; 100-75c. All supply dealers sell them. Sample band and B. P. Rock circular sent for 2c stamp.

Frank Myers, Mfgr., Box 67, Freeport, Ill.

"Red Prince." 1st Cock, Scranton, 1908; 1st Cockerel, Scranton, 1907; winning Rhode Island Club Color Special. Owned by Aaron Powell, Schultzville, Pa.

IN other columns of this issue will be found a report of the Cleveland Show. During the last four years, this exhibition has brought together some very fine specimens in the pigeon section.

The show this year was no exception, and the competition in most of the classes was strong. Cleveland appears to be the center of a great German Toy section, and they were certainly shown in goodly numbers.

James Glasgow traveled all the way from Mahwah, N. J., with the famous Mountainside string, and didn't come back empty handed.

A great many of the German varieties are very pretty indeed, and the rare markings and colorings make them the most difficult, this being the case, they afford fanciers plenty of opportunity of showing their skill in the breeding pen.

During the next few months we expect to publish a few articles and illustrations of these varieties.

* * *

Secretary Whitney of the American Pigeon Club has mailed a report of the fifth annual meeting of the club.

The idea of offering cups, medals or both for the best bird in the section or show, is a good one and should be the means of attracting fanciers to the club. These cups or medals, we believe, can be raised by subscription, and be of no extra expense to the club.

We think it would be far better to offer less expensive trophies and place them on the best bird of a variety.

For the past two years we have acted in the selection of the best bird in the show, and must say it is very unsatisfactory award to make.

The judges of the different classes were assembled together, each bringing the best of their varieties to compete for this honor, the award is given by ballot, and although it is the majority's choice, it has not proven a success.

After a long discussion of the band question, during which the only points of note were brought out by the late Mr. Eckert, in that he considered the bands now used for African Owls are far too large, and that it was possible to band a very small hen with these bands in her adult form. Dr. Hurdis asked the club to go slow in the enforcement of the band rule, as small shows would be killed if the rule was enforced up to the letter, for most of the breeders in these small sections have not as yet grasp the necessity of having such rules.

A motion, allowing shows to use their own judgment in the enforcement of this rule was passed in the interests of the small shows.

Mr. Gorse, reporting for the band committee, said that the club was to proceed this year under the resolutions passed last year, which was as follows: That the chairman of the band committee shall make arrangements with the secretary for the purchase and distribution of the 1908 bands, and that the Chairman be empowered to collect money among the members to buy the bands. Arrangements have been made to proceed under this resolution and dies bought which are to be used exclusively for our bands. The resolution that all bands shall be distributed through the secretary is more than ever in force, for they can now be obtained in no other way.

Then the matter of diplomas, trophies, cups and so forth, was brought up, and after a discussion, which really developed nothing, the matter was referred to a committee of three, to be appointed by the President, who were to inquire into the best method of handling this feature. This committee to confer with the President and the Secretary from time to time. They to report to the Board of Directors on Sept. 1, next. The meeting then adjourned.

Eastern Fantail Club.

Annual meeting of the Eastern Fantail Club, held at Madison Square Garden, December 21st, 1907.

Members present: Geo. E. Rowland, W. J. Stanton, Jas. Blair, Alex. Hay, H. A. Johnson, N. M. Shaw, Jas. Glasgow and H. M. Pockman.

In the absence of President T. A. Havemeyer, Vice-President Rowland was asked to take the chair.

Election of officers resulted in the following: President, Geo. E. Rowland; Vice-Presidents, T. A. Havemeyer, Jas. Blair, W. J. Stanton, Alex. Hay and H. M. Pockman.

The minutes of the previous meeting were read and approved.

The following gentlemen made application for membership. G. E. Hook, New Bedford, Mass.; J. H. Hathaway, 498 Cottage, New Bedford, Mass.; George Moore, 1927 Fourth avenue, Altoona, Pa.; H. B. Parlow, New Bedford, Mass.; D. Barbour, 16 Poplar street, Yonkers, N. Y.; Irwin Johnson, 167 Beast street, Yonkers, N. Y.; H. H. Horton, Lynchburg, Va., and Geo. Ewald, Cincinnati, Ohio. All were elected.

Report of Committees. None.

Election of Officers.

Unfinished business. None.

New Business. Proposed by Jas. Glasgow, seconded by H. A. Johnson, that Mr. T. A. Havemeyer be appointed judge at the next annual meeting of the Eastern Fantail Club. Carried.

Proposed by Mr. Blair, seconded by Mr. Shaw, that the Secretary be instructed to solicit cash subscriptions, etc., by letter to all members, on or before September 1st, 1908. Carried.

Proposed by Mr. Pockman, seconded by Mr. Blair, that the classification for Fantails remain the same as this New York Show for another year. Carried.

Proposed by Mr. Blair, seconded by Alex. Hay, that cash specials to the amount of $1.00 second, and $1.50 third, be placed on all old Fantail classes, and on all 1908 classes $2.00 first, $2.00 second, $2.00 third and $1.00 fourth, and that four silver medals shall be placed by Secretary for the novice. All the above specials to be awarded at the club meet in 1908.

Should the club meet again at New York, Boston shall have the following silver medals, or vice versa: Best White Fantail, any age; best Black or Blue Fantail, any age; best Red or Yellow Fantail, any age; best Saddle Fantail, any age. Carried.

Proposed by Mr. Pockman, seconded by Mr. Blair, that the Secretary mail voting slips for place of meeting, July 1st, 1908. Carried.

Proposed by H. A. Johnson, seconded by Mr. Glasgow, that a vote of thanks be extended to H. M. Pockman for his services during the last five years. Carried.

Proposed by Mr. Pockman, seconded by Mr. Shaw, that a vote of thanks be extended to Dr. Fred'k C. Peterson, for his kind offer of a silver cup. Carried.

Proposed by Mr. Shaw, seconded by Mr. Johnson, that a vote of thanks be extended all donating cash specials. Carried.

Proposed by Mr. Stanton, seconded by Mr. Hay, that the meeting adjourn to that date, so ordered. Carried.

* * *

Grit is one of the most important things in the pigeon loft, and it is also one of the most neglected. It is quite impossible for pigeons to thrive long without it, and this is one of the chief reasons why people do not have the success in rearing birds.

It must be remembered that pigeons don't masticate their food and it is very essential that grit should be before the birds at all times.

* * *

In speaking of Pigmies, Mr. W. Hammonds says: "They breed well, and rear their own youngsters. I keep no feeders, as I much prefer keeping a few extra pairs of Pigmies instead. I prefer small lofts to the large ones, say 6ft. square, 6in. or 8in. off the ground, with a fair amount of light and good ventilation. Breed on the floor, or if shelves are used they should not be more than 18in. off the ground, which should have a good layer of coarse pine sawdust. The aviary should be 2ft. off the ground, 6ft. long, and 4ft. wide, the top well covered to prevent the rain beating in. Inch-mesh wire netting should be used to keep out all enemies. The floor of this also should have a good layer of coarse sand. If riddled, say, once or twice a week, it will keep them in good order without using fresh sand or sawdust every time they are cleaned. I use Spratt's water fountains and feeding pots, which I like very much. The corn I use for feeding is peas, tares, wheat and barley, a little hem and canary seed at intervals. My nestpans are of earthenware, with small layer of sawdust at the bottom, and then a little wheat straw.

"Now for a beginner I would recommend him to get stock birds, as they can be bought cheaper than show birds, say a stylish blue cock with spare limbs and as close as you get them, and a rough hen, blue or silver; if the latter, the color should be lively, with as dark bars as possible, black if you can get it. By doing so you will keep the bars a very good color on the blues. Now, after my experience, if any time you are sending a pair of birds away on approval, and they should happen to leave an egg behind, take care of it, for one never knows what may come out of it."

* * *

Readers will oblige us greatly by sending personal news items of interest to this locality. It will get our readers in all sections acquainted with each other.

* * *

A Peculiar Pigeon.

One of the most peculiar yet attractive variety in pigeondom is the Trumpeter.

During the past few seasons we have noticed some grand specimens exhibited at both New York and Boston. Although the number of breeders are small, many fine youngsters are breed each season.

In a recent issue of the *Feathered World,* the writer says:

"At first sight it may be said that the Trumpeter is hardly a breed for an amateur to take up; but if he has had experience of any of the harder varieties and wishes a change or an addition to his loft, then the Trumpeter introduces him to perhaps the most remarkable example of the pigeon fancier's skill in breeding.

"Alone amongst pigeons the Trumpeter can boast of a feather property similar to the crest of a Crested Canary, known as the *rose.* Other points are the *shell* and *foot-feathering;* properties, however, shared by other varieties of fancy pigeons.

"The size and radiation of the *rose,* which should cover practically the whole of the top of the head; fullness, even shape, and set-on of *shell* and wealth of *foot feathering* are points which will tax the amateur's skill to obtain; but coupled with the quaint charm of the pigeon, its peculiar 'coo' and dignified appearance are well worth striving for.

"The colors in which Trumpeters are found are blacks, whites and mottles. Blacks should be a sound lustrous jet black, and whites as spotless as possible, free from any other colored feathers. Mottles, on account of the difficulty in breeding them with correct markings, are generally, if equal in other respects, placed above the self colors."

* * *

Pigeons at Cleveland, Ohio.

By JAMES GLASGOW

The exhibit of pigeons was a surprise for the Middle West fanciers. Birds from all over the country made their appearance at this show.

The superintendent, Mr. Thomas Dorkin, deserves great credit for the way in which he looked after the birds. The best was none too good for the pigeons, was Tom's motto. Eastern fanciers should be on the lookout for the Cleveland show next year, we understand, the management wish to do everything within their power to make it one of the leading shows of the country. Mr. L. A. Jansen and Mr. Charles E. Lang did the judging, and with few exceptions, their decisions were very satisfactory.

ENGLISH POUTERS—Only five, fit to show in very good company. PIGMIE POUTERS—38 in all classes; some nice birds among them, but lack training. FANTAILS — 79 in all classes; there were a number of good ones, especially in Whites. J. Kramer won special for best pigeon (belonging to a member), with a very neat White. Dr. F. H. Howland, made an entry of 14 and captured 13 1sts and 1 2d. We believe this is a record, against such competition. DRAGOONS—The well-known stud of H. J. G. Smith was there (enough said). JACOBINS—Were a hot class; Gorse's birds got in late, otherwise the awards might have been different. MAGPIES— Jansen's winners were full of quality. OWLS, TURBITS AND ORIENTALS—Frills came out with some good ones.

A TYPICAL TRUMPTER

Owned by Leon R. Waite, Springfield Mass.

SWALLOWS (The club meet)—The best in the world was there, and many ideal specimens were shown. ARCHANGELS, BARDS AND TUMBLERS—Contained New York winners, and others at good quality. Pack Bros, showed a wonderful collection of Hen Pigeons, the best we ever saw. Havemeyer Bros., Mahwah, N. J., introduced a number of the rarer varities of German Toys, and many a German got homesick during the week looking at their quality.

* * *

Cleveland Pigeon Awards

POUTERS—All to Theo. O. Taubert, except White Cock, 1st, S. E. Wurst, Red, 1907, A. O. C., hen, 1st, John Schmidt.

* * *

Secretaries of poultry and pigeon exhibitions will confer a favor by sending in their reports and dates for their coming exhibition. What we want is the news while it is news.

* * *

Try an ad. and obtain results. Hundreds are doing it in this issue. Why? THE AMERICAN FANCIER places your announcement before a great army the first and fifteenth of each month. Everyone of which is directly interested in poultry, and with means sufficient to purchase that which attracts their attention.

Have your name a household word with the better class of poultry men and you will feel the result.

LARKS

THE IDEAL SQUAB BREEDER

Your Pigeons will do well if you give them FOUSTS HEALTH GRIT, in use for 18 years

A preparation necessary to the digestive nature of cage birds, combined with medicinal properties that insures health and sturdiness. Most all the large pigeon breeders use it and one says "of course, there are lots of other grits cheaper, but there are *none as good as Foust's.*" No other grit or medicine needed. Send for free sample and watch the pigeons eat it.

$2.00 PER 100 LB. SACK, F.O.B., CAMDEN.

FOUST'S, 721 Federal Street, Camden, N. J. Write for Wholesale Price

GERMAN PIGEONS

Maltese and Hungarian Hen Pigeons, reliable and prolific breeders, large and heavy birds, free board mail steamer in New York or Boston in lots of 5 pr $25, 10 pr $45, 20 pr $80, 40 pr $150, 100 pr $350; Hen Pigeons my specialty, satisfaction certain. Send money order. **H. UNZELMANN, Ottostr 38, Hamburg, Germany.**

THE HEALTH GRIT

For squab breeders and fancy pigeons I have the best grit ever put in a pigeon loft. My testimonials from fanciers prove it. Try a bag, $2.00 per 100 lbs. Send for circular and wholesale price. Agents wanted.

My White Clean Leg Tumblers are well known in the show pen, look up record. Stock for sale at reasonable prices. L. G. BROSCHKOWSKY, 611 So. 6th St., READING, PA.

NISEQUOGUE STUD

JUMBO SQUAB BREEDERS

Are Largest and Fastest Breeders. Every pair guaranteed mated and banded. Money-makers everywhere. If you wish to be successful, start with Our "JUMBO HOMERS." Send 4 cents in stamps for our large ILLUSTRATED BOOK 'How to make MONEY with SQUABS'

PROVIDENCE SQUAB Co, *772 Hope St, Providence, R.I.*

STAPLETON PIGEON LOFTS, 12 Thompson Street, Stapleton, N. Y. Offer pure bred White Homers; four pairs mated, $10, worth double; Red Carneaux, mated pairs, bred from our own imported birds direct from Belgium; young stock from either at half-price; send P. O. Money Order now, for some of these fine birds and avoid any disapppointment.

HOMERS AND CUMULETS FOR SALE

The HOMERS are grand squab breeders, all related to 500 and 1,000 mile birds. Can spare lots of five pairs or more at 80 cents pair.

The COMULETS are nearly pure white with the whitest of pearl eyes; they are also grand breeders of large, white-meated squabs, and are the highest flying pigeons of any variety, very few of them in this country, as they are all imported stock, Will sell two pairs or more at $1.50 pair.

A. S. DENNISON, Manager,
WARWICK, R I.

NOTES FROM A PIGEON FARM

Result of 40 years' experience with Pigeons. Most valuable to Fanciers and Squab Raisers. Absolute truth about both sides of Squab raising. Invaluable to beginners. Interesting and instructive to everybody. Entirely different from any other pigeon book. Mailed on receipt of TEN CENTS.

Eggs for Hatching

ROBERT OFFICER

North Grafton, - - Mass.

R. B. SANDO'S BUFF ROCK EGGS

I am getting so many eggs must sacrifice regular $3 and $5 value for $2 per setting, three settings for $5, or 100 eggs for $8.

This reduced price is no advertising dodge, but absolutely honest, as every one of my four pens is headed by a prize-winning male bird and all of my prize-winning females, scoring up to 94 in hot competition, are in these pens.

Although never defeated in the show room, my Buff Plymouth Rocks are bred for business as well as beauty, and are great layers, large and vigorous.

Every female on the Sando Buff Rock Farm is laying, eggs are running 96 per cent. fertile, and chicks are hardy and easy to raise. Don't you think this worth looking into AT ONCE?

Remember, I guarantee satisfaction, so order direct from this ad.

The American Fancier

THE LITTLE CHICK AND ITS CARE

Written for
THE AMERICAN FANCIER
by
Rev. C. E. Peterson

To have fine fowls necessitates at all times proper care which must begin not only from the time the chicken is hatched but before the egg is laid from which the chicken is hatched.

Much is said lately about chick mortality and weak chicks and chicks that must be doctored even inside of the incubator, eggs fumigated and disinfected, hens fed on nostrums to disinfect her insides before she lays the egg, and so on ad nauseum until it looks very much like that the next thing in chicken culture will be a chick hospital with trained chick nurses to see them over one or more danger periods so called.

Hens are forced for eggs all the year around and pedigreed stock is all the rage just now and like everything else, is carried to an extreme. What earthly use is a hen for breeding purposes that has been forced to yield an abnormal number of eggs during the year? No good at all; she is simply ruined for any such purpose.

Breeding stock should not be forced for winter eggs; should not be fed on mashes and condition powders, but should have a ration composed of whole grain and she should work for every kernel of it, same as the average farmer's fowl does.

All around us we hear reports of good hatches from sitting hens, twelve and thirteen chicks from the same number of eggs, chicks strong and robust and fit to battle for an existence; no trouble with them, and why? Simply because the breeding stock was in first-class condition, strong and healthy. Not many eggs in the winter, that's true, but when nature requires this same hen to go to laying, go broody and hatch a clutch of eggs she hatches them as successfully as a wild bird does.

The great trouble is with the poultryman, not with the hen; close quarters, concentrated food, lack of exercise which gives to the poultry unhealthy conditions under which to live and, like the rich, over-fed, pampered child, becomes flabby and unfit for proper exercise. When a well-hatched chicken first sees the light it is a very active little downy fellow; beginning to search for food as soon as it is on its feed; and there need be no waiting for three days to feed them, give them a little and often after they have been under the hen as long as she thinks necessary, and then she will leave nest with her brood.

I have had less losses when feeding in the good old way—one hard boiled egg with three times its quantity of bread crumbs mixed together, and just a drop or two of sweet milk to moisten it with. There is nothing better and I will guarantee you this much, that when a man gets the prices I get for high-class stock he will not feed anything that will increase his loss, but rather what will decrease it.

Any chick grain which can be bought ready-mixed cheaper than you can do it yourself will answer the purpose for scratch feed, and if you want strong large fowls then give them hulled oats from the time they are large enough to eat it; there is absolutely no better food to grow chickens on and it is what may be called *Nature's Balanced Ration.*

Give plenty fine grit, clean cold water, green food if so early in the season that grass is not available, and keep them free from vermin, and if the parent stock was strong and robust there will be no trouble to raise them to a perfect maturity.

If, unfortunately, the chicks must be kept in some small enclosure, which is often the case early in the season, and in some climates as late as last of April and early May, then let the chickens work for their living if you want to keep them in health. I have had chickens, in fact have them now in a small brooder-house, and in six inches of chaff with fine grain mixed all through it it is fun to watch these little chicks dig down into the mixture so sometimes you can hardly see them, but the chicks were well-hatched and are strong, healthy, and fit to work for a living, and will make breeding stock that will in turn produce chickens of the same kind.

Another thing of paramount importance is this: hatch your breeding stock under hens and let the hens take full care of the chickens; let them have the run of the place wherever possible, and if you have such a thing as an orchard let the chicks and hens run in it, and the orchard will be better for it and the chickens will have finer plumage when mature than otherwise would have been the case.

Make the coops as large as possible—three square feet is none too large—then when inclement spring weather comes the chicks will be dry and comfortable and keep on growing while if, on the other hand, they are kept in dark, ill-ventilated, leaky, small boxes, wrongly termed coops, they will be retarded in their growth and, after a few exposures of this kind, will have stamped all over them that runty look which means a never-do-well for good and forever.

Don't have all sizes run together; the larger ones will appropriate the best morsels of food and tyrannize over the smaller ones, and even chicks separated in age by two weeks will show this same tendency which in brute nature is always the case.

As soon as you can distinguish the cockerels from the pullets separate them; they need different care. You cannot (that is, I never could) overfeed a cockerel When growing give them all they will eat and with it bonemeal and crushed bone and green bone if you have it, and you will have no shaky-legged chickens on your place.

If you are growing crested fowls they should also be looked after, as some of the very large crested ones we have to separate at feeding time or the rest will get the best of the bargain, as the first-mentioned ones are of course slower in picking up the grain.

In very wet weather better keep them indoors; the rain will soak the crest and make it heavy, then when the sun comes out a dust bath will finish the ruination of the crest, which more than likely will be skin-pulled for good, and not regain its shape.

The same holds true of the breeds with profuse and heavy leg-feathering. Keep in doors on rainy wet days.

Early in the fall the young stock should be put into their winter quarters; in fact this should be done as soon as they show signs of beginning to lay, for if they are allowed to lay for a long time on the ranch, change of food and conditions will retard the laying for quite a while.

These few simple instructions which I have here given will make anyone succeed with chickens. Proper breeding stock from which eggs for hatching comes, proper feeding, proper care, and no pampering and patent medicines will be needed.

EASTER GREETINGS

Mating Single Comb Brown Leghorns

In mating the S. C. Browns, it is necessary to use two matings, one for Cockerels and the other for pullets.

In mating for Cockerels, pick out a male to head the pen that has a small, five-point comb, free from twists, side sprigs, and that does not follow the neck.

Eye, red in color (or bay); hackle, well striped, but do not have the stripe of black running out to the end of the feather, giving it a smutty appearance; saddle, also stripped, same shade of color as in hackle, i. e., having the red all around the black stripe.

Avoid the purple in wings, breast and fluff black; tail, black and carried low; have good length in legs, so as to avoid a squatty appearance; same can also apply to the females; color of legs to be yellow.

Females to mate with above should have small, four or five-point combs; red eye; avoid smutty hackle; body and breast to be dark, or a dark grey in color; legs, yellow.

Do not have the same defects in females as in the males.

In your Pullet mating use a male with about the same comb (four-point preferred), as in the Cockerel mating; eye, red.

Hackle only wants to be striped and lemon color; avoid black stripe running to the end of the feather; legs, yellow and of good length.

Females to have five-point comb, folded to one side (avoid double folds; eye, red; hackle, lemon color; back and wings, even shade of brown (no shafting); breast, salmon colored, shading lighter underneath the body; legs, good length and yellow in color. Bear in mind you are breeding Leghorns, and do not breed Minorca combs and wattles on them. Any question on above, I will be pleased to answer to the best of my ability. All persons interested in the S. C. Browns are earnestly requested to become members of the American Single Comb Brown Leghorn Club. Write for the 1908 catalogue.

E. W. Staebler,
Secy. & Treas.
2449 Tremont St., Cleveland, Ohio.

* * *

While the habit of the turkey is to roost high, this privilege can not always be accorded if a structure is to be provided for the birds in which to roost, says *The New York Farmer.* If they are to roost in the trees, then they may choose their own limb.

It is a good plan to make the turkey house low, but place the roost as high as possible without humping the birds up against the roof. The ventilation in such a house must be largely provided from the bottom, and this is done by having a row of windows not over 18 inches high at the bottom so arranged that they may be lifted up to let a current of air to enter.

These windows also will light the floor of the house, and a larger window may be placed on the opposite side, but higher up, in order to light the house. The turkeys will be anxious to get out of the house early in the morning to roam, so, after they have gone to roost, sprinkle a little grain in the chaff on the floor to keep them busy in the morning until they are let out.

Turkeys on the range must be well fed during the period they are under cover, particularly when the feeding on the range is poor, and when it is essential to keep them in good shape and able to fatten readily a little later.

GROWING DUCKS.

A contributor to the "Indiana Farmer" writes: The earlier ducks are hatched, the more profit, but the prices are good until the last of June, and as one should have the ducks ready for market at six or eight weeks of age, there is yet time, but none to spare. We had our ducks weighing from four to six pounds at six weeks of age, but the feed must be plentiful, and never a feed time passed over.

By marketing so young the ducks can be pushed and be kept in large flocks, indeed the whole output will flock together unless fenced apart. Lice never troubled us; the few that were on when hatched were removed by placing a cloth, slightly sprinkled with coal oil over the box in which the ducklings were placed, as soon as well out of the shell.

The box must be rather shallow to make the odor from the coal oil strong enough to kill the lice. One hen was placed in the coop with perhaps 16 or 18 ducklings, and she was well dosed with lice-killer, but in a very short time the hen is not in it; for this reason a warm coop must be used.

Keep dry clean litter in the coop for the ducklings to roost on, and a pen of boards around the coop is a necessity until the ducks are a week or more old. We feed cornmeal exclusively; but, take notice, sand was always mixed with the meal, a handful to each quart of meal, and was wet with skimmilk when obtainable; when not, water was used. Mix to the consistency of soft dough. Where milk cannot be used, procure some beef meal, and use as directed.

We gave all they would eat up, every time they came to the troughs, which was four times a day, the first feed early, the last feed late in the day. If at any time they went away and left feed in the troughs, it was all scraped out clean, and once a day the troughs were scrubbed out and inverted, to drain.

Give water in a vessel deep enough for them to immerse their heads, for in this way they cleanse their bill and nostrils. They literally shovel in their feed. Some grass is needed, but if the run is bare, give lawn clippings, cabbage or lettuce. Swimming is not necessary; indeed many think it a detriment to their fast growth, as it induces too much exercise.

If any develop "leg weakness" remove to a pen with clean dry straw and increase the proportion of sand in their feed; but if a dry clean place to sleep is provided, and sand is never omitted, there will not be trouble with them. A pan of cracked charcoal should always be in their reach. Their gain is almost beyond belief, but as soon as they are of marketable size, market them; for the price will go out of sight, the wrong way, in a week.

The drawback to forcing ducks is the loss one feels when they are sold, the tender ones will be lonesome with the quackers gone; however, if hens have been set on chicken eggs, there will be little chicks to take their place, so two crops on the same spot may be had.

* * *

Vital Points in Connection with Stock Birds

The selection of stock birds, and the care and management of them, is a matter to which one cannot attach too much importance. And beginners might be benefited and saved from the experience of a disappointing breeding season by the mention of a few vital points in regard to breeding stock. The present is the time to consider some of these matters, and if this care is not taken it will be hopeless to expect the best results. When the exhibition season comes round again, and prizes are being carried off by tip-top birds, their owners whomsoever they may be, will be persons who have neglected nothing. Now, all the hints on rearing and all the skill and care in the world bestowed on chickens will never make up for defects, deficiencies, or matters of neglect in regard to the present stock. This is the rock and bottom of a really successful breeding season. Now for a few important points. Health and stamina in every bird is the first thing to secure. This has a lot to do with the strength of the chickens. Weakly chickens are troublesome, prone to disease, difficult to rear, and cannot be expected ever to come up to perfection. Exhibition points in form and feather are many; they vary in the different breeds, and they cannot be dealt with in a few words, but health and stamina there must be in addition to these for a successful issue. Strain and parentage of breeding stock is another vital point. "Like begets like." Stock birds should all be fully matured, and usually the best results are to be obtained from hens in their second year mated to a vigorous, early-hatched cockerel. Breeders should have plenty of exercise, and a free grass range, if possible should be allowed. Hens that have been laying for some time are not the best to breed from now. Stock birds should not be over-fat, and should be sparingly fed; no forcing should be resorted to at all. Soft food should not be given too freely; three mornings a week is often enough. Good short, fat oats and wheat are the best grains to use, and cut green bone and fresh green food should be supplied daily. And, lastly, care as to the male bird is very important. "The cock is half the breeding pen," and needs to be kept in fit condition all along. "Strength goes in at the mouth," and some cocks do not eat enough to maintain their full strength, being over anxious about the hens. Such birds should be fed apart daily; bread-and-milk, scraps of lean meat, hemp seed are all good for stock males. There is still another point that calls for mention—breeding stock should be dusted with insect powder when mated up, and kept free from vermin. These hints may also serve to convey a useful lesson to purchasers of eggs for hatching, viz.: to purchase these from reliable breeders, who will understand and see to all important points such as are above named. And, when this is taken into account, they should not grudge paying a fair price for sittings of eggs that can be relied upon with tolerable certainty. —Rev. J. A. Haigh, L.Th., Burnopfield, R.S.O., County Durham, England, in *Feathered Life.*

Winning Jubilee Orpington Hens

Owned by H. F. Atherton, Moosic, Pa. 1st and 3rd Madison Square Garden, December 21, 1908. 1st and 2nd Scranton, Pa. Both have won 1st at Madison Square Garden at previous shows.

WHITE MINORCAS
Owned by H. J. Teetz, Gloversville, New York.

Breeding Rhode Island Reds

A number of our readers have requested an article on this subject. The following was written for *The R. I. R. Catalogue*:

"Now as to proper mating to produce ideal birds, it is the old story in a measure, that like produces like, but, as in other breeds, it is safer to know your blood lines and what is back of the birds to be mated. To a beginner:—In selecting hens, which I like best, as breeders, you are very apt to be deceived in your bird, as many of them that were good color as pullets, and are many times best breders and producers of good stock, you would not take a second look at in regard to mating to produce fine stock, as they have been through a heavy season of laying. As they are such phenomenal layers the strain on the system takes the life from the color of the plumage, which makes it light or faded. Still the constitution and bodily health has such vigor, they can stand the wear and tear and will produce good stock. Of course, if we have one that will go through and still hold her color, I prize that kind very highly. Then look out for the hen that shows up fine, that as a pullet was a scrub, they are many times worse than useless in the breeding pen. To the *female* we look for shape, size and Rhode Isand Red character. Now, after you have selected your female that has good shape and as good head points as possible, we come to the *male*, on which we depend mostly for color and stamina, while a great deal depends upon surface color, as that is always in sight. Still I think undercolor quite important as to breeding qualities. It may not always be the cleanest, purest colored, or the darkest colored, but strength and richness, is important. Don't mistake my meaning as to strength and richness, as it is not always the darkest bird that is the richest. If a dark bird has pure under color and brilliant surface color, very good. Sometimes a rather lightish male that is rich and bred from a dark bird, makes the best breeder.

Avoid: Extremes in color between male and female. If, as many say, my pullets are a little light in color, it is safer to darken color by degrees than to attempt doing it all in one season by using an extremely dark male, as this is one of the causes of unevenness in the flock.

Line Breeding

Line breeding, when properly carried out, is all right for bringing out certain requirements and fixing some of the points desired, but one should thoroughly understand line breeding, and Rhode Island Red characteristics before attempting it to a very great degree, as this breed was made up by out crossing for many years. Do not mistake *line* breeding with *in* breeding.

Out Crossing

It is a well-known fact that Rhode Island Reds are the result of from sixty to seventy years or more of out crossing and has been one of the main factors in producing great strength and strong constitution and laying qualities which are some of the principal points that have brought the Rhode Island Reds to the present popularity. This feature cannot be overlooked, to maintain *ruggedness,* but, the same as in line breeding, one must be careful, as it is important you know the line you are using for this purpose.

While the Reds are a very old breed as bred by the Rhode Island farmers, but very few fanciers have bred them many years, and one taking farm stock to start with must not expect to breed out undesirable qualities in a minute. My advice is: Go slowly with farm-bred stock until you know their characteristics, as they vary on different farms. Some farmers fancied one shade of cream white, while another a different one, but all were after laying qualities and poultry.

Select birds for out crossing from such strain, if they can be found, that have been bred on the same line for a number of generations. The best results I ever obtained in a single season was from some females I got from an old farmer that bred them carefully for years without new blood. While they were not show birds, they were strong in some of the requirements of the Rhode Island Reds standard. These females were mated with one of my own line-bred males and that had been line bred carefully for ten years or more. The union of these two strong bloods brought great results.

I think these points must be considered in maintaining the old-time vigor and hardiness of the breed. We often hear of those good old-fashioned Red birds spoken of, which I believe can be produced to-day as good and better, if one will stop and think. Get the old fashioned type as we call it, fixed in your mind, then learn the true color and stick to it, but don't take birds that were produced by accident and expect to breed standard birds in one season."

Lester Tompkins.

Turkey Mother's Wild Partridge.

A little brown partridge which managed to escape the gunners last Fall, has attached itself to a flock of turkeys on the farm of Thomas Brown, near Dallastown. A turkey hen has accepted the partridge as one of her brood, and it has become so tame that it will eat from the hands of the farmer's children.

The Second Madison Square Garden Brown Leghorn Cockerel with a History. Owned by the Astoria Leghorn Yards, Astoria, L. I., N. Y.

The above cut reminds us of a curious episode in which this bird, as Cockerel, was principal, and which ended in THE AMERICAN FANCIER office. One would hardly suppose it possible to openly steal a Leghorn at any show with the consent of the management, but this is what actually occurred.

After winning second at Madison Square Garden, the bird was sent to a show outside of New York, where he easily won first. When the owner arrived on the third day of the show, he found his bird in another cage, and a worthless specimen in his own. Crediting the mistake to improper cooping, he informed the Secretary, and the necessary change was made in the presence of the other party. (Later it was brought to light that the other party himself had changed the birds). Thinking everything settled, the owner locked his cage and returned home. Imagine his surprise when, upon uncrating his return coop, he found the other Cockerel, instead of his own. It was later developed that the other party had claimed the bird on the closing night of the show, and having two witnesses who swore they had seen the bird in his yards, the Secretary sprung the cage door and let him have the bird.

When the show authorities discoverer their mistake, they immediately obtained possession of the birds and arranged a meeting at this office to which each was to bring proof of his ownership. The fraudulent party, however, did not show up, and the owner readily proved his claim by a letter from Judge Burgott, who had judged the bird at the Garden, stating that he had two primaries broken on the right wing, which fact had deprived him from winning first at the Garden. What subsequently happened to the other party we don't know, but we are certain that he will never exhibit at any show if it can be prevented.

LEONARD W. LOTT & CO., :: :: 108 FULTON STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

On cover page of this issue is a reproduction of the First White Wyandotte Cockerel at the last Madison Square Garden Exhibition. This bird won in a class of 51. Bred and owned by Owen Farms, Vineyard Haven, Mass.

* * *

For centuries, at Easter-tide, the egg has been used as a symbol of the origin of life, and the Persians undoubtedly began, with their wonderful dyes, the coloring of the egg. From primitive days the Easter egg has been used as an emblem of the resurrection and an interesting Syrian story is that, "The night before the resurrection a bulbul (the nightingale) perched in an olive tree in the garden of Joseph of Arimathea and through the night poured out her soul over the still sleeper in the tomb wherein never man laid—when the first Easter dawn broke over the eastern hills the egg in the nest of the brooding bird sparkled with gold, crimson, blue and orange; so we color eggs as a memorial to the lonely singer who sang by the Holy Sepulcher 1900 years ago."

* * *

Ban on Live Easter Chicks

The Society For the Prevention of Cruelty to Animals has notified various dealers that it would be a violation of the law to sell newly hatched chickens as Easter gifts.

* * *

In our issue of February 1st, we wrote that it was only a matter of time when the poultry publications, that did not publish full list of awards, but only the winnings of their advertisers, would change their method and decide to publish the complete list or lose a number of their subscribers.

Two poultry papers, that in the past did not give complete list of awards, have recently decided to do so, believing it is what their readers desire. It seems to us that they have been forced to do this, because if it was only a matter of choice and for the benefit of their readers, why did they not do it long ago?

A reader, in looking over the awards, wants to see who wins and not only the names of a favored few.

Of course, a magazine cannot give a list of all the exhibitions, but when a list is given, it should be complete, without favor to anyone.

Too many shows are run on the chance that the entry fees and admittance money will pay all obligations. To make a show a success it is necessary to secure the confidence of the exhibitor, and one way this can be done is to have sufficient capital on hand to pay all expenses and not rely on only chance.

* * *

Recently a man called at a number of houses in Cleveland, Ohio, and sold fresh country eggs for about 15 cents more a dozen than the price asked at the grocers. But the housekeepers were willing to pay a little more for eggs that hadn't been laid for more than twenty-four hours.

As rapidly as he sold the eggs he had, he would go to the nearest grocery and buy eight or nine dozen more of the ordinary "just fresh" eggs. In this way he made quite a lot of money, even if his customers couldn't eat many of the eggs.

This man is no more dishonest than is the breeder who advertises to sell eggs from winning birds, but sends eggs from non-winners or buys from neighbors to fill his orders.

* * *

In the State of Iowa, eggs are sold by weight and therefore, a dozen small eggs will not bring the same price as a dozen large ones.

* * *

Utica's Next Show

Will be held from Dec. 14th to 18th. Premium list will be ready October 15th. N. Gaymonds, Secretary, Maynard, N. Y. At the last show there were 1,100 birds entered and the coming show will undoubtedly show a large increase.

* * *

Rankin vs. Hallock.

Of all crimes, slander without any charge, is the meanest of meaness known to human nature. If one man knows of any dishonesty in another, he should speak out manly; if he is not possessed of this moral courage he had better say nothing rather than vilify another by slanderous subterfuge trying to blacken his character. That is one side. Now on the other hand, a man being slandered by another should have the courage to speak out plainly in regard to the insinuations. This correspondence between two members of the American Poultry Association taken altogether is deeply to be regretted by the whole fraternity of fanciers in the American Poultry Association.

HENRY HALES.

I have read the letter from Mr. Rankin and from Mr. Hallock published in your issue of April 1st and think you did a fair, impartial thing by publishing both letters as it gives your readers a chance to learn both sides of the question and form our own opinions.

H. S. THOMPSON.

* * *

To the Editor:

During the past year the American Poultry Association, through its Educational Committee, and with the assistance of many individual members, has been trying, and, to a great extent has succeeded in getting the Agricultural Colleges to recognize the importance of the poultry industry. Is it any more than fair that we return the favor, and elect a poultry instructor from one of these colleges to the executive committee of our association?

It is a pleasure to me to recommend Professor Horace Atwood of Morgantown, West Virginia, and I trust every member, who is anxious to see the poultry industry given the same recognition by out Agricultural Colleges as is given to dairy and horticulture, will not only vote for him, but try to get other members to do likewise.

Yours sincerely,

C. K. GRAHAM,

Professor of Poultry Culture, Connecticut Agricultural College.

* * *

Andrew Carnegie Imports Minorca Eggs

They were O. K. outwardly, but N. G. within. Mr. Carnegie has been anxious to raise some Minorcas, so when several weeks ago, George Irving had to go abroad, Mr. Carnegie asked him to bring back some Minorca eggs with him.

Irving got back on the Cunarder Lucania with eighteen fine Minorca eggs. His baggage was examined on the pier by Customs Inspector "Sir" Rowland Story, a well-known Minorca breeder. Story is a strong believer in America for Americans, and lifted the Minorca eggs from their resting place with extreme disfavor, but as he inspected them, a pleased look came over his face.

The Lucania had a rough passage and the eggs were shaken by the violent moving of the ship. To outward view there was nothing the matter when the inspector found them in Irving's trunk. The shells were not even cracked, and each one was wrapped in cotton batting, yards of it. Inspector Story unwrapped a few yards of cotton from one of the eggs and held it up to the light. His experienced eye showed that the eggs were addled. The trouble with the eggs was due to the storm. There had been much pitching and tossing of the steamer, and the rough weather had upset the eggs' inwards. Some of the storms which this steamer encountered would have given a sea gull's egg some uneasy moments, and as for the product for a land-loving, Scotch Minorca hen, the voyage was too trying. About the third day out the eggs must have given up. Their great yokes burst in silence.

Thunder sours the sweetest cream. The approach of Spring saddens the oyster and makes him shun the company of men. Why? All looks fair without, but things are not well within. So it was with Andrew Carnegie's eggs. And to-day there is grief in the heart of the giver of libraries.

* * *

The American government customs classifications of frogs' legs is "dressed poultry." The Cuban custom officials are asking the question, "What is a turtle?" A "Reptile" or "Animal." Under the animal classification the duty is very high, therefore it is desirable to have it assigned to the reptile class. It is suggested that the Cuban officials doubtless had before them in making the classification, the ruling of the American Government in classifying frogs' legs as "dressed poultry."

Heuvelton, New York Show and Woonsoket, R. I. Show have engaged Mr. Henry R. Ingalls to judge at the next exhibition.

* * *

KENTON, Ohio, March 21.—Mrs. S. O. Burdette was killed by a gun contrived and set to shoot thieves who might enter the chicken coop. The gun was fixed with a string fastened to the coop door, so that when the door was opened the gun would be discharged. Mrs. Burdette went to gather eggs and forgot about the gun, and was killed instantly.

* * *

CANARSIE, L. I., N. Y.—The Health Department some days ago decided that Mendel Rudolph must have a permit to maintain his Goose Farm at Skidmore Lane and 95th Street, and sent Officers Gallup and McCann, it is claimed, out to attend to the matter. As a result, Rudolph was arrested and taken to court, where he was held for examination. "It's the continual quaking of the geese that is complained of," said McCann.

"How many residents are there in close proximity to the farm?" asked Magistrate Furlong.

"Two," replied the officer.

Officer Gallup said that it was the quaking of the geese that caused the trouble.

The Court decided that there were not enough residents in the vicinity of the farm for the geese or anything else to seriously annoy, and dismissed the complaint which had been made against Rudolph.

* * *

Middletown, Conn.

At the annual meeting of the Middlesex County Poultry, Pigeon and Pet Stock Association, the following officers were elected for the ensuing year: President, Charles R. Corey; First Vice-President, S. W. Starr; Second Vice-President, W. H. Shute; Third Vice-President, W. J. Kieft; Fourth Vice President, C. D. Armstrong; Secretary, A. L. Clark; Assistant Secretary, Chas. L. Fisk; Treasurer, F. H. Smith; Auditor, John L. Fisk; Superintendent, W. A. Pease. Executive Committee: John L. Fisk, Thomas Pedden, Wallace Pierson, Alex McArthur, O. D. Shultz, J. E. Mead. It was voted to hold the next exhibition, January 5th to 8th, 1909. W. R. Graves and C. W. Bunnell will act as judges. O. J. Bailey of Bristol will do the cooping. It is the intention of the members of the association to make this their sixth annual show the best yet, which means one of the best in New England.

* * *

Schenectady, N. Y.

At the anual election of officers, April 2d, of the Electric City Poultry and Pet Stock Association, the following officers were elected: President, Dr. A. T. Sitterley; Vice-President, E. T. De Graff; Secretary, R. Brook Robbins; Treasurer, William Smith; Superintendent, I. L. Whitmyre. Great interest was shown by the members in a banquet to be held at Amsterdam, N. Y. The object was to better acquaint the fanciers in that section with each other. This election makes the sixth time Dr. Sitterley has been elected president. December 7 to 12 are the show dates. Now, don't forget the dates, but be sure to attend and enter a good string of birds, for it will be a good show and a good city to show in.

Clifton Park, N. Y.,
March 31, 1908.

LEONARD W. LOTT & Co.,
New York, N. Y.

DEAR SIRS:

You have wonderfully improved THE AMERICAN FANCIER. Further more, your show reports are worth more to the fancier than several times the cost of your paper. I also like the way you report the winners; if they are not worthy you do not use "white wash" and make them out ideal to fool the public.

Very truly yours,
ELMER BOYCE.

* * *

Philadelphia Show

Will be held January 19th to 23d.

The Pouter fancy will probably be surprised to learn that Mr. Geo. Ewald has purchased the entire stud of Pouters from Robert MacSymon, one of the leading Pouter fanciers in England.

For many years, Mr. MacSymon has shown successfully at the leading English exhibitions.

In the lot coming to America there are 99 birds, not the cull or stock birds, but the entire collection, which has taken years to bring together. We are glad to make note of this purchase, which will probably add renewed interest in this particular variety.

There is no doubt a fine collection of Pouters still exists in both this country and Canada, and it is with these owners whether or not they shall meet in the exhibition pens of our shows next season. Mr. Ewald should receive the shipment during April and after a short rest they will probably grace the American breeding loft.

* * *

The question of in-breeding is often times wrongly taken.

The matter of mating birds closely related, is in a sense in-breeding, but unless the parent birds possess valuable points and plenty of them, it is a bad mistake to pair closely.

Two points are much affected by pairing closely related birds, length of feather and size. Where these are not desirable it can be done with more success. The vitality is generally reduced, but only after two or three generations. In-breeding is not the matter of a season or two, but the establishing of certain desirable points in your stud and to fasten these points in your strain.

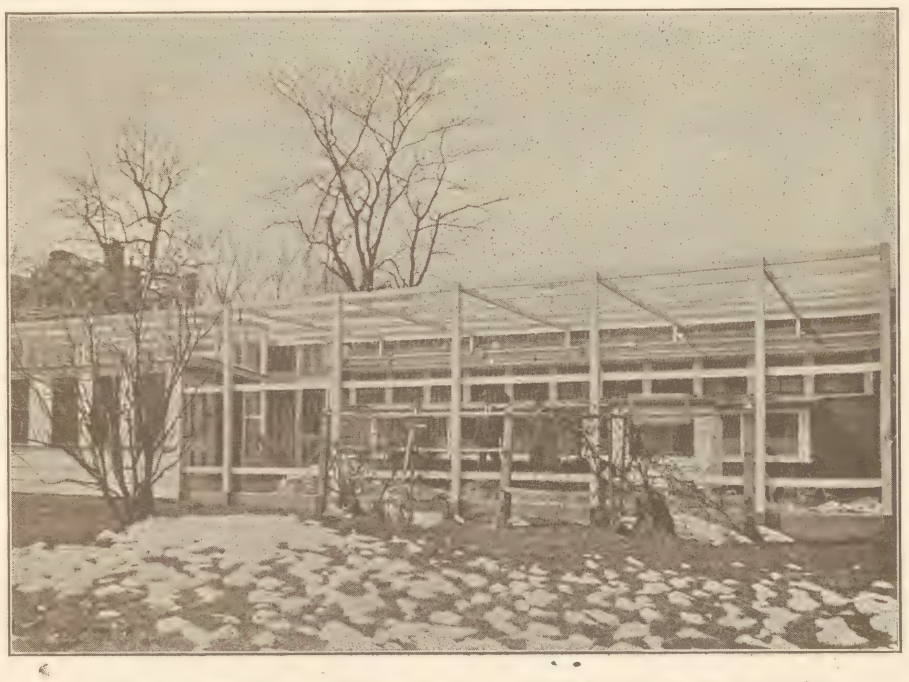
In the perfection examplified in every stud that has been built up to predominant excellence by the art of the successful fancier, there are always two factors evident to the practical observer. These are blood and care. The best of care is wasted, apart from the application of judgment in breeding, and the best of blood can soon be deterioated by carelessness in management, but good management, working on good material will accomplish much.

We have seen the start in the fancy made with the best blood obtainable, price not considered, and within two years the stud completely ruined by mismanagement.

It might be interesting for our readers to know that the first historical mention of pigeons was made 3,200 B. C. It appears upon a stone tablet bill-of-fare, mentioned among the delicacies. An inscription on the stone gives a fair likeness of the pigeons of that early time.

By history we see the squab industry was the beginning of the pigeon fancy. Just what particular crosses were used is not stated. But nevertheless, the fancy owes the squab industry a great deal.

* * *



We understand a new party has appeared in the field to manufacture the official American Pigeon Club bands, with the exception of the muffed varieties. The band question in England has been settled. One manufacturer is given the contract and there is little or no trouble thereafter.

Mr. Whitney has worked hard on the band question, and although fanciers in general have received their bands in due time, the quality and workmanship have not been up to the standard set by our English cousins. In years past, considerable trouble was caused by the non-delivery and forced many to place their orders with the English manufacture. During the past ten years we have ordered many times from abroad, and strange to say, always received our bands in about three weeks, considering the length of time necessary for transportation of mail, it is quick delivery.

* * *

Many, at this time, have their first round of youngsters on the floor, and some idea of your matings can be made by their appearance, especially regarding color and markings.

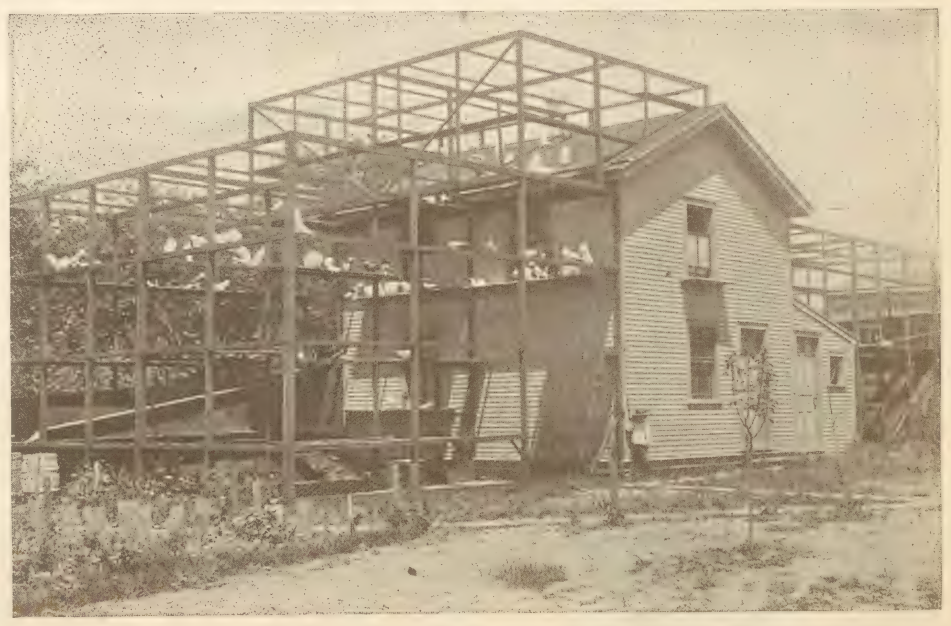
If the young don't come up to expectations don't be afraid to break up the old birds and re-mate. The necessity of two or more breeding quarters is more apparent, you can re-mate and change lofts with safety. Some believe the second round will probably be better, and although this is sometimes the case, the wiser plan is to try another mating.

A WELL BUILT SINGLE STORY PIGEON LOFT AND AVAIRY.

* * *

Beware of over-crowding, especially during the breeding season a loft which will hold comfortably, say 20 pairs will give better results if that number is bred than if in the same space the fancier tries to breed 30 pairs and at the end of the season you will find you have more youngsters although from less pairs and better health among them.

* * *



PIGEON CULTURE.

There is not the slightest doubt that nearly everyone entering the Pigeon Fancy has to buy his experience, and if he is an enthusiast he buys it very dearly. My advice to any novice is to proceed with great caution. Advice is often given, but rarely taken. A man who has never kept pigeons should try with a pair or two of very ordinary stock birds, and watch the youngsters brought up. He should learn all he can of the birds' habits, and then buy a couple of pairs of real good ones. What he wishes to do is to be like his friend, and win a cup. He, therefore, writes and answers an advertisement, buys a pretty and showy aviary. He is persuaded to buy several pairs of birds at a good price. He perhaps gets hold of a true fancier, and gets full value for his money, or he buys off a dealer, who knows he is a novice by the tone of his letter, and so asks an outside price, and obtains it. But it matters not, the money is, as a rule, thrown away, despite the quality of the birds. The latter are placed in the pretty, useless aviaries. They have clean water each morning, and enough corn to feed a horse. The consequence is, the birds are soon of no value.

I often think, Mr. Editor, what a boon it would be to the Fancy if you had a book in which good designs and specifications of houses were given, with the number of pairs they would be capable of holding, and for which breed they would be suitable.

The pens must be placed where the sun can get on them, not necessarily shine into them. For instance, it is bad for the birds to be placed against the north wall of a house, for the pen is shaded the whole day, and although it might keep dry, yet it never seems healthy, and in cold weather, such a pen seems always very much colder, even if one enters it late at night, than those pens that stand in the sun. I have sun avaries, bought by enthusiasts, that are very pretty and so nice on fine days. But in wet or stormy weather, they are positively useless, and when frost or snow is about, the birds have no shelter. It is no use thinking of keeping show birds in such places.

There has been a great deal of discussion as to the correct time to begin breeding. Now this depends entirely on what birds one has, and at what time the birds were separated the season before. An early start should certainly be made, but for a novice who has only a few pairs of good birds, and which he would not care to lose, it will be quite early enough to pair up at the end of February. The fancier who has about thirty pairs, will, no doubt, risk a few pairs of his stock birds about the first of January, and if the weather is favorable, he will do quite well. The trouble is, however, when the severe weather comes on only too unexpectedly.

A two-story Pigeon Loft and Avairy, giving birds plenty of light and flying space. Courtesy Pigeons.

Feather Color in Pigeons.

All pigeons, whether dark or light colored, have the characteristic metallic sheen on the head and neck, and sometimes the breast (in a few varieties, it extends practically all over the body) all colors of the rainbow occur here, and William Brown wrote:

"That none can say, though he it strict attends
Here one begins, and there another ends."

The principal colors are Blue, White, Black, Yellow or Red, all others are mere shades or mixtures.

Blue: The real, original color of the wild pigeon. The Blue requires certain shades and markings, without these it rarely exists. In a blue-colored pigeon you will find the head and part of the neck blue-grey, further along the metalic lustre occurs, which gradually diminishes, and finally disappears as it approaches the chest and back, a lighter blue tone showing for the body, getting lighter towards the tail, often going into white at the end of the back, the tail again is darker, like the head, with a black tail bar about half an inch from the end, and the end itself again blue, the wings and shoulders really are the only part that show the correct blue color.

Black: Genuine, ideal black can only be a deep velvety black with no vissible tint of any other color, particularly faulty is blue-black, and any variation from a dark to a light black on various parts of the body. The reader will find various shades of black-blue, brown, slaty-grey, purple-violet, and green-black, all these originate either from inbreeding or mating of different colored birds.

Yellow—Rust-yellow.

Red— Red-brown.

Yellow appears in various shades, from deep, rusty-yellow to a pale, almost creamy-white.

Red: Reddy-brown, copper-red, to red-grey.

These colors are so closely related that no distinction should be made and more attention should be given to breeding the birds with uniform shade all over, variations in shade on one bird are more faulty than the color itself, deep colors, of course, are most desirable.

White: This color originates through the entire disappearance of the colored pigments, that is clear white without any tint of what-ever shade, technically white is colorless. There are two whites in pigeons—Albino White, or White of the first order, with red or light iris and Splash-white, or white of the second order, with brown iris. A white colored pigeon should be white and no other color is admissable, frequently tints of silver-gray or yellow appear, these should be eliminated.

In addition to the above, there are, of course, a great number of intermediate or mixed colors sometimes very pleasing, depended largely on the predominent color of the parent birds.

The Age of Pigeons—How to Tell The Age of a Pigeon.

The age of a pigeon can be as long as fifteen years, and has been known to exceed twenty, ordinarily it seldom exceeds ten, as the trying time of the moult generally kills it at that age.

To tell a pigeon's age there are various ways and marks; it is easy to tell the age of a young bird; first, when it is, say two weeks old and the color of the feather begin to show, four to five weeks old when it leaves its nest; three to four months old when it stops to squeak and begins to coo. The endings of the first change of feathers falls into the fifth month, provided the bird is not hatched too late. After the ending of the first moult, the birds begin to show their sex, and the bill wattle begins to get white, this does not occur in younger birds, and usually the larger and whiter this wattle gets, the older the bird, real old birds show wrinkles all through it.

A Frenchman, named Samin, claims to have discovered the following method: "Take any pigeon in your hand and spread either of its wings out flat like a fan, showing all of the twenty wing feathers, the first 10 longest, or primary wing feathers change with the moult yearly and grow back to about the same form and size; the next ten, or secondary flights also moult, but grow shorter each year, and only one at a time, beginning with the 11th feather from the end of the wing, or else the first of the ten secondary feathers, thus a bird one year old will show feather No. 11 about ¼ of an inch shorter than the adjacent feathers, deviating that distance from a fairly even line of the entire wing. The second year No. 12 will grow proportionately shorter in a similar manner, followed by the others, one each year. Thus a bird 4 years old should show Nos. 11, 12, 13 and 14 shorter than No. 10 or No. 15.

About this claim, I will say that various birds proved this contention easily, while others it was difficult to verify it correctly, all the birds, of course, being banded to preclude false conclusions. At moulting time this would also be uncertain, as several of the feathers may be missing at one time.

The best and most reliable way is to have your birds banded with an approved band, this will give you the correct age record and will be at the same time a protection to the buyer.

THE IDEAL SQUAB BREEDER

Your Pigeons will do well if you give them FOUSTS HEALTH GRIT, in use for 18 years

A preparation necessary to the digestive nature of cage birds, combined with medicinal properties that insures health and sturdiness. Most all the large pigeon breeders use it and one says "of course, there are lots of other grits cheaper, but there are *none as good as Foust's.*" No other grit or medicine needed. Send for free sample and watch the pigeons eat it.

$2.00 PER 100 LB. SACK, F.O.B., CAMDEN.

Explain the quality of the birds you have for sale to a large audience, of well-to-do poultry men and doubtless you will make many sales.

an Ad in

talks to an immense audience of successful poultry fanciers, many of whom are wealthy men who breed merely for pleasure and who subscribe to this paper only. They are big spenders and if the quality of the stock offered is worthy of their attention we know of no better place to advertise it than in THE AMERICAN FANCIER.

In addition to the thousands of fanciers who subscribe to this paper we have thousands of readers who are beginners and just starting to raise poultry.

Ideal Aluminum

LEG BANDS for Poultry and Pigeons are the acknowledged leaders. Firmest and most secure lock. Guaranteed to **stay on.** Price, post-paid, 12 for 15c; 25-25c; 50-40c; 100-75c. All supply dealers sell them. Sample band and B. P. Rock circular sent for 2c stamp.

Frank Myers, Mfgr., Box 67, Freeport, Ill.

To encourage Tippler flying, I offer $10 in gold to the fancier doing the best fly with youngsters bought of me in 1908. Send at once for free breeding list, giving full particulars about the best stud of high and long flying Tipplers in the world. I have bought the champions of England and birds I have sold have bred the champions of America.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

President, American Houdan Club, From 1900 to 1907.

The American Fancier

AMERICAN MARKET DUCK CULTURE

Written Expressly for the American Fancier

BY

THEO. F. JAGER

The houses needed for harboring breeders and growing youngsters, as well as brooding, etc. houses, should be built under the same general principles as covering hen-house architecture. I shall refrain in these columns from giving materials, etc., needed and confine myself to a general description of what in the opinions of practical breeders has been found to be the most practical, as well as cheapest system. The last decade, that has seen such phenomenal changes in the manner of housing hens, has not omitted to leave its traces in duck culture. Where formerly old and tried duckmen deemed it best to house their breeders closely in winter and during stormy days, we find the same men today true adherents of the now universal law to give as much fresh air at all times as possible. Houses that were formerly shut tight at night are today endowed with liberal muslin or burlap curtains, and in that way furnish the inmates with plenty of health-giving oxygen, even during the close, short days in winter. We cannot too strongly recommend these curtains for any and all conditions and climates. If the house is built of the right height and has the proper number of birds as inmates, it will produce better results with burlap curtains in use summer and winter as without them. The old way to ventilate by raising a sash a few inches, when the temperature rose, is but a very rudimentary way, and any unforseen changes in the weather at night might raise havoc with results. Outside of this, a changing wind and rain or snow falls might dampen the inside and the bedding so as to make a renewal necessary. A curtain covering one-third to one-fourth of the south side of a building built on a square-floor plan would be ideal in temperate climes. More curtain in warmer climes or especially warm exposures and less curtain in cold localities or on houses built on the continuous plan, where the individual pens are broader than they are deep, would be about right. Ducks do not require as much sunlight as hens, as they are naturally out of doors most of the time, and sunlight-admitting sashes should be as few as possible, provided, however, that the house must not be dark in medium daylight in winter, nor should it be made impossible for the sun's rays to strike all portions of the floor space during some time of the day. We have no better, cheaper and quicker disinfectant than sunlight. Bear this in mind while studying up the sash problem. The happy medium must always be maintained. Enough glass to admit light and sun, and not enough to allow too much valuable and costly animal heat to escape during cold nights.

The cheapest duckhouse is always the best, if it is tight against wind and weather. It saves in interest on investment and saves in cost of maintenance. Double walled houses lined with paper and those often so highly spoken of "dead-air-spaces" are a nuisance for ducks. Ducks do not appreciate them and don't need them. Any single walled shack free from cracks, knot-holes, nail-holes and protected by a water-proof roof will do the work to the queen's taste, as the saying is. Build is as low as possible and in conformity with the height of the man that is going to do the work. Low houses are always the warmest houses. A one-pitch roof is the cheapest. I personally prefer for roofing shingles good redwood or cedar shingles, and in second line any of the many advertised roofing papers that do not need a coat of something every year or two. Make haste slowly before leaping, and investigate all claims of the manufacturers and find out for a certainty that the paper selected does not need a refreshing with a costly paint or liquid every so often. If you do not bear this in mind you will be nothing more than an improved tar roof adherent, one who has always to stand the expense and worry to look after his roofs, not counting the dire results that dripping tar, etc., may have on the birds.

Breeders differ as to the best exposure for the one-pitch roof. Some, and most of them are living in the colder sections of our country, advocate and use houses having the roof facing the south or southeast, in whatever direction the building may be laying, because the snow often forming a deep and heavy mass on same will, because more directly exposed to the rays of the sun, melt quicker and in that way relieve the strain on the roof sooner than if faced to the north or northwest. I have seen houses with roofs exposed to the north so thickly covered with melting snow that the weight forced the centers of the building over ten inches down. Prompt action was necessary to save the building, and we might say the yearly duck crop, as a change to other quarters would have set the breeders back in the egg production and the consequent loss of early large profits would have been felt severely by the owner. All hands had to work from noon till the coming night frost made a stop, shoveling the heavy, wet mass down. The building was saved, but at an expense of cracked roof boards and general loose-jointedness.

Against the southern pitch roof we hear complaints of drawing too much heat in summer and of not admitting enough direct sunlight in winter because the south wall is low, when the sun stands low in the heavens. This is perfectly true.

We have overcome both complaints and at the same time have given a just ear to the Northern advocates by making a hip roof, the southern leg of which is to the northern leg as four to one. In this roof four-fifths of the roof is amenable to the warm rays of the snow-melting sun, the south front is higher than in an all-southern-pitch roof and can in consequence admit more light into the interior and the northern wall is lower, generally by about two or three feet. All in all I consider this the best house, although a trifle higher in cost. The duckman having an aesthetic taste will certainly prefer it to the shack style at any time, especially as the one-fifth part of the roof, exposed to the north, because so closely studded, will never give way under snow pressure.

Another point in its favor is the fact that the attendant can enter and walk through the entire house nearer its actual center while renewing bedding or gathering eggs than he otherwise could in a "just-high-enough" house. This point may seem of trifling merit to the beginner, but when it is taken into consideration how many years a house will last, how many visits a man must make through it, the saving of even a single hand-turn will amount to considerable.

The door should always be placed in the east. Less wind, less snow drifts and less change of inside temperature will result than if placed on the north or west. The south side is generally taken up with windows, exit holes, etc., besides being often too low to admit a fair sized door. It should, of course, open to the outside so as to get clear of the bedding. The windows should be hinged on top of inside frame and be able to be hooked onto the roof rafters in very warm weather. An extra one-inch mesh wire should be there to keep night prowlers from getting in or ducks out. The exit holes for the ducks should be not less than twelve inches high and at least two feet wide. Ducks like to bunch and are apt to crowd and injure themselves while going in or out, if the hole is too small. Hinge it on top and be able to hook it against the wall from the outside. Avoid all sliding door arrangements as they will not work when tight fitting, in frosty weather or when a little dirt gets between them. Let the exit hole covers lap over two inches against the outside wall into a frame of a two-inch piece and they will be as tight as wanted and needed. More trouble has often been caused by small exit holes than by all other detracting agencies combined. The best feed and care is wasted on the best kind of stock if the birds are exposed to a rough and tumble getting-in or getting-out of the house twice daily. I was called once by an embryo-duckman to investigate what ailed his ducks. They did not lay in March with the best of feed and care. The stock was all right, I knew. I went over to his plant and as I came late at night we talked and I tried to hunt the cause by questioning, but could not elicit a satisfactory explanation of the trouble, as he seemed to have done all any good man would have done. We deferred the matter till the next day and I asked him to do his day's chores just as usual and I would keep tab on them. I had not long to wait for the solution of his trouble. He mixed his feed right, but when it came to feeding, he first let the birds out and then daylight began to dawn on me. Such a struggling bunch of birds that were trying to get out and that were at the same time afraid to get out, because they had been injured or bruised some time or other while getting in or out, I never saw before nor since. He added to the general fright by rushing about to accommodate them all at once with feed and this excitement kept up daily caused all the trouble. I had him cut the exit holes larger, told him to first place all feed in the troughs ample in number to accommodate all ducks at one time and then to let them out without rushing about. In a few weeks I got a letter from him saying his birds were a different lot and had begun to lay. They looked better and the end of the season found him only a little short on the right hand side of his ledger. He would have made a good penny, if he had done things carefully without rushing the birds and keeping them always in a stew. Another season proved he had learned a lesson in the costly school of experience that he thereafter heeded.

Raising Little Chickens

R. B. SANDO, Potsdam, Ohio.

THE grass is starting, the trees are putting forth their leaves and blossoms, and all Nature is awake to the need of growth. This will very likely be the banner month of the year with regard to the egg yield and the number of chicks hatched. And the most important problem that requires the attention of the poultryman at this time of the year is, how to successfully rear his chicks. Having had ten years' experience in the poultry business and having hatched and raised many thousands of chicks during that time, perhaps a little experience and suggestions from the writer will not be amiss.

We never disturb chicks, either in the incubator or under the hen, until they are well dried off and exhibit a marked desire to move around. Then they are removed to the warm brooder, or if hen hatched, to a dry, comfortable coop which has previously been prepared for them. The brooder should be heated up to about 90 degrees under the hover, and then when the chicks are placed in it the temperature will rise from five to eight degrees, which I have found to be about the correct temperature for the first two days. This may seem a little bit high to some, but I am firmly convinced that a great many more chicks die the first week or two from lack of heat than from too much heat. Chicks are delicate little creatures at first and must be handled very carefully. Of course, there is such a thing as too much heat for best results, as the chicks will be weakened and debilitated by an excessive temperature if long continued; however, as long as the hover temperature does not get above one hundred degrees everything will be perfectly satisfactory. We gradually reduce the brooder temperature a few degrees each week, until at the end of the first month the thermometer should not register more than 80 degrees for the stoutest, hardiest chicks.

We never feed chicks until they are at least forty-eight hours, and very often not until they are sixty or even seventy-two hours of age. This is not a hardship as may seem to the inexperienced, but really is the best kind of treatment the chicks could receive, as Nature has provided the yolk of the egg to support the life of the chick for the first few days of its existence. At the same time we give the chicks their first meal, we also place grit and charcoal—a little of each—before them and let them help themselves as they will not overeat of these materials. An hour or two later we place a drinking fountain filled with soft water (rain water) before the chicks, and from this time on keep water *constantly* before the chicks I have found that they are not nearly so apt to over drink themselves if they have water before them all the time, as they are if water is offered them only at intervals when they will load up with all they can hold.

Nothing but dry food should be fed little chicks. We use a prepared chick feed, and at $2.50 per hundred pound bag, it is as cheap as anything we could use and get the same satisfactory results. This prepared stuff is especially valuable to the beginner, as it does away with all the bother and uncertainty of "balancing" the rations one's self. Some people commence to stuff their chicks with sloppy, slushy and sometimes sour messes as soon as they are hatched. The chicks can eat this kind of stuff very rapidly and so they are given all they can hold. It is little wonder that these chicks become ill with bowel disorder or some kindred disease, droop around a few days, and then croak!

Keep the chicks busy and hustling for all they get to eat; never feed grain on a bare surface. This is the surest and easiest way to insure strong, rugged chick that will not be falling ill with "leg weakness" and similar ailments. Scatter all feed in a litter, making the chicks hunt and dig for it. The litter should be about two inches deep for chicks not over a month old, and composed of cut straw or hay, or chaff from the hay mow. Sawdust I do not like very well for this purpose, as the chicks usually eat more or less of it and sometimes with bad results.

A constant supply of grit is, of course, very necessary. Without it chicks cannot properly grind and digest their food. Coarse sand will do very well for the first five days or a week, but after that some coarser material must be provided. Keep a little charcoal also before the chicks where they can pick at it whenever desired. This may save you a lot of trouble with bowel disorders, as it is one of the best "correctors" for poultry there is in existence.

Of course, animal food and green food are very essential to the most rapid and thorough development. Green cut bone and ground beef scraps are very important in the ration. Chicks probably relish the bone more than the scraps, but either one is good. If the latter is used, the scraps may be kept in a self-feeding hopper and kept before the chicks all the time. For green food, almost any kind of vegetables or grasses are good. In fact, one usually is safe in feeding anything of this kind that the chicks will eat with relish. Lettuce, cabbage leaves, etc., all are very excellent indeed, and are a great aid in keeping the chicks growing and contented.

Drinking fountains are very much superior to pans and troughs as drinking vessels. Give fresh water at least once a day, and twice would be better, pouring out all the old, stale water and replenishing it entirely with fresh. Scald out all drinking vessels once or twice a month.

The coops and brooders must be kept clean and perfectly sanitary or the chicks will not thrive properly. Filth, no matter whether in the brood coops or yards, will sooner or later bring disease and loss; therefore, keep everything clean.

Lice and mites must be watched for very closely and persistently. No matter how strong and vigorous a chick may be, it can't successfully withstand much of an attack from these pests. Grease very young chicks with a mixture of melted lard and coal oil. After they are two or three weeks old, use louse powder. The coops also need attention. They are infested with a different kind of louse from those on the bodies of the chicks, and insect powder has no effect upon these. Use one of the advertised liquid lice killers, or common kerosene oil, painting or spraying the coops with it thoroughly.

* * *

It is much easier to take advice on faith than to think it out and see if the advice is good or bad. Many breeders read unreliable information published in reference to poultry culture and believe in it, whereby if they would only use a little thought they would readily see that the information or advice would be more harmful than good.

Open Lacing in the Silver Wyandottes of the Present

By DR. H. A. LITZENBERGER.

It is just about six years ago when the wide open-lacing in Silver Laced Wyandottes embarked upon our continent from the British Isles. Everybody became crazed over open-laced birds. On the contrary, I continued to breed the original variety, but what happened to me when I entered the contest in a show, was that I was knocked to pieces, not because my birds had type, but because they were lacking the open lacing. What had I to do, provided I desired to stay in the game? Why, I had to discard my typical birds, and get possession of the open-laced or English variety. I did so and am breeding the English variety to the present day, having some very nicely laced birds. But as stated previously they are deficient in type, etc. They are not of the type that our original Silver-laced Wyandottes were and are, and I must say, that all the shows that I have attended of late years, which include Madison Square, Wilkes-Barre, Allentown, and several others, I have seen mighty few Silvers both males and females, that were of the type of the originals, except a few which, of course, showed the blood of the originals and which could be distinguished by the lacing. Here let me make the remark, that the judges were to a great extent responsible for the destruction of type. They more so were crazed over the open lacing. And wherever we were in a show it was those open-laced birds that won the blue, and no attention was given to type. The only qualification outside of color was the rose comb. No matter whether they had the shape of a Leghorn, Langshan or a Sebright Bantam, or a turkey as some express them, they carried off the blue.

It then happened that about every person interested in the Silver Wyandotte took up this modified or English variety, for we as breeders were urged to do this, provided we desired to stay in the game. Now then, to sum up, what was the result? We had birds with long legs, long necks, long backs, with an unusual narrowness of both body and head. The cushion on the back was absurd in many birds. The fluff was not as prominent as in the original variety, and color of this section was also frequently at fault, instead of slate it was too light. The tail was carried at an improper angle which may or may not have been due to the absence of the cushion. In fact it was or is a bird without curves. The only part that it could be distinguished as a Wyandotte was the rose comb.

While we are breeding this English variety at present, I say now contrary to what I stated in the Fancier Gazette let us continue to breed these open-laced birds, giving, however, special attention to type. Do not discard of a bird that is good in lacing for one that is superior in shape. If you do you will injure them again. In the show room, if two birds are equally well laced let the one with best type take the blue, but in case one shows better lacing than the other which may be greatly superior in type, I say let the former win. For goodness sake don't turn somersault again and let the bird with best type win over a better laced bird. I say that while we are breeding the open-laced birds at present, let us continue to do so, and I believe that by judicious breeding we will get the type of the originals in a few years to come. We undoubtedly have some birds with this open lacing in the yards of some breeders, that show pretty good type but they are scarce.

As in regards to the qualities of this new variety, I believe there are some in which they are superior to the original. As they are not as blocky, they are not as apt to get fat as easily, and consequently I consider them hardier, better foragers and subsequently better layers. My experience with the original silvers was that as they were very blocky, they were easily fattened and especially so if they were confined where they could not take the advantage of foraging. This very fact interfered greatly with their egg production. They are therefore better adapted for our village and city fanciers. As broilers I consider the originals superior, because as stated above, they can easily be fattened.

In conclusion I would request the breeders of silvers to continue the English variety, but give especial attention to type, and we will get there after awhile. Do not be in a hurry; take it easy.

* * *

Although ducklings can be reared more successfully with sufficient water for drinking only, for the breeders a pond, stream, or marsh is to be preferred, though not an essential to success, especially if the ducks have been bred without bathing water. The latter, however, is a decided advantage (though not for ducklings intended for market), as in pond, etc., ducks find much suitable food. Bathing also stimulates exercise, which is an absolute essential to health and vigor, keeps the birds in better laying condition, and more ducks can be kept to each drake, as they are most easily mated. It is, however, the experience of many duck-keepers that, contrary to the generally accepted opinion, it makes little difference in the fertility of the eggs whether the breeders have water to bathe in or not, especially if they have been bred without it and have a sufficiency of drinking water and ample cool shade into which to retire in warm weather, this latter condition being of very great importance.

Residence of Mr. J. Coy Roach, Girard, Ill., Proprietor of Oakview Stock Farm, where the Cronish Fowls are bred to Perfection.

FIGURE 1 "BEFORE USING"

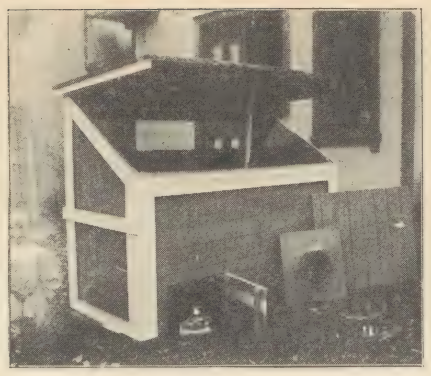

FIGURE 5 REAR VIEW

A Combined Brooder—Colony House

By W. E. ADAIR, Cohocton, N. Y.

WE have all noticed from time to time, various attempts to utilize the common piano shipping case in the construction of poultry houses. Almost invariably they are crude, bungling, unsightly, and fairly disgraceful in otherwise respectable surroundings. They seldom are worthy or creditable—frequently a veritable eye-sore, in fact.

Having been in the piano business all my life, possibly I may have a more wholesome respect for the piano box and its possiblities than has the average individual or layman. From my own experience, the piano box as a poultry house can be made ornamental as well as useful—an actual attraction to the appearance of the lawn or poultry yard instead of otherwise.

Figure 1 of the accompanying photographs shows the ordinary piano shipping case "before using." These boxes do not vary much in shape or size, although the quality of the material and workmanship varies greatly. Care should be taken in selecting those boxes which contain good, sound lumber, put together in a workmanlike manner.

The first operation is to saw off the top of the box diagonally for proper slant of the roof, on a line drawn from the division of the upper and lower parts of the front, to a point near the top at the back, as shown by back line in the engraving. This makes the front of the box the back of the brooder that is to be. Then remove lower part of front and mark with a pencil around inside corners of bottom of box, after which knock off bottom and saw off edge on all four sides at pencil marks. The object of this is to bring bottom of box up inside the proper height, placed on well-nailed cleats, to provide for heating apparatus, etc.

THE HEATING APPARATUS.

In my own practice, I have devised a heating apparatus which after several year's use I have found entirely satisfactory. I have also used successfully the "Universal" hover outfit, it being particularly adapted to this style of piano box brooder, and is easily removed after chickens outgrow need of artificial heat, thereby leaving entire floor space for the constantly increase need of the chicks for roosting quarters, and as a colony house proper. Roosts are not necessary—in fact, it is considered that growing chicks are better off without them until fully developed and removed to permanent quarters or laying houses. The "Universal" hover outfit requires that the top side of bottom box be raised just seven inches from bottom edge of box, in order to provide for hover arrangement, lamp, heater, etc. The printed instructions accompanying this outfit from the makers renders it a simple matter for any one to properly prepare the box and attach the hover.

Figure 2 shows the piano box "after using," with the "Universal" hover outfit attached, the brooder all closed up for the night, or as against a storm or the severely cold weather in the early spring months.

Figure 3 shows a little different style brooder when opened up for cleaning, airing, or for hot weather.

It will be noticed that the large front window in Figure 2 swings out from the top. In that end of the box which would be to the east when properly placed, is a window about twelve inches square, allowing sun light in early morning to cover the floor of brooder outside of the hover, in feed and exercising room. Plenty of sunshine is of great and vital importance to very young chicks, same as with all other animal life.

Back of large, front (south) window is a removable frame, the size of the window, covered preferably with half-inch mesh wire netting, to keep out the numerous four-footed enemies of chickdom. The large, upper swinging door or "hood" with wire netting over the opening on the inside, admits sunshine for purifying the house, and is also for free circulation of air. A three-inch hole on either end near top, covered with fine wire screen, with galvanized iron slides, afford ventilation under regulation of the attendant.

FIGURE 2 "AFTER USING"

ANOTHER STYLE PIANO BOX BROODER

Figure 4 shows a little different style of colony-brooder, in which I construct a home-made hover and heating outfit of my own device, which works admirably and offers some advantages in first cost. The lower floor in box is raised up inside about ten or twelve inches to provide for lamp underneath. It also forms a basement room, which is very useful as a haven of refuge for the chicks during the sudden thunder showers which spring up with little warning in the early spring and summer months. Ordinarily the chicks would all try to get in the brooder at the same time, which of course is an impossibility, resulting in the greater part of the brood getting a drenching, with all its disastrous results and attendant evils well known to poultrymen. This compartment also makes a dusting room, and a cool and shady retreat in the hot and sultry days of mid-summer. For the first few days the door to the basement compartment should remain closed until the chicks become accustomed to going in and out of the brooder. Otherwise at night "chicken sense" would mislead many into going under the brooder instead of inside as they should, thereby getting chilled if not indeed losing their lives before morning when not discovered in time and put to bed properly.

Figure 5 gives a rear view of this brooder, roof raised, removable floor section under hover compartment (heater shield attached), also hover board, removed. The heater drum over lamp in Figures 3 and 4 is not removable and is of a common type quite familiar to poultrymen. A tube is provided through which fresh, pure air from outside is conducted into a reservoir over lamp, where it is warmed, and thence passes into brooding chamber, which is necessary for the health and comfort of the chicks. Curtains are hung down from hover board around heater drum, falling down about a half inch from the floor, with half-inch round holes cut in the cloth near top, to allow exit of foul or over-heated air from hover compartment. A slitted curtain also hangs over entrance to brooding chamber. Small windows on two sides of brooder furnish sufficient light in outer or secondary compartment under hover, to enable chicks to see feed and grit on floor first day or two, before they are old enough to be allowed very far from hover chamber.

About four one-inch holes should be bored near bottom of box in basement section, in front and in end farthest from lamp, to allow the lamp to "breathe," and for foul gases to escape to open air. It will be remembered that the gas and heat from the lamp do not pass directly into brooding chamber, but instead, the heat radiates through the galvanized iron heater drum over the lamp.

ABOUT CAPACITY.

These brooders are large enough to properly care for at least 50 newly-hatched chicks without any danger of over-crowding. Indeed, they will care for 75 or 100 as safely as any other brooder of that rated capacity, but experience teaches that it does not pay to put too many chicks together in any one brooder at first, and with 50 chicks at the beginning better growth will surely be obtained. Even this number should be reduced a couple weeks or so later on, as the chicks increase in size and development.

By running a corner-board around edges of the box as shown, gives a more tasty appearance, and when the brooder is completed and painted in two colors (our choice is yellow with white trimmings), it is extremely tasteful and attractive in appearance.

I also use another type of piano-box colony house, without heating attachment, used for older chicks only, after they have outgrown the need of artificial heat.

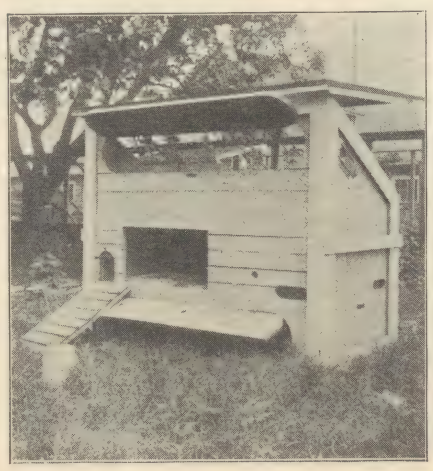

FIGURE 3 ANOTHER STYLE

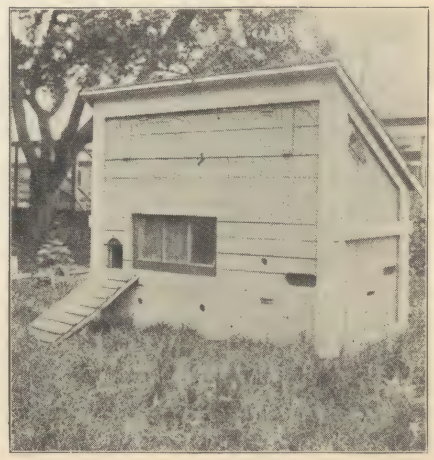

FIGURE 4 CLOSED UP

It will be possible ordinarily to save enough material from discarded parts of the box to furnish corner-boards, trimmings, etc. If not enough for roof, then any sound boards, rough or planed, will answer, as the roof should be covered with good quality tar paper, carefully and closely nailed, the tar being renewed annually to prevent leaking and decay.

How the Mighty Have Fallen.

It was with much regret that I noticed the display of Standard Games at New York, December, '07. Just think, only seven exhibits, all Black-Reds.

There are causes, there must be causes. I believe the first and principle one lays with the game club, who are dormant as regards the boosting (excepting the sheckles doled out at the annual meet) of that once popular breed. I think it would be a wise move to follow the other specialty clubs, and push the breed along, through the medium of the Poultry Press and Club Literature.

It is also apparent that the Poultry Journals notices our rearward progress by their silence out of the numerous reports of the New York show, and in fact, the other large shows, have noticed only one touching on ex-Games, that one was as brief as could be put in nine or ten words.

I must confess that our Poultry Journals are sadly lacking for want of impartiality in not giving the more obscure classes the same full and detailed reports as they do the more popular ones, this I think is another just cause for complaint on the part of the ex-Game breeders and the other breeders who are under the same ban.

Coming down now to the last and final criticism concerning that inglorious display at New York, is to my mind, the raising of the entry fee from $2 to $3. Where does the amateur come in? Nit. He doesn't come in. He stays out.

Consequently the pros. have it all to themselves. It is with some misgivings that I have of showing at New York again, unless that old time rivalry can be resurrected among the game fanciers, thereby joining the majority and leaving the arena to the minority or pros, who can earn their bread from their exhibits.

To my mind it has got to be a case of commercialism (a case, if we can keep the more popular classes coming, let the others sink), and not the true fancier's spirit.

Now, Mr. Editor, I am not looking for any free advertising to sell stock, but will feel amply repaid if we could only see the game exhibits were they where when Pierce, Blunck, Glasgow, Barber and Crowe, etc., were pitted against each other.

I do believe though, that only through the Poultry Press can the once popular and still autocrat of poultrydom be resurrected. Come on, "Doc.," the pen (either pen) is mightier than the sword, so get down to business and help the cause officially.

Also you, who have assumed a laggard and indifferent attitude to what you once had.

These appeals and criticisms are earnestly given by yours for more and better games.

W. C. MUDGE.

Columbian Wyandotte Pullet, 1st New York, Dec. 1907, owned by L. L. Bright, who claims that the bird was not exhibited at Scranton.

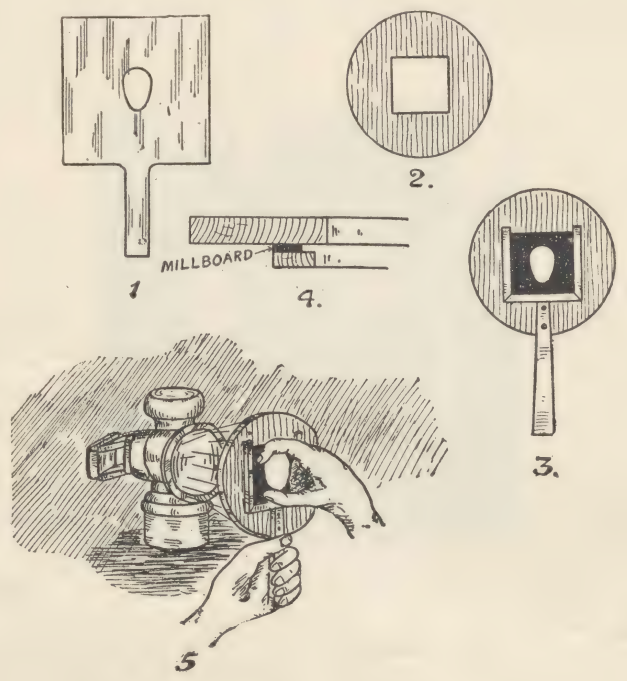
Mr. L. L. Bright, of Scranton, Pa., furnished THE AMERICAN FANCIER with the information in the form of an affidavit that his first New York pullet was not on exhibition at Scranton and had never been beaten. The editor of THE AMERICAN FANCIER wisely held up my ad. for investigation, which stated that I won 1st on Pullet over 1st New York Pullet. The editor of this paper thoroughly investigated the matter and has re-inserted my ad., which again appeared in the April 15 number, worded the same as before. Mr. Bright also swore in his affidavit that he won two specials to my one. I have furnished this office with a list of specials won on Columbian Wyandottes at Scranton, which show that I won 5 specials, and Mr. Bright 3, as follows: Won by Mr. Bright—$5.00 Special for best Cock, club special for best Cockerel, Special for best collection. Won by Harry B. Miller—$5.00 Special for best Pullet, Club Special for best Pullet, 1 year subscription to AMERICAN FANCIER for best pullet, Club Special for best colored female in show, won by 1st Pullet; Club Special for best colored male in show, won by 2nd Cockerel. All other specials were won by Alvin Brey, on 1st Cockerel; D. Lincoln Orr, on 1st Hen and Homer D. Hand, on 1st pen. My birds won over Mr. Bright's birds in 3 classes out of 4.

I have talked with nearly all the leading fanciers in the vicinity of Scranton and officers of the Scranton Association and I have as yet to find a single man who is not positive that Mr. Bright had his 1st New York Pullet at Scranton, to many of them he showed the Pullet during the show.

HARRY B. MILLER.

How to Test Eggs

Eggs that are undergoing the process of incubation, either by natural or artificial means, should be twice tested to ascertain which are fertile and likely to produce chickens and which are infertile and useless for hatching purposes. Some of the advantages of testing are that the eggs which prove to be infertile at the first testing need not be thrown away as useless, as at this period they are quite wholesome, and can be utilized either for immediate chicken feeding or be boiled hard and saved for feeding the forthcoming brood; whilst, where two hens have been set at the same time and a large number of the eggs comprising both sittings prove infertile, the whole of the fertile eggs from the two nests can be placed under one hen and the other hen be provided with an entirely fresh sitting.



Another point to be remembered is that after being incubated for a short time heat is generated by fertile eggs, whilst the infertiles generate no heat, and when the latter are allowed to remain amongst the former they absorb a certain amount of the heat generated, which must have a detrimental and retarding effect upon the development of the embryo chicks inside the fertile eggs.

The first testing of hatching eggs should take place on the seventh or eighth day of incubation, various appliances and lamps being obtainable for this purpose, but unless the number of eggs is very large one of the home-made testers illustrated herewith will fulfill all requirements, this operation being best performed at night or in a dark place or room.

The tester illustrated in Fig. 1 simply consists of a piece of stout millboard, say about ⅛ in. thick, 7 in. or 8 in. wide, and 12 in. long, shaped with a handle as shown and a hole cut through the centre the shape of an egg, but a little smaller, the broad end, of course, being at the top, whilst the millboard should be dark in color, painted black for preference.

The tester shown in the other sketches is a more permanent and substantial arrangement, and consists of a circular or square piece of wood 7 in. or 8 in. across, with a square hole cut through the centre as shown in Fig. 2. A piece of wood should be screwed at the bottom to form a handle, and to form a groove round the hole in the centre a narrow strip of wood must be tacked round three sides as shown in Fig. 3, with a narrower strip of stout millboard between the two thicknesses of wood as Fig. 4. A zinc or cardboard plate painted black and with a hole cut through the centre the exact shape of an egg, but a shade smaller, must be provided as shown in Fig. 3, the appliance then being complete with the exception that two or three other zinc or cardboard plates with different-sized holes should be prepared so that eggs of various sizes can be tested.

A bright light is necessary, a bull's eye or cycle lamp usually being as good as anything for providing this. The tester must be held as shown in Fig. 5 between the light and the eye of the person testing, the egg to be tested being placed against the hole in the plate and held and handled in such a manner that the light plays directly upon it.

Infertile eggs will appear quite clear, similar to a newly laid egg, whilst those which are fertile will have a darkened centre surrounded by a clouded substance, and if the light is very strong and bright it is quite possible that small blood vessels will be visible. White-shelled eggs are more easily tested than brown-shelled eggs, the dark color obstructing the light, and on this account the latter are frequently allowed to incubate for nine or ten days before being tested, development then, of course, being more advanced. The fertile eggs should again be tested on the fourteenth day of incubation, and any that contain dead germs, known as addled eggs, be removed.—*Feathered World* (England).

* * *

Farmers throughout the county are eager to assist the department in increasing the pheasant population by hatching out eggs to be supplied by the department. Quail are abundant in parts of the county where there is cover, and prairie chickens can be counted in flocks of fifteen to sixty. Before the new game law was passed the chickens were almost extinct.

Columbia Poultry & Pigeon Ass'n Inc.

At the annual meeting for the election of officers, the following were elected; J. F. Defandorf, Garrett Park, Md., president; J. D. Summer, Kensington, Md., first vice-president; John R. Risdon, Riverdale, Md., second vice-president; Charles L. Blanton, Falls Church, Va., third vice-president; Miss N. B. Stone, 909 H street, N. W. Washington, D. C., treasurer; Calvin Hicks, Rockville, Md., secretary. With the above the following constitute the board of directors: Mr. Hendricks, Mr. A. D. Brown, Mr. Lee Pitchlynn, Washington Waters, and C. B. Krogmann.

The next show will be held January 25th to 30th, 1909.

* * *

All eggs, whether good or bad, are used for some purposes. The perfectly fresh eggs are mostly consumed by the first class trade. Then comes the eggs used for cooking by restaurants, hotels, bakeries, etc. Cracked eggs are sold to egg canneries who put them up in 50 lb. cans and sell them to bakeries. They come in whites and yokes separate. The spoiled eggs are made into a preparation used in tanning kid, and a Chicago man is reputed to have made a fortune collecting such eggs from dealers. In Europe, powdered eggs are prepared in considerable quantity. All the water is evaporated from them at a very low heat by currents of air and they are then pulverized. Salt or sugar is sometimes added as a preservative.

Wyandotte Club for Texas.

We are informed that a club is being organized and as President Mr. J. S. Murchison, of Corsicana, Texas; and as Secretary Mrs. J. L. Winniford, Lancaster, Texas.

Have just received catalague of the "Faultless Houdans" bred at Rochelle Manor Farm. The catalogue is well gotten up with an artistic cover printed in two colors—black and green. It contains 16 pages, exclusive of cover, and 13 half-tone illustrations. One of the illustrations shows 1st New York Cock and 1st New York Hen, Dec. 1907, under which is printed that their egg record is 288 and that there was an offer made of $2,000 for this pair by Mr. J. Walter Breeden, Bradford, Pa. This was refused but another pair was sold him for $1,000.

Mr. E. F. McAvoy, Jr., owner of Rochelle Manor Farm, Cambridge, N. Y., will be pleased to send a catalogue upon request and we would suggest that our readers write him for one.

LEWISBURG, Pa.

The second annual show of the Buffalo Valley Poultry Association will be held at Lewisburg, Pa., December 29, 30, 31, 1908; January 1, 1909.

American Poultry Association.

Former life members whom the secretary has not been able to locate through the mails. Their old address is given and any information that can be furnished as to their present whereabouts will be much appreciated by the secretary:

R. S. Deener, Batesville, Ark.; James T. Brown, Los Angeles, Cal.; N. K. Eldred, Sacramento, Cal.; Miss Frances Fithian, Verdugo, Cal.; J. L. Waggaman, Washington, D. C.; Thomas W. Tuggle, Columbus, Ga.; E. L. Lamb, Chicago, Ill.; E. A. Suender, Chicago, Ill.; E. S. Comings, Indianapolis, Ind.; Frank W. Ashley, South Bend, Ind.; T. A. Cochran, Baltimore, Md.; W. T. Levering, Baltimore, Md.; S. M. Clement, St. Dennis, Md.; A. D. H. Faulkener, Charlestown, Mass.; Chas. H. Akerly, Jersey City, N. J.; W. P. Smith, Jersey City, N. J.; R. Y. Fairservice, Newark, N. J.; B. A. Garlinger, Sewell, N. J.; C. N. Ross, Auburn, N. Y.; A. J. Silberstein, Brooklyn, N. Y.; H. B. Thomas, Troy, N. Y.; W. L. Tobey, Valley Falls, N. Y.; Alphonso J. Hill, Akron, Ohio; Frank Saumenig, Springfield, Ohio; J. A. Warren, Johnstown, Pa.; T. M. Nelson, Pittsburg, Pa.; Frank Jenkins, Richmond, Va.; E. P. Bowditch, Centralia, Wash.; W. Schlager, Milwaukee, Wis.; V. V. Worthing, Rawlings, Wyoming; National Wyandotte Club.

Ross C. H. Hallock,
Secretary.

St. Louis, Mo.

The following we quote from the *Boston Journal*

"Banking interests have made their first move to control the output of the American hen. Bankers in Pittsburg, New York and Chicago have combined to control the storage of an estimated number if 300,000,000 eggs. Incidentally the combine involves the settlement of the question of the value of eggs as collateral. The syndicate it seems, has agreed that in the future not more than ten cents will be loaned on each dozen of eggs in cold storage. Last year the loans went up to fourteen cents, and the certificates, or 'negotiable warrants,' have had a standing of their own in business circles. Thus in Pittsburg, we read, they 'are almost as freely recognized as pig iron certificates.' Whether the limitation of these certificates will have the effect of knocking down the price of eggs is one of the interesting speculative features of the present move. The feeling in the Pittsburg market seems to be that a slump is certain.

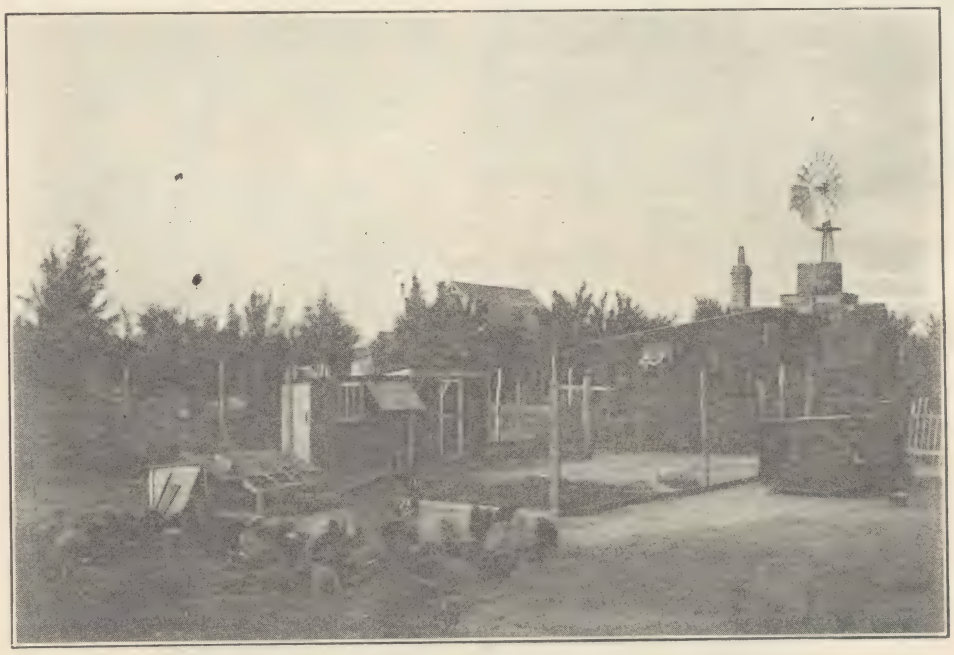
"The storing season begins about the first of April. New York and Chicago generally store about a million and a half cases of thirty dozen each. The Boston business is put at 650,000 cases, or 19,500,000 dozen. It is said that this year the price at storage will be fifteen cents a dozen. Last year it was a little higher. The market price when the eggs are taken out of storage varies, but it is usually about three times the price prevailing at storing time.

"The eggs thus put away against the days when none are laid but some are wanted represent less than a quarter of the total production. The federal census of 1900 gives the country's supply as 1,293,662,433 dozen. Iowa was then the leading State, with a production of nearly 100,000,000 dozen."

Of Interest to Black Minorca Breeders

Breeders of the Single Comb Black Minorcas are awake to the fact that the American Black Minorca Club is an organization of great value to them as breeders. All the noted Black Minorca breeders in America are members of this club and also nearly every breeder who has exhibited winning Black Minorcas in the United States and Canada within the last year. The cash specials, silver cups and ribbons which the club has offered for the competition of its members in all the leading shows this winter have greatly increased the exhibits of Single Comb Black Minorcas and have stimulated new interest in the club by convincing its members that the club is exercising its full power to distribute benefits equally among all its members, and is using its entire income to that end.

The policy and practice of the club has been changed within the last few years so that instead of centering about one large show as it formerly did, its annual meetings have been held in different parts of the United States and its benefits have been so widely distributed that all members have equal opportunities to avail themselves of the advantages which the club can give them.



The club is working in perfect harmony. During the past two years it has retained a much larger proportion of its old members than ever before and since I was appointed secretary, one year ago last September, nearly as many new members have come into the club as were received in the whole ten years of the club's existence. Last month we added 25 new members to our list and the indications point to a greater increase this month.

We are now preparing a catalogue which we expect will be the best the club has ever issued and it is to the advantage of the Minorca breeders who are not members of the club, to join us now so as to be listed in the catalogue and avail themselves of the standing which it gives to be identified with such a popular organization.

I shall be glad to mail a membership application blank to anyone who breeds Single Comb Black Minorcas and is not a member of the club and to anyone who is sufficiently interested to write me on the subject I shall be glad to give additional information about the advantages of this club which I ought not to take space to enumerate here.

PLYMOUTH ROCKS WIN FIRST BREED STANDARD.

The following has been sent by the Secretary of the American Poultry Association, but it figures in the entries from only 124 Poultry Shows: In an interesting contest conducted by the American Poultry Association, with the officials of 124 poultry shows sending in certified lists of the number of entries of each breed shown, at their respective shows, for which the regular entry fee has been paid, the Plymouth Rocks win over the Wyandottes by 2,194 entries, and will be entitled to the first separate breed standard to be issued by the American Poultry Association in accordance with resolutions adopted at the meeting at Niagara Falls last August.

Below is a detailed report of the total entries of each breed at the shows reporting:

Plymouth Rocks, 14,514; Wyandottes, 12,320; Leghorns, 8,740; Rhode Island Reds, 5,812; Orpingtons, 2,857; Langshans, 2,153; Minorcas, 1,709; Cochin Bantams, 1,590; Games, 1,277; Brahmas, 1,181; Cochins, 1,010; Hamburgs, 758; Game Bantams, 637; Polish, 618; Houdans, 538; Indians, 538; Anconas, 464; Sebright Bantams, 423; Andalusians, 311; Rose Comb Bantams, 144; Javas, 117; Japanese Bantams, 115; Dorkings, 105; Brahma Bantams, 104; Buckeyes, 95; Silkies, 85; Spanish, 83; Redcaps, 71; Sumatras, 41; Polish Bantams, 37; Sultans, 18; Malays, 12; Frizzles, 7; Le Fleche, 7; Dominiques, 5; Booted Bantams, 4; Malay Bantams, 3; Crevecoeurs, 3.

Live Chicks in Sugar Eggs.

Recently the Society for the Prevention of Cruelty to Animals notified various dealers that it would be a violation of the law to sell newly hatched chicks as Easter gifts. We wonder if the following would also be considered a violation of the law:

Just before Easter sixty chicks arrived at the Hotel Knickerbocker, N. Y., from Long Island and on Easter Sunday appeared at the dinner tables in sugar eggs from which they released themselves by breaking the shell and then these tiny little fellows hopped across the table and endured philosophically the "Isn't it cute?" and "Come to me cunning" of the women diners. The manager of the hotel claimed that there was no cruelty whatever in this, as after the dinner the chicks were sent back to the Long Island farm uninjured.

The proof sheets of the National S. C. Minorca Club catalogue indicate that when finished it will be a work of art. It is being printed by Mr. H. W. Billard, the club secretary, who runs his "Print Shop" for pleasure, not profit. He is taking infinite care with the entire work and we all know Billard never fails to "deliver the goods."

* * *

With address at Forest, Ont., Canada, two poultry concerns of that place are advertising to sell eggs for hatching on credit. The plan of one is to sell eggs at $2 per 15, payment to be made by note payable January 1st, 1909, or $1.50 cash. The other concern advertises the eggs at $2.50 per 15 by note, payable November 1st, 1908. No deduction for cash with order. Both concerns have a note printed in their advertisement so that the purchaser can fill out the note and forward it with order.

Madam Paderewska Continues to Purchase American Bred Birds For Her Poultry Plant at Switzerland.

Mr. Geo. W. Weed, East Lee, Mass., called at our office and shows us communications between Mrs. Paderewska's American representative and himself, from which we learn that he has sold six Black Wyandottes and six Black Orpingtons. These birds brought a high figure.

Owing to the values of these birds, Mr. Weed was in New York endeavoring to place insurance on the shipment. The birds cannot be insured against mortality, but only in case of an accident or fire, and even at this, the premium is so high as to prohibit the insuring of exportations.

The AMERICAN FANCIER

ESTABLISHED 1893.

Published by

LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

EDITORIAL AND BUSINESS OFFICE REMOVED.

On April 23d we removed our editorial and business offices from 108 Fulton Street to 30 Church Street, the Cortlandt Building of the Hudson Terminal, the largest office building in the world. This building was completed two days previous to our moving in and it is such a wonderful structure that we believe the following description will be of interest.

The building faces Church Street, towering twenty-two stories with a frontage of two city blocks from Fulton to Cortlandt Street and Dey Street through its center. So hugh is this building that it can accommodate the population of the city of Geneva, N. Y., or Adrian, Mich., or Bath, Me., which is about 10,000, or we could house about one-half of the readers of THE AMERICAN FANCIER.

It is hard for the human mind to conceive such a structure as the architects have dared to plan. Below the first floor are the subway lines and the station for the Pennsylvania Railroad, and one can go from here to New Orleans, La., or any point between without going out of doors, similarly, one can go from this building by way of the Long Island Railroad to the end of Montauk Point or can journey to Montreal, Canada, by the New York Central or to Boston by the New York, New Haven and Hartford and never once stick his nose out of doors. Or have the choice of many routes to Chicago without ever once coming out from under cover.

It is estimated that 1,000 a minute, or more than 500,000 persons a day will enter and leave this building, about the population of such great cities as Boston, Baltimore or St. Louis. There are thirty-nine elevators operated by electricity at the rate of 500 feet a minute.

This building now constitutes the hub on which is focused all the downtown traffic of three great railway systems and trolley lines.

Nothing that has been projected in the City of New York will be quite so unique as this great structure. The intercommunicating system of tunnels and subways, of which it is the nucleus, will probably do more for the extension of the Metropolitan district than any improvement contemplated in Greater New York.

The Hudson Terminal, where we are now located.

Augusta Poultry Association.

Dr. W. C. Cleckley continues as president, R. S. Guess, vice-president; W. A. Herman, secretary; A. R. Walton, treasurer. The Directors: A. J. Salinas, J. Miller Walker, J. W. Levy, W. R. Munday, M. C. Jones, Dr. F. E. Newhall, L. A. Dorr.

Reports of various officers and committees for the past year showed that the affairs of the association had prospered and that everything at present was in splendid shape. The last annual exhibition, given in conjunction with the Georgia-Carolina fair, was reported to have been a success from every standpoint, and the treasury shows a neat balance on hand, while the association also owns a number of modern coops for exhibition purposes.

Individually the members of the association have obtained fine results with their birds during the past year and many have taken important prizes in out-of-two shows.

The triumphs of Dr. W. C. Cleckley, whose entries at Madison Square Garden captured prizes in competition with birds from all over the world, were not only a source of congratulation on the part of his fellow-members, but were so notable as to bring Georgia into a prominence she had never before attained in the fancy poultry world.

* * *

The Perfected Poultry of America, by T. F. McGrew and George E. Howard, with illustrations by Louis P. Graham, is intelligently written, well illustrated and artistically printed. It is bound in an attractive cover and contains 257 pages, with many illustrations. It is of great value to all poultry men and a handsome addition to any man's library.

* * *

Mating List.

The Westlook Farm Mating List was printed by THE AMERICAN FANCIER. Write for one and address Westlook Farm, Dept. F, East Norwich, L. I., N. Y.

* * *

Recently we printed five hundred mating lists for the Sunswick Poultry Farm. This farm must have had a number of requests for their list as we have just received word to print up 500 more. Mr. Geo. J. May, Manager, South Plainfield, N. J., will be pleased to send one of these lists upon request.

* * *

Prince T. Woods, Middletown, Mass., has sent us a copy of the *Poultry Men's Formulary.* This book contains reliable tested receipts for ready mixed grain foods, how to prepare balance rations for poultry, formulas of useful remedies, tonics, egg foods, etc.

* * *

Herman Haupt and Joseph Banzner are held as prisoners at Trenton, N. J. Both have confessed to the police that they went to the home of Mrs. Anthony Kade to steal chickens, and each accuses the other of having hit the woman. Mrs. Kade was found laying dead on the porch of her home. Death was due to the blow she had received.

Blood Spots in Eggs.

This trouble is not uncommon and is caused by a rupture of some of the minute blood vessels inside of the eggs. The *Rural New Yorker* says that this is due sometimes to fright or weakness caused by heavy laying or low vitality.

* * *

On March 23rd, Allan Bogue, 76 years old, died at his home in London, Canada. He was a successful breeder of Houdans, Hamburgs, Dorkings and Polish and at one time was president of the American Poultry Association.

* * *

Barred Minorcas.

This variety of Minorcas are now being bred in America, parent stock having been imported from Germany.

* * *

American Light Brahma Club Catalogue

will be mailed upon request. Address Secretary Emery Banks, East Pembroke, N. Y.

On Tuesday, April 21 a consignment of English Pouters for George Ewald arrived in New York on the steamer Bovic. The shipment consisted of 98; one died enroute. After being fed and watered they were shipped by express to Cincinnati.

The lot comprised all the colors, and amongst them we noticed some very promising birds and no doubt many will be seen in the show pens this coming season.

* * *

The band question each year seems to be getting more complicated; at the present time there are hundreds of fanciers that don't know what band to use, how or where to get them.

The new band which we have seen sent out by Secretary Whitney were the English Conference band. One fancier showed us this new American band but we produced the same make purchased the early part of the season in England.

We know the trouble the band committee of the club must have, but unless the club is in a position to carry out its rulings it will have to recognize any seamless regulation size band.

* * *

Dr. Fred Peterson has purchased a new residence in Smithtown, L. I., and moved his entire loft, with birds breeding and fire going during the trip, as his loft will easily accommodate 200 fantails it must have been quite an undertaking.

With the addition of new blood this spring the Nisequogue stud will be a strong factor in the show pen next season.

* * *

James Glasgow called at the office and reports the fantails at Mahwah are about all settled in their breeding quarters and the first round of youngsters were ready for their new apartments by themselves.

Fantails and quite a few of the German varieties are bred in goodly numbers at the Mountain Side Farm, the quality—well there is hardly any need of speaking of that.

Mr. T. A. Havemeyer was appointed judge at the last annual meeting of the Eastern Fantail Club to officiate at the next annual meeting. This has always taken place at Madison Square Garden, but this year we believe more than ordinary enthusiasm has been displayed to have the club meet at Boston next year. The question of novice classes for fantails is another thing the club must consider before the next annual meet and show. A number of members have written regarding this question and we believe it would be an advisable plan to have a few novice classes at the next show.

* * *

The Eastern Fantail Club is one of the strongest specialty clubs in the country and the list of specials offered each year are well worth the striving to win. Every breeder of fantails in America should join and do his part in promoting his variety. Dr. F. H. Howland, 11 Pleasant street, Worcester, Mass., is secretary and treasurer.

* * *

The Eastern Maltese Hen Pigeon Club has started with 38 members and expects to have 100 members by the first of June. The objects of the club are to bring this variety before the public and to promote the exhibition of this variety the coming season. Mr. W. E. Shreve of Westville, N. J., is secretary

Fantails and Their Management.

In buying Fantails, one must be very careful, if the wish is to build up a strain to breed winners. I strongly recommend the novice or beginner not simply to buy from men who win at shows, until they find out if they are the breeders of such specimens, for it is easy for the man with a long purse to secure good birds and win. Get to know the breeders of such specimens, and buy your stock from them, says P. R. Harrower in *Feathered World.*

In visiting lofts with an object of buying, watch for the fancier who has a good all-round lot, get the pedigree of the bird you fancy or is recommended to you from his stud book, and the deal will always be more satisfactory.

All breeders of Fantails keep stud books, and should have no hesitation in showing same to a purchaser of stock. There are breeders of this variety when they breed a very good looking young bird with only one objectionable fault, viz., "a weakness in the centre of the tail," rather than destroy it or keep it back for stock purposes, they stitch cardboard on the tail and pull the feathers over to make this opening look as if there were no opening. This I call very dishonest. The bird is sent to a show; is judged, perhaps by a man not quite competent, and awarded first or second prize; but, if it happened to be a show of three, four, or five days' duration, the specimen on the last day or so would not be recognized even by the appointed judge. Should this specimen be in the catalogue at, say £5, it might on the first or second day be claimed. What would the new owner think when the bird was sent home? I give this argument to show how dishonest it is to tamper with a bird and show it. Some might argue, why appoint a judge not competent? and those that argue thus I contend are right. If specialist clubs insist upon having their principal shows judged by their own members, and a different member at each show, this will prove that nearly all the members must be judges. Of course, men anxious to judge must make a start, but let that start be made after they have had many years' experience, and can prove by their awards that they are competent.

Whilst on the subject of Fantail judges, I regret to say that there are really very few specialists; you could count them on your fingers, and the majority of these being exhibitors, refuse their services, and yet, if a man outside the club should be appointed, you rarely find these men, who have themselves refused to judge, sending any entries. This should not be, and I feel confident it would be to the advantage of the variety and shows if well-known men (there are a few), who do not show, were engaged as specialists to judge this one variety. In judging a lot of Fantails, the tax on the brain is very great, and great nerve and a thorough knowledge are absolutely necessary.

When your birds arrive home from a show, do not pen them up, but place them in the aviary, with plenty of food and fresh water, also a fresh bath, as water for drinking and washing is at once sought after. After a three-days' show, I give my home-coming birds a tonic pill as a sort of reviver after their long penning and railway journey. I find this of great benefit.

Just one last word of advice: Never show a bird that is not in good health, and always see that the birds you are packing up for a show are well fed and watered first.

I am now going to give beginners a few hints on the various points Fantails should possess, points good judges go for; and in giving these I trust I will make myself thoroughly understood. The head should be small and snaky, and, for show specimens, free from a "peak"; I mention the "peak," as many of our best stock birds have "peaks," and denote the pure Indian blood. The beak should be fine, medium length, and flesh coloured, and showing as little beak wattle as possible; the eye, of course, varies with the various colours, the white Fantail should have what is termed in the Fancy a "bull eye," the blue, a pearl eye, the black, a pearl or orange eye, the red and yellow, an orange eye, the silver, a pearl eye, and the saddle, the same as the white. The neck should be thin and nicely curved, the length of same to correspond with the length of the bird's back, so as to enable the head to rest comfortably on the base of the cushion; the size of the body should be small, and the shape round the chest full and broad; avoid narrow-chested birds; the back should appear slightly hollowed in centre, and the rump should be of sufficient size and strength to balance the tail; the cushion should be full and massive; the tail should not be too flat, but, if anything, slightly concave and circular, being well and closely filled with long, broad feathers, which should overlap each other and should be evenly set; the feet should be small and very bright red; and the legs shortish (not stilty). The bird when in position should stand on tiptoes and have the chest upright, almost in a straight line with the legs, with the head back in a graceful position, resting on the cushion; the wings should be closely braced, and the flights just clearing the lowest tail feathers, and almost meeting at the tips; the legs should be well apart, and to enable the tail to be carried properly (that is, not to drop on the floor or umbrella over the head) the legs should, at the hocks, look as if being forced outwards. There should be a continuous jerking or twiching of the neck (usually called motion), and the head should be constantly tapping the back cushion, low down, the body quivering all over (this denotes high breeding). The feathers should be hard and tight.

Blacks, blues and saddles are improving, but have not yet reached the very high standard of the whites. Reds, yellows and silvers do not make much advance, and nothing has yet been seen to equal the champion yellow shown some years ago by Mr. Stuart-Murray. When certain colours are hard to produce good enough for the show pen, it is difficult to get fanciers to take up such colours, for it requires one of great determination to succeed. Colour-breeding, when the high-class points must also be kept up, is most interesting.

It is quite unnecessary to waste a lot of space in giving all the points of the different-coloured Fantails, as the club standard will be published at the end

THE HOME OF THE FOREST GATE STUD OF FANTAILS.

Geo. E. Gray, England.

BLUE SADDLE AND WHITE FANTAILS.

of the article. The standard I quite agree with as regards all the colours, but although it is supposed to act as a guide to judges you never find a real good Fantail judge judging by points. It is unnecessary as a man who can judge a Fantail does not require to sum up the various number of points for this and that; he sees almost at a glance all the points and cannot get away from a good bird. Some of the specialist judges now appointed unfortunately do not "go" for a good all-round specimen, as the beginner himself will sometimes notice many a poor-tailed specimen receiving high honours, because to their way of thinking it has other points, but I wish to point out that the word *Fantail* denotes that tail is necessary. It is, of course, the delight of Fantail breeders to keep their birds small, and in so doing the tail is sometimes sadly overlooked, and I contend that a *fair-sized, all-round bird* should always get distinct preference over the small "squib" that lacks one of the principal features—*tail.*

DANBURY, CONNECTICUT.

The Western Connecticut Poultry Association of Danbury Conn., will hold their 13th annual show in the new State Armory, Dec. 9, 10, 11, 12. Plans are already under way to have a good show this year. Names of judges will be published later.

HIRAM S. REYNOLDS,
Secretary-Treasurer.

Danbury, Conn.

AUBURN, N. Y.

The Annual Meeting of the Auburn Fanciers Association was held Friday, April 3d, and the following officers were elected for the ensuing year: President, Philo B. Adams; First Vice-President, F. B. Townsend; Second Vice-President, G. C. Smith; Secretary, J. H. Scott; Recording Secretary, Allen Linneback; Treasurer, F. B. Townsend; Superintendent, J. L. Carpenter. Board of Directors: Charles Dalton, Wallace Walker, Budd Gambee, Max Stenzel, Charles Jones and J. H. Post. It was decided to hold the 8th annual exhibition the week of Dec. 14-19, 1908.

J. H. SCOTT,
Secretary.

Auburn, N. Y.

NORRISTOWN, PA.

The fanciers of Norristown, Pa. and vicinity, organized an association on April 2d, and expect to hold a big show in Norristown next fall or winter. Considerable enthusiasm prevails around town and the conditions are almost ideal for having one of the best shows in the State. Dates and other details will be decided at the next meeting, on May 14. The following officers were elected: President, Wm. H. Patton, Norristown, Pa.; First Vice President, A. J. Fell, West Point, Pa.; Second Vice President, G. K. Morehead, Norristown, Pa.; Secretary, Raymond Swab, Norristown, Pa.; Treasurer, Thomas H. Johnston, Norristown, Pa. Board of Directors: W. E. Baker, Chairman, Center Square, Pa.; Geo. W. Middleton, Jeffersonville, Pa.; Frank G. Bean, Collegeville, Pa.; R. H. McFarland, Jeffersonville, Pa.; G. H. Davis, Norristown, Pa. A Superintendent will be elected at the May meeting.

RAYMOND SWAB,
Secretary.

LARKS

THE IDEAL SQUAB BREEDER

Your Pigeons will do well if you give them FOUSTS HEALTH GRIT, in use for 18 years

A preparation necessary to the digestive nature of cage birds, combined with medicinal properties that insures health and sturdiness. Most all the large pigeon breeders use it and one says "of course, there are lots of other grits cheaper, but there are *none as good as Foust's.*" No other grit or medicine needed. Send for free sample and watch the pigeons eat it.

$2.00 PER 100 LB. SACK, F.O.B., CAMDEN.

FOUST'S, 721 Federal Street, Camden, N. J. Write for Wholesale Price

KENTUCKY PIGEON LOFT. **Nothing but the Best**

My Stock consists of the genuine Antwerp Homers, imported direct from Belgium by me personally. Write for circular.

Exclusive Dealer of Imported Homers.

WILL W. ROBERTS, Nicholasville, Ky.

THE HEALTH GRIT

For squab breeders and fancy pigeons I have the best grit ever put in a pigeon loft. My testimonials from fanciers prove it. Try a bag, $2.00 per 100 lbs. Send for circular and wholesale price. Agents wanted.

My White Clean Leg Tumblers are well known in the show pen, look up record. Stock for sale at reasonable prices. L. G. BROSCHKOWSKY, 611 So. 6th St., READING, PA.

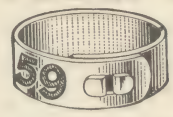
JUMBO SQUAB BREEDERS

Are Largest and Fastest Breeders. Every pair guaranteed mated and banded. Money-makers everywhere. If you wish to be successful, start with Our "JUMBO HOMERS." Send 4 cents in stamps for our large ILLUSTRATED BOOK 'How to make MONEY with SQUABS'

PROVIDENCE SQUAB Co, *772 Hope St, Providence, R.I.*

Explain the quality of the birds you have for sale to a large audience, of well-to-do poultry men and doubtless you will make many sales.



an Ad in

talks to an immense audience of successful poultry fanciers, many of whom are wealthy men who breed merely for pleasure and who subscribe to this paper only. They are big spenders and if the quality of the stock offered is worthy of their attention we know of no better place to advertise it than in THE AMERICAN FANCIER.

In addition to the thousands of fanciers who subscribe to this paper we have thousands of readers who are beginners and just starting to raise poultry.

Ideal Aluminum

LEG BANDS for Poultry and Pigeons are the acknowledged leaders. Firmest and most secure lock. Guaranteed to stay on. Price, post-paid, 12 for 15c; 25-25c; 50-40c; 100-75c. All supply dealers sell them. Sample band and B. P. Rock circular sent for 2c stamp.

Frank Myers, Mfgr., Box 67, Freeport, Ill.

To encourage Tippler flying, I offer $10 in gold to the fancier doing the best fly with youngsters bought of me in 1908. Send at once for free breeding list, giving full particulars about the best stud of high and long flying Tipplers in the world. I have bought the champions of England and birds I have sold have bred the champions of America.

J. O. McAREE MIMICO, CANADA

Y., Cleveland, Ohio, I won 20 regular and 17 special premiums, including 5 color and 3 shape specials; stock for sale at all times; eggs in season at $2, $3, and $5 per 15; satisfaction guaranteed. C. W. Augenstein, 99 Weldon St., Rochester, N. Y.

WHITE WYANDOTTES, "DUSTON'S Strain." They have won prizes at Olean, Canisteo, Salamanca and Bradford. My stock scores 95¼. Eggs from the best pens $2.00 per 15. Cheaper eggs if you want them. Eight chicks guaranteed or order duplicated at half price. Geo. Mohr, Olean, N. Y.

SANBORN STRAIN BUFF WYANDOTTES. At Rochester, 1908, 1st Pen 2 years in succession; 1st and 4th Pullet and 4th Hen. All stock bred from prize winners, of rich, even color; the laying kind. Settings from $2.00 up. Cockerel for sale. Charles Pearson, Geneseo, N. Y.

AMERICAN CHAMPIONS — SILVER Wyandottes, in the leading shows of America since 1888; their show record is unequaled; they have Wyandotte shape, size, Black and White Lacing; none better; eggs, $3 per 15; grand breeders for half price; your chance of a life time. Samson & Alden, Kirkwood, N. Y.

OAKVALE YARDS — WINNINGS AT Auburn, 1908, Columbians—4 firsts, 1 second, 5 Specials. Buffs—1st Cockerel and Colored Special (one entry). Our Buff and Columbian Wyandottes have also won more firsts than all competitors combined at Holyoke, Mass., Gouverneur and Heuvelton; mating list. E. S. Wilson, So. Hammond, N. Y.

CHAMPION COLUMBIAN WYANDOTTES —Winners of more prizes and Specials at the Great Scranton show than any other competitor; including 1st Pullet, over 1st New York Pullet; almost a clean sweep at Wilkes Barre; also, S. C. White Leghorns, farm raised; eggs and stock for sale; send for mating list. Harry B. Miller, Clark's Summit, Pa. R. F. D.

COLUMBIAN WYANDOTTES. REMEMber that Dr. W. H. Harwood, Chasm Falls, N. Y., is selling eggs this season, at $2 per 15; $10 per 100; from exactly the same high grade of Columbian stock that other breeders are asking from $5 to $15 per setting for; now is your opportunity; I shall ask more next season; nice illustrated circular for stamp; it contains full information, and my winnings last Winter.

WHITE WYANDOTTES—FAMOUS 213 egg strain; highest quality at low prices; eggs from show birds, as well as great layers, that will produce splendid chicks; the stay white kind; good breeding pens, $10; eggs no higher than for ordinary stock; $1.50 setting; $5.50 per 100. Bonnie Valley View Poultry Farm, Montgomery, N. Y.

COLUMBIAN WYANDOTTE SPECIALIST —Handsome pen for sale cheap; headed by a blue ribbon winner; eggs for hatching, half price for balance of season; my New York winning Pullet was not exhibited in Scranton at the recent show; prices on application. L. L. Bright, 630 Deacon Street, Scranton, Penna.

SILVER LACED WYANDOTTES—"THE Open Laced Exhibition kind;" winners of Blue at Kingston, Utica, Schenectady; eggs, $3 per 15; guaranteed nine Chicks or another setting half price; some fine birds for sale; I guarantee satisfaction or return money; write me. J. Reepmeyer, Jr., Craig, Schenectady County, N. Y.

EGGS, $1.00 PER 15; FROM CHOICE Partridge Wyandottes; bred for eggs and show; stock for sale. Wm. Russell, Boonville, N. Y.

COLUMBIAN WYANDOTTES COCKerels for sale with plenty of neck color for breeders—will improve any flock; won 1st Cock, 1st and 3d Hen on five entries at the later Madison Square Garden; also Special for best colored male and female; won more points that any other in class, only one in the class winning two Blues. Nirvana Poultry Yards, Stamford, Conn.

Club Meeting of the National S. C. Buff Orpington Club.

The fourth annual meeting was held at Cleveland, Ohio, January 20th.

In the absence of the President, E. P. Cunningham, Vice-President J. M. Williams presided over the meeting. Over forty enthusiastic members from six different States attended the meeting.

The Secretary's report showed the Club to be in splendid financial condition, and that 600 new members had been enrolled during the year.

The Club has grown to such remarkable proportions that it was deemed advisable to divide its territory into five sections, each section to have its own club show, where a large list of specials will be offered by the club. This show is to be selected by the members of each section taking a mail vote by a committee of three, appointed by the President for each section.

It was decided to have but one club judge, and W. E. Stanfield was elected for this position. Other officers were elected as follows: President, J. M. Williams; Vice-President, Wm. Barry Owen; Secretary-Treasurer, Will H. Schadt. Executive Committee: E. C. Kohlsaat, W. P. Craig, Z. D. Struble and Miss H. E. Hooker, who will act with the above officers.

The Single Comb Buff Orpington class at the Cleveland show, was not only the largest class in the show room by 85 birds, but was the largest class of Buffs ever shown in America. The quality here was immense and so close was competition that many first prize winners at other large shows failed to even get in the money here. The awards were placed by Judge Stanfield to the entire satisfaction of all exhibitors. Buff Orpingtons were exhibited at Cleveland by 28 different members from eight different states.

The club offered eleven beautiful silver cups besides $75 in cash, and this was swelled by $100 cash offered by the Cleveland Fancier's Club, all on the Single Comb Buff Orpington class.

The club meeting and show will be long remembered by all who were in attendance and marks an epoch in the progress of the Club. The Cleveland show is the best attended west of New York, and every courtesy was shown the Club by the management of the Cleveland show.

A few more 1908 Club Catalogues are still obtainable and will gladly be mailed to any one on request.

WILL H. SCHADT,
Secretary.

The
Perfected Poultry of America

The world's greatest illustrated book of Poultry, Turkeys, and Water-fowl, with 117 full page plates of the fowls, feathers, and detailed markings.

By T. F. McGrew and Geo. E. Howard
Illustrations by Louis P. Graham

$10,000 Poultry Book, containing the most complete and authentic work on the origin, history, breed characteristics, shape, and color markings of the recognized breeds of poultry.

Unlike any other Poultry Book and everybody interested in Poultry should have a copy.

This book is printed on heavy plate paper, and is handsomely bound in cloth and stamped in gold. It contains 257 pages, with 117 full page plates. The price is $2.50 a copy, including a year's subscription to THE AMERICAN FANCIER. If you are already a subscriber we will extend your subscription for one year from date of expiration. Make all remittances payable to

THE AMERICAN FANCIER
30 Church Street, New York City

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

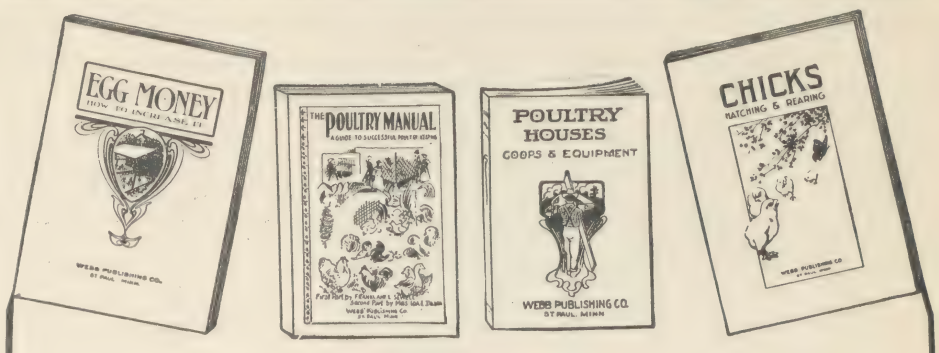
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet. 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.



HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

President American Houdan Club, From 1900 to 1907.

YOU NEED OUR
Profit-Making Poultry Books

POULTRY MANUAL

A Complete Guide to Success.

Contains 168 pages, illustrated; everything the fancier and exhibitor want to know about the leading standard breeds, breeding show winners, etc. (written and illustrated; by F. L. Sewell, world's greatest poultry artist); utility points of the standard breeds; value of different grains for feeding poultry; best methods of feeding; how to make farm poultry pay, prevent and cure diseases etc. **Price, 25 cents, postpaid.**

EGG MONEY

How to Increase It.

Contains 128 pages, completely illustrated; thoroughly covers the profitable production of market eggs, including: breeding, rearing, housing and feeding layers, to get eggs when the price is high; marketing to obtain better prices; the 200-egg hen; preserving eggs to keep fresh till the price goes up; descriptions of successful egg farms and the methods of conducting them, etc. **Price, 25 cents, postpaid.**

CHICKS

Hatching and Rearing.

A book of 128 pages, illustrated. It tells how to build a satisfactory, inexpensive incubator house; hatch and rear with incubators and brooders and with hens; explains up-to-date care of the growing stock; developing, fattening and marketing; the broiler business; the profitable "soft roaster" industry, etc. This book will save its cost in the growth of one chick. **Price, 25 cents, postpaid.**

POULTRY HOUSES

Coops And Equipment.

This book contains 100 pages, 93 illustrations and over 50 complete plans; it explains how to build the best and cheapest large and small houses (for all climates), roosting and brood coops, all fixtures and utensils; how to make the best foundations, floors, walls, roofs, nest ventilators, show coops, shipping coops, drinking fountains, etc. **Price, 25 cents, postpaid.**

Send 25 cents and any book you select will be sent you by return mail. Address all orders to

VOL. XXVIII NEW YORK CITY, MAY 15, 1908. No. 703

A Jalk With Madame Paderewska

Wife of Ignace Paderewski the World Famed Pianist.

By LEONARD W. LOTT

Copyright by Leonard W. Lott

MADAME Paderewska was at the far side of the room when I entered, and, quickly coming forward, she heartily shook my hand and, placing a chair for me at a table in the center of the room, drew hers alongside, and within a few moments I felt that I had known Madame for years.

"I started with twelve hens," she began, "to get fresh eggs for our table, but the hens did not lay many and some of them looked sick, so I tried to make them happy—No! No! Mr. Lott, you know what I mean—tried to make them well. I was not very successful, so I bought a poultry book, but it did not assist me, and I bought another with like result."

"But Madame," I asked, "do you not get much valuable help from books?"

"Yes, from some, from many, but not all are reliable."

"Have you many books on poultry?"

"Nearly all published, I imagine."

"Of course you have our Guide," I asked. "The Standard of Perfection. You know it is the book with an illustration of a Polish on the cover, not like the one from your country, Poland, which has so small a crest, but one with the heavy white crest, the variety which some believe originated in Holland, while others claim that the name indicates that they came from Poland, and that thirty years ago they were called Polanders. Still, this is not positive proof as certain other fowl are not a native of the place whose name they bear."

"Poland, my country, has sadly neglected her fowl, the real Polish bird so different from the full crested one; but some day she will again have her native bird, for I have brought from there some of the real Polish fowl and will work diligently until I can restore to my country many perfect specimens."

"And, Madame, you breed other varieties at your place in Switzerland?"

"Yes, many—twenty, I think; also water fowl, pigeons, Golden Pheasants and my own variety, called Riond-Bosson, named after my establishment on Lake Geneva. This variety I started with a Golden Polish cockerel and White Silkies. I have invented a brooder which was improved on by my poultry manager "Archer," from England. I received a prize at the show and it will be patented. Many people of Switzerland are now keeping pure bred stock and our poultry exhibitions are well attended."

"Oh! Mr. Lott, I forgot you are not smoking. Sometimes when I talk about my poultry I forget."

Here Madame left the room and I was guilty of straining my ear to hear if Ignace Paderewski was practising in the adjoining apartment. But no, and all I heard was the chirp of a canary on Madame's writing desk. Madame returned with a box of Monsieur Paderewski's famous Russian cigarettes and bade me smoke, and appeared pleased when I spoke highly of them.

"For twenty years," she informed me, "he has smoked the same kind." And I, for the remainder of my stay, continued to smoke cigarettes that were fit for "the gods" and great musicians.

"Your purchasing in America a fowl, the Orpington, of English origin, causes me to ask why?"

"I have also bought them in England," she replied. "The ones I secured in America met my fancy, but I have purchased other varieties here. I visited the last Madison Square Garden Exhibition and there saw some beautiful birds, and have seen many others in different sections of your country."

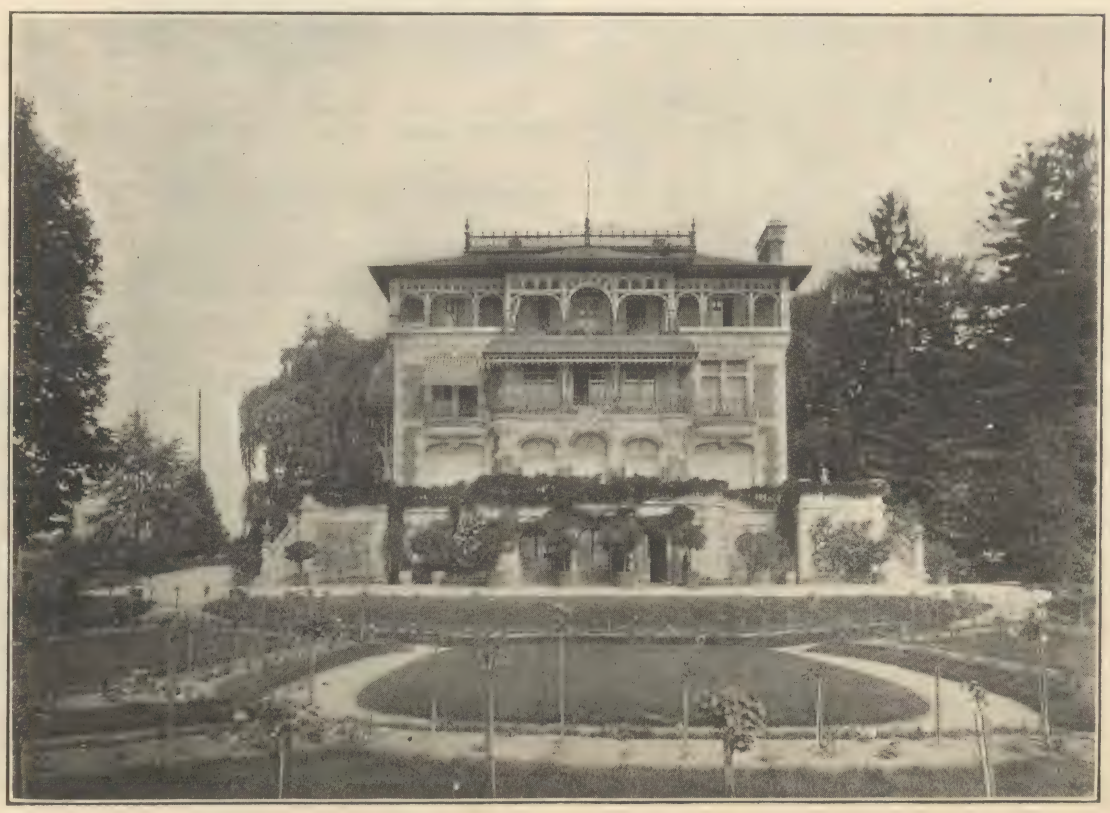
"Madame"—I now hesitated, for I was about to refer to that widely advertised $7,500 pen of White Orpingtons, "we read considerable in the poultry press about your purchasing for $7,500 a pen of White Orpingtons, and do you know that some people wonder if this pen of only five birds actually cost so much."

Madame could not quite understand, for she did not know—like you and I—that sometimes for advertising purposes a price is stated but not actually paid in full.

My office had received many letters asking for an opinion of this sale, which had been so conspicuously advertised in the poultry press alongside of a reproduction of Madame's letter which stated how to ship the pen. So I explained the matter and also told her how one could misconstrue her letter because nowhere did it state that she had paid this figure, but it contained the following "Please ship my $7,500 pen" which could mean that she valued it at this figure, but it was not proof that it had cost this amount.

"Yes, Mr. Lott, I paid $7,500 for the pen and it was sent with all transportation charges prepaid to Morges, Switzerland. The pen was then entered at the Lausanne show and captured the Champion Prize. I like Lady Helen best, but in Switzerland they prefer Victoria."

I never believed that a woman of Madame Paderewska's distinction would connect her name with any advertising scheme, and now I knew that I was right, simply because Madame had told me. And then I thought of the many doubtful ones and those letters of inquiry down at my office and I asked to see the receipt showing that she had paid $7,500. This was cheerfully shown me and now, with such positive proof no one should question further.



Madame Paderewska showed me a newspaper notice which stated that she had bred birds from this pen and they had received Lausanne Show awards. This displeased her, because, as she explained, she had not bred from this pen, but the very birds which she had purchased in America were the ones which had won and all credit was due to their original breeder.

"The pictures of my Switzerland home are in one of my trunks," said Madame, "because we sail Tuesday, but still someone can find which trunk if you care to see them."

I did, and the pictures were found and I have used them for the illustrations herewith published.

Madame Paderewska is doing grand work for the advancement of pure bred poultry, and I am glad to be able to publish in THE AMERICAN FANCIER these illustrations of her poultry plant, knowing that they will greatly interest both our American and European readers.

(Continued on Next Page.)

VILLA PADEREWSKI—Riond Bosson pres Morges, Switzerland

A Talk with Mme. Paderewska

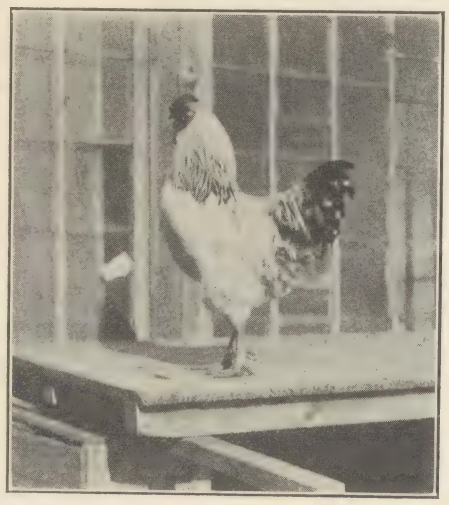
(Continued from Page 83)

Madame Paderewska's establishment is at Morges, Switzerland, on Lake Geneva. It is a quiet little Swiss town and they have no neighbors at Riond-Bosson. The palace, park and poultry grounds and the vineyard, orchards and farm cover 247½ acres.

Across the front of the house are the vast verandas, one tier above the other with wild creeping vines. Screened from the house by mammoth trees and tall hedges are the poultry houses. Everything here is under the supervision of "Archer." The center building shown in the illustration on cover page was designed by Ignace Paderewski, and is used for young chicks. No glass fronts are in any of the houses, but wire netting, and although curtains are in readiness they are seldom used. Next to these yards come the enclosure for the Golden Pheasants and then a large duck yard and then the goats and sheep, five of which were presented by King Edward of England.

Madame Paderewska hopes to be able to visit the next Madison Square Garden Exhibition and if so I have promised to accompany her, and if possible she will show here and at Paris and the Dairy Show, Islington, England.

Madame spoke of the poultry industry of Australia, France, Poland and Switzerland, where she is president of the Switzerland Poultry Association. And then with a feeling of tenderness she related how Monsieur Paderewski, who could choose a gift from the treasures of the world, had given to her on her birthday some more pets—"dear chickens."



As I listened to Madame talk about her birds and the different poultry shows she had visited, I knew that here was a true fancier, one that would do much for the advancement of pure bred poultry, not only in Switzerland but other countries.

I could not stay longer, and securing possession of my hat and gloves, I started to leave, and Madame, going with me to the door, promised to write Switzerland notes for THE AMERICAN FANCIER.

As I now write, I think of different interviews with distinguished men and women, not only in the poultry world, but other spheres, and I cannot, in this aftermath of thought, remember anyone more sincere in their work than Madame Paderewska in her endeavor to improve the present standard of poultry in Switzerland and restore to Poland, her country, its native fowl, strong and true to their original type.

A SUCCESSFUL breeder of Orpingtons writes the AMERICAN FANCIER that he has recently made some really remarkable cures of sick poultry by giving them the extreme of fresh air treatment, and turning them out into the sun and open air and compelling them to "rough it." He says that in the earlier days, when he was in the habit of putting sick fowls into coops and confining them in a dark corner of the hen house, as is quite the general custom, he usually lost nearly all these cases, but since he has adopted this fresh-air treatment he has made a cure in most every case.

Here would seem to be a very valuable idea for poultrymen generally to think about and to adopt. At any rate the AMERICAN FANCIER presents it to its readers for what it is worth.

Opportunities with Home Chickens

R. B. SANDO

THERE are few men but what are interested in reducing the living expenses of their families, and one way of doing this is by keeping a small flock of chickens to supply the family table with eggs and meat. The writer's start in the poultry business was made with a few hens on a back yard lot, and he knows from experience that home chickens are money savers. Counting the cost of feed alone, we found that we could produce our own eggs and chickens at a cost of not to exceed one-half that which we had been accustomed to paying on the market. Situated as we were, this was a decided advantage, and the same thing would probably be true in every case where the little time and attention required by a small flock would only be utilizing that which otherwise would very probably be idled away or wasted. While some people consider their time too valuable to look after even a few chickens, yet it is a fact that every man must have a brief intermission from business each day, and during this time some sort of a recreation, pastime, or hobby, differing greatly in character from that of his other business, is very desirable.

A few hens will be found to fill this bill very nicely, and, at the same time, if properly managed, will pay a small profit. Aside from the matter of cold dollars and cents, the pleasure of having a nice tender chicken whenever desired and eggs that are strictly fresh at all times, it is quite an item.

Anyone who has a little yard room and no chickens, is not living up to his opportunities. The cost of keeping such a flock is less than one would suspect on first thought, because the birds will utilize all the scraps and refuse material from the kitchen and table, which would otherwise go to waste, and they enable one to get back on his table this waste material in the form of good fresh eggs and juicy fowl. There is no better feed for poultry than table scraps, and any family ought to be able to furnish a large enough supply of this material to constitute a large part of the food necessary to maintain a flock of chickens of the size necessary to keep them supplied with eggs and meat. Sometimes, too, one has neighbors who will be only too glad to give him their waste materials, and will consider the relief from the task of disposing of them as sufficient pay for the scraps. Parings of all kinds of vegetables, refuse leaves of cabbage and lettuce, onion tops, small potatoes, stale bread crusts, and all such things which are usually wasted may well be utilized in this connection and will be found to give every bit as good results as would higher-priced materials.

Nothing elaborate or expensive is necessary in the way of a house for a small back yard flock of hens, although, of course, a nice house will add to the attractiveness of the place; but that makes no difference to the hens, so long as the homely appearing house is comfortable. A building ought to contain about one hundred square feet of floor space to comfortably house a dozen to fifteen hens, and ought not to cost more than $15 or $20, especially since waste material can often be utilized in its construction. A piano box poultry house (that is, a house made by joining together two piano boxes) makes a very serviceable and very cheap house for this number of fowls; in fact, as a general thing this type of house is the cheapest form available for a small flock. The addition of a window or two and a door is all that is necessary so far as the construction of the house itself is concerned, while the only interior fixtures that will necessarily cost any money are the roosts and nests. It is a very good plan to line the exterior of such a house with roofing paper, as this makes it materially warmer and more comfortable during the cold winter weather.

The number of fowls necessary to keep a family supplied with poultry and eggs depends upon the size of the family and upon their appetites for poultry products. As a usual thing, a dozen hens is a sufficient number for a family of four or five persons. About one hundred eggs a year per hen is what may safely be expected by the beginner with regard to the egg-production of his flock. One dollar a year per hen

1st Columbian Wyandotte Hen, New York, Dec. 1907. Owned by Nirvana Poultry Yards.

is the usual estimate of the cost of maintenance. Where all feed has to be purchased this figure is probably a little low in most sections of the country, but where use can be made of waste materials the expenses should not be this high.

One Mission of the Poultry Press

It is a fact, unfortunately, that a great many people look with much disfavor upon the business of poultry keeping. Such people may be roughly divided into classes. First, the people who keep poultry on farms, but merely as an incident to the general farm management. They have no regular poultry houses, no yards and no fixed system of feeding. The profits are necessarily little, and the trouble great. They accordingly look upon poultry as a nuisance, and laugh at the idea of changing their mongrels to pure-bred fowls and then making comfortable quarters for them and feeding systematically.

Another class is composed of people who do not keep poultry and do not know that there is any way to do it except in the slipshod manner of the careless farmer described above. It is not to be wondered at that these people see pictures of disgusting situations when anyone speaks of keeping poultry.

We conceive it to be one of the chief missions of the poultry press of today to strive in every way in its power to correct these various wrong impressions of the poultry-keeping industry, and to instill into the minds of thoughtful people generally the fact that poultry raising and poultry keeping, when properly intelligently and systematically carried on, is one of the prettiest, cleanest, most interesting and most profitable pursuits in which a person can become engaged.

Laying hens should not be over-fed or have too warm quarters as it will have an unfavorable effect on egg fertility. Oftentimes an egg will be fertile and still the germ may not have sufficient vitality to produce a strong chick under ordinary incubator conditions.

* * *

The following has been tested and we consider it a reliable receipe. One and one-half pounds quick lime (previously burnt) one-quarter pound common salt dissolved together in two gallons of boiling water. When cold mix in one-third ounce of cream of tartar. The eggs can be put in the mixture or they can be put in some vessel and the mixture poured on them. Eggs so preserved should keep well for seven to eight months. The mixture must cover the eggs, and as it evaporates a little water can be added. If an egg becomes cracked when in the mixture it must be removed at once.

* * *

Thirteen parts of albumen, ten parts of fat and two parts of other solids constitute the egg. There is no starch or amyloid matter in an egg. If such ingredients make good food for the chicks, why not for the chicken? The chick absorbs the yolk part immediately before leaving the shell and is it not common sense to follow nature and provide the diet nearest to this for the earlier stage of the chicken's growth?

* * *

Persistent advertising is bound to win out.

* * *

Recently we received a letter from Sandusky, O., telling us that ducks were dying by the hundreds in the marshy regions bordering on Lake Erie. Examination finds in the head feathers of many of the ducks a small insect not unlike the flea. Whether or not this is responsible for the destruction cannot be determined.

Columbian Wyandottes, Owned by Nirvana Poultry Yards, Stamford, Conn.

THE HOUDAN FOWL AND ITS BREEDING

(Written Expressly for The American Fancier)

By Rev. Carl E. Petersen

To breed any breed or variety of a breed, up to Standard requirements, demands first of all a Standard, for if every man or woman who breeds fancy fowl was in possession of this book, which, after all has been said regarding its faults, still remains the only guide by which the unexperienced breeder of fancy fowl may find out what is demanded in the birds he is breeding.

Every breeder has his idea about what a certain breed ought to look like, but the standard, without mixing matters, gives the commonly accepted interpretation of all the necessary points of excellence that in all their component parts makes up an attractive whole, which in form and color must be firmly fixed in the mind of the fancier if he expects to make a success.

It would seem that the small cost of this helpful book would be willingly paid but fact is that only a very small percentage of poultry fanciers have a copy of the book in their possession.

We get letter after letter inquiring about certain points in the Houdan and asking for information what the standard says about it, and goodness only knows how many hours it has taken out of our time for the past sixteen years to answer these questions which in most every case never would have been asked if a Standard had been at hand.

It is equally as well a fact that a great deal is done by advertisers to throw out suspicions that will lodge in the mind of the tyro and cause him to wonder whether he after all has the fowls that he thought he had, here for instance is an example: "No Polish or Creve Blood in Their Veins," which would make a real Houdan fancier smile on both sides of the water for to say the very most that can be said regarding this matter as to the origin of the Houdan every authority agrees that the old Caux fowl had something to do in its making and the old Caux fowl was the Creve and which at that time by many was called the "Black Polish" in which I don't fully concur for many reasons that I cannot here give, but suffice it to say that the origin is very obscure and might without contradiction be called unknown, and that there is not the slightest doubt that the Creve was used at some later day over in England and that if it was found necessary to make statements of the above kind it would appear to be more correct to say "No recent Creve or Polish blood in their veins."

If an outcross was desired to improve either size or color in the Houdan we could mention several fowls that would be far more suitable to accomplish this object than either the Creve or the Polish.

To any one who does not know what goes into the making and the history of the Houdan let me advocate the following volumes which will give you much good information and set your mind at rest on a good many questions:

Lewis Wright: "Book of Poultry."

Harrison Weir: "The Poultry Book" (Part XV).

L. C. Verrey: "French Breeds of Poultry."

Charles Lee: "The Houdan Fowl" (Now out of print).

All of which, but the last mentioned, can be obtained at the office of the journal for which this article is written.

We have followed the ups and downs of the Houdan for the past sixteen years; listened to the different controversies regarding color and looking over the different articles written on the subject by all the leading breeders which we have on file cannot but help to see that it is not so much a matter of color as the inability to produce what the standard calls for, and for this reason alone change after change has been proposed so as to make it easier for those that had failed in making correctly the matings that would produce the desired effect.

One of the errors of some of these breeders, and some of them of long standing in the fancy, was to breed an almost black bird, and let the moult produce what their skill was not able to encompass, for it was, of course, an easy observation that the darker the fowl was bred the more sure was she of moulting out into the desired color requirements.

And I say "she," knowingly, because it is mostly in the female line that color is not staple as the males keep their color much better. The Houdan is not the easiest fowl to breed in perfection, but it does not present any more difficulties than many other varieties, yet it is with the Houdan as with other breeds, that its votaries know what constitutes a good exhibition specimen, but how to mate their stock in such a way as to produce it themselves they cannot, and it is this lack of skilfull selection in the breeding pen that causes much of the trouble.

A PAIR OF THE EARLY FRENCH HOUDANS

As they looked when first imported in the early sixties

A NOTED ENGLISH PRIZE WINNING HOUDAN COCK

Winner of Silver Cup at Crystal Palace Show. Such a bird coule not win at any of our shows; note monstrous comb, but which is good style in England

The very light Houdan is easy of production; in fact promiscuous breeding will produce it in two seasons.

The very black bird can also be produced very readily by simply selecting the very dark birds for breeding, but by so doing, the leg color will invariably be black as well as the plumage which is a great detriment to the Houdan, and according to the accepted rulings of the leading judges a disqualification.

It is, however, true that after the first moult the leg color will change into a blue or dirty gray, but this is not "pinkish white," as the standard calls for.

Now where proper mating shows to the very best advantage, is to produce a very dark bird that retains the proper leg color and at the same time shows a neat, clean mottling, the mottling evenly distributed and very small in circumference, for when the fowl mature she will then ripen out into a beautiful bird that will remain so after many succesive moults.

The light Houdan with the strawberry comb we have had, and did not want, the American Fancier wanted something better and after years of selection we finally succeeded in establishing a strain of birds that has come to stay, and the day will never come when the American Fancier will go back to what was at that time called the French Houdan. The French Houdan today could not win in any of our show rooms, nor could the English, the first one is entirely too light to please, and with a monstrously bad comb which is not standard, the English Houdan is much better in both shape and color but has the butterfly comb, which in our country is not tolerated.

The neat V shaped comb is the proper standard comb for this country and our fanciers want nothing else. To give the reader an idea of what both the French and English Houdans look like the two accompanying illustrations will do more than words to establish in their minds the difference between them and our own beautiful birds.

The pair of birds are taken from a French volume on poultry and are a pair of noted winners of years ago, but they have the same general type of the modern French Houdan.

The cock bird is a noted English bird that has won silver cups and blue ribbons at the Crystal Palace show in England, notice the color of both crest and plumage and the monstrously large comb, such a bird could never receive even a C in any of our American shows.

"A little learning is a dangerous thing" but doubly dangerous when in all earnest applied to the undoing of work that it took the brain and skill of a whole line of American fanciers nearly fifty years to produce, we have a bird that for style and elegance and aristocratic bearing cannot be excelled anywhere in the world and what we have got we will keep intact and with it the memories of the men that laid the foundations for an improved Houdan fowl on which we today are building at least we fanciers who know what true Houdan type is like.

As to the crest, beard and muffling, I have just one word to say, namely, that without these distinguishing Houdan characteristics in full perfection the Houdan loses its attractiveness and much care should be exerted to breed these as near correct as possible.

I saw not long ago in a journal the following reference to this matter, "it takes more than a crest to make a Houdan," which is an obvious truth, but as a *fancier's bird* all the other things do not count, except when accompanied by a well-shaped large crest, beard and muffling, and the last feature is just as distinct as the other two, for beard should be long and pendulous, and the muffling should curve around up back of the eyes, full and bushy, not a few feathers split in the middle, which is neither beard or muffling.

I may also say that if you want to breed a good full beard and large, heavy muffling, then never use for breeding a bird with large wattles—it is a sure means of finally breeding out both beard and muffling.

The same holds true as to size of Crest and comb must be subdued to produce a very large crest, the larger the comb the smaller the crest will become until after a few years it will be very scant and particularly in the front.

(*Continued on Page 86.*)

(Continued from page 85.)

It is not nature's way to produce both, they are ornaments of use in sexual selection and the two cannot exist together in perfection. Large comb and large wattles are the signs of degeneration in the former, or perhaps more correctly stated, reversion to original type, which must be guarded against.

Another thing not generally known about the Houdan is that it continues to improve in look and style as it grows older and is not in its full perfection till the second year and where a two or three year old cock bird that has moulted his feathers successfully, is used for exhibition he is a very hard bird to beat by his younger competitors, as his furnishings are more complete crest, full and heavy and in body he is filled out into the much desired type of a show bird.

It is the same with hens—they are much finer birds in their second year, and where, as sometimes it is the case, that pullets and hens compete in breeding pens, the pens containing pullets stand little show in comparison with hens if these last are well bred specimens.

But as our space is limited it may be well to finish this article by saying that there never has been a time for many years where as at the present the Houdan fowl was more popular, it is fast becoming the fowl that furnishes the poultryman who wants not only eggs and meat but fine feather as well. What he desires is to make the utility fowl par excellence and the fancy fowl as well, combining in itself what few fowls do, the saying, that beauty and utility goes together.

East and West there is hardly a show, and we have examined the show reports, where the Houdan is not represented, and this, when some of the supposed more popular varieties are only conspicuous by their absence; tried and true, the Houdan is one of the old stand by's that refuses to be ignored, and by sheer merit has pushed to the front.

Tennessee State Fair Show.

Will hold their poultry show at Nashville from September 21 to 26th. They have closed a contract with Spratts Patent Company of Newark, N. J., to coop the show, and undoubtedly this will be under the personal supervision of Mr. T. Farrar Rackham. Special effort is being exerted to have the largest turkey exhibit ever held in the world. At the State Fair the Tennessee Mammoth Bronze Turkey Club will hold its 2nd Annual Meeting. Mr. John A. Murkin will have charge of the poultry department.

* * *

It gives us great pleasure to inform our readers that the June 1st issue of the AMERICAN FANCIER will contain an illustrated article on Bantams by James B. N. Fitch, president of the National Bantam Association.

Sunswick Poultry Farm

Can be reached by the Lehigh Valley R. R., or the New Jersey Central R. R. with station at Plainfield, or the Penna. R. R., with station at Metuchen.

I took the Central of New Jersey and was met by Mr. Delafield at the Plainfield station and after a short drive arrived at the poultry farm at South Plainfield and here we found Mr. G. J. May, Manager, and then started to go through the first pen, when we noticed our old Madison Square Garden friend, "Pride of Kent," who made the sensational winnings in January, 1907, with carrying off first prize in his class and two specials, also silver cup for best Black Orpington male and silver cup for best Orpington in the show.

The poultry farm contains 13½ acres and is situated three-quarters of a mile from the homestead. In one of the large buildings the prize birds are housed. This structure is divided into fourteen breeding pens with runs 100 feet long by 20 feet wide. About 3 feet up from the ground the wire netting between each run is covered with heavy canvas. This keeps the birds from fighting. Further on we went through eight more houses which were 32 feet long. They are used for breeding and the runs are 32 feet wide by 100 feet long with fruit trees planted in each.

One of the Many Chicken Houses and Runs at Sunswick Poultry Farm

Then there is the Cockerel house, 100 feet long. This contains 17 runs, 50 x 5 and over the center of each run is a wide timber roof to act as a shade. Then there are many feed houses and other poultry buildings scattered throughout the farm which is devoted entirely to poultry, no crops being raised. All the houses are piped with running water.

Sunswick Farm devotes their entire energies to Orpingtons—the Black, Buff and White, and we were informed that they had 350 to 400 matured stock and about 400 young stock.

It was with great pleasure I noticed how affectionately Mr. May handled the birds that came within reaching distance. Many of them seemed to know him, and those that would run as others approached did not appear to mind Mr. May's presence; in fact, in most cases they stood still or came toward him.

I was particularly interested in three Black Orpington cockerels; also one Black Orpington Hen by Pride of Kent and I will watch with interest to see what awards they receive at the coming poultry exhibitions. I also saw many other Orpingtons of rare quality. One, a pullet that has all indications of developing into a winner. In another pen "Nabob" lords it over with 10 pullets by Pride of Kent.

Mr. May reports a very successful season so far and also that the egg fertility has been about 80 per cent.

Sunswick Farm for the last two years has cut a wide swath in Orpington alley and won 27 ribbons in Madison Square Garden, including Buff Orpingtons. 2 cock, 2 cockerel, 2-3-5 pullet. In Black, 2-3 cock, 1-3 hen, 3 cockerel, 2-3 pullet. White, 1-3 cock, 2-5 hen, 2 cockerel, 5 pullet. Also 37 ribbons at Boston and creditable winnings at Trenton.

Eating time was drawing near so we had to leave Mr. May and drive over to Mr. Delafield's house, and at the dinner table I found, as is generally the case, that not only the man of the family but the women as well were taking a deep interest in the poultry. Mrs. Delafield and Mr. Delafield's mother are very enthusiastic and can tell you the good points in not only Orpingtons but other varieties.

Pleasant recollections of my visit will long remain with me.

Augusta, Georgia.

The next show dates for the Augusta Poultry Association are November 2 to 7. Their last show was known as the "Quality Show of the South." The judges will be T. Reed Parish, C. W. Fowler and J. S. Jeffrey and will place the awards by comparison judging. W. A. Herman is the secretary of the Association.

* * *

Just received mating list of the Cottage Bantam Yards, Vineland, N. J. (Fincke & Thornton). This catalogue contains sixteen pages, with printing on one side only. Also many half tone illustrations of the poultry plant and individual birds. The cover is made from what is known to printers as crepon paper.

Adrian, Mich.

At the recent annual meeting of the Fence Town Fanciers' Club of Adrian, Mich., J. E. Holyoke was elected president, George L. Alban, vice-president; F. V. Judson, secretary; D. D. Eldredge, assistant secretary; R. J. Stange, treasurer.

Show dates, December 8 to 14, 1908. Judges, Chas. Cram and J. W. Mulinix. F. C. Greenwald, supt.

The club is composed of enthusiastic breeders, is a member of the A. P. A., and expects to make this year's show even better than their last.

Mr. George May Manager, and "Pride of Kent" the Sensational Winner of Sunswick Poultry Farm

---

Catalogue of the National S. C. Minorca Club

Is now completed. It contains sixty-two pages with many half-tone photos printed in brown ink on enamel book paper. It makes one think of that high grade literary and pictorial magazine published by Burr McIntosh. Mr. H. W. Billard, the club secretary, did the work and is to be highly commended, as it is about as artistic and elaborate a specialty club catalogue that has ever come before our notice. It was very expensive to get up, and therefore we hope all interested in Minorcas will enclose 6 cents in stamps when ordering one. Mr. H. W. Billard's address is Brooklyn Hills, L. I., N. Y., and he will be pleased to mail a catalogue upon request. Better write him.

Rutherford, New Jersey,

Will hold their next Poultry Exhibition under the management of the Rutherford Poultry and Pigeon Association from December 16th to 19th.

Some Points In Regard to Chicken Rearing.

The one great thing to be desired in the rearing of a chicken is that it may suffer from no check of any kind from the time it emerges from the shell until it arrives at maturity, but that it should make steady progress all along from first to last. There are many ways in which the progress of a growing chicken may be checked, from the ill-effects of which often it never recovers. When bred from healthy and vigorous stock of mature age, chickens have every chance to do well, and in order to make the best of them no stone should be left unturned to aid the birds in making growth and development. Here are a few points well worth remembering which will aid the progress of a growing chicken greatly: 1.—A run on entirely fresh ground which has never previously been occupied by fowls. If the ground abounds in insect life it will be all the more beneficial. 2.—A change to different quarters every few weeks is another aid. This will often help a bird to revive when it seems to be arriving at a standstill. 3.—Variety in the bill-of-fare is another important point. Chickens tire of the same diet day after day, and to vary this as much as possible should be a matter of careful study. All these points are well worth the attention of every poultry keeper, and if they are carried out, this extra care will result in no small gain.—*Feathered Life* (England).

Reading, Pa.

The fanciers of Reading and vicinity have organized a corporation known as the Reading Poultry & Pigeon Association for the advancement of poultry.

They have elected E. B. Ulrich, president (the well-known pigeon judge); Clarence DeTurk, first vice-president; W. H. Orr, treasurer, who is known throughout the States as one of the most prominent Turbit breeders; and W. L. Fulmer, secretary, breeder of R. I. Reds and Buff Leghorns.

They have already secured the rental of the largest hall in Reading, a hall specially adapted for the purpose of holding poultry shows, which will be held from December 7th to 12th at the Auditorium.

Paterson, New Jersey

Recently held a meeting and found it necessary to change the dates of their coming show from the first week in December to the second week.

Causes of Poor Hatches

AS the breeding and hatching season comes around each year, we are confronted with many inquiries as to the causes of poor hatches. In nine cases out of ten perhaps it is not the fault of the incubator, although in most cases the incubator gets the blame.

Among these complaints we find that chicks die in the shell, or die off rapidly when a week or ten days old, etc. Many cases show chicks of low vitality, making the mortality during the early life of the brood larger than it ought to be. We are pleased to note that as breeders are becoming more expert in the hatching of chicks and in the use of incubators and brooders, these complaints are less numerous.

We believe that poor hatches in most cases can be traced back to the poor condition of the breeding stock which produced the eggs. The strength of the chick dates back to months before the egg is laid. It has been demonstrated to hundreds of now successful poultry raisers that strict attention and the best of care must be given to the breeding pen. The old notion that "an egg is an egg, and any egg that has been fertilized by the male ought to hatch a chick that will live," is fast being exploded, says the *Wisconsin Agriculturist.*

"Weak poultrymen" are the main cause for "weak breeding pens." The health and good breeding condition of the breeders that produce the eggs is not difficult to obtain if only the poultrymen use a little common sense. These considerations are just as important in the breeding and rearing of poultry as it is with any other stock.

Some of the causes of weak breeding pens are inbreeding, breeding from undersized or immature fowls, overfeeding, improper feeding and unsanitary conditions—lice and mites. All these things can be prevented if taken in time. But if neglect and carelessness along these lines has fastened itself upon the flock, then it is hard to get the stock into shape, and often the attempt to condition the breeders is begun so late that the hatching season is upon us before the birds are able to produce the strongest eggs.

Line breeding is all right if it is practiced along scientific and systematic lines, but the pedigrees of the fowls must be kept so that the blood is not crossed too closely and too often. Pure bred stock purchased from reliable fanciers who know how to breed their fowls and still retain the highest constitutional vigor often falls into the hands of amateurs and then, through ignorance of the blood lines, the mischief begins. For instance, a few sittings of eggs are bought of a reliable strain of fowls. Chicks are hatched and a cockerel and the pullets are mated from the same hatch, the purchaser arguing to himself that it will not matter so much the first year. Perhaps this is true, and perhaps it is not—all depending upon the former breeding. Suppose the breeder from whom the stock or eggs are bought has been following a line of inbreeding for years, what then? Care in the selection of stock is all-important. We have seen flocks mixed by too close inbreeding. As one writer remarks, "Predisposition to tuberculosis is a bane to close inbreeding, whether of humans, cattle or fowls."

Breeding from immature stock is another cause of poor hatches. To avoid this, of course, breed from hens that have shown their constitutional vigor by having passed through a vigorous moult and the rigors of winter and are constantly strong. Pullets are all right to breed from if they have been fully matured and have begun to lay before winter sets in. Pullets that are late hatched and do not come to laying maturity until the spring is upon us are not strong breeders and are almost certain to produce weak chicks. We must remember that the vitality of the chick depends as much upon the female that lays the egg as it does upon the male that fertilizes it.

Overfeeding or improper feeding are often the causes of weak chicks. If the pullets are not laying, and we think that it is time they began to lay, we begin by forcing them with foods rich in protein, or green cut bone or beef scrap. Or, they may be laying, but the temptation comes to "force them for eggs" by feeding them a larger ration. Overfeeding or feeding to rich a ration is almost certain to loosen the bowels and weaken the birds; or to crowd the digestion too hard, and result in a case of chronic indigestion and lower the vitality of the hen. The vigor of the chick is, as a result, weakened.

Along with these things, too little exercise is another cause. In the natural wild state fowls hunt and scratch for every kernal of their living. They must search for every seed, bug, insect, etc., that they obtain. This is one reason why wild fowls are so strong and vigorous. The nearer we are consistent with Nature's plan, the more vigorous will our stock be. Accompanying this is lack of fresh air. Too close housing causing unsanitary conditions destroy the vigor that Nature provides for in the wild fowls. That is why curtain-front poultry houses have triumphed so signally over the old style "snug and warm" house of several years ago. The former supplies the fresh air and stimulating exercise that results in vigor and health. All these things should be considered in the care of any flock of poultry, but more especially of the breeding pen if you want to maintain the vigor and strength of the fowls and thus secure strong, vigorous chicks that will live to maturity.

Columbian Wyandotte Hen "Beatrice," winner of first prize at Hornell last year as a pullet. Bred and owned by L. B. Sweet, Perry, N. Y.

Published by

LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

EDITORIAL AND BUSINESS OFFICE REMOVED.

THE photographic reproduction on title page of this issue illustrates the Etablissement d'Aviculture de Mme. Paderewska Riond-Bosson pres Morges, Switzerland.

On another page we publish a description of Riond-Bosson and we are glad that we have been so fortunate in being able to secure these pictures as we know they will interest both our American and European readers.

The palace, park and poultry grounds cover 43 hectares (107½ acres) and the vineyards, orchards and farm lands 56 hectares (140 acres).

From Riond-Bosson can be seen the snow-capped Alps and then beneath the warm, wonderfully colored surface of Lake Geneva.

Sometime I hope to visit Madame Paderewska at Switzerland and will write a detailed description of her poultry plant with photographs of the poultry houses and individual prize birds.

Madame Paderewska has very kindly offered to write Switzerland notes for THE AMERICAN FANCIER, which we know will be appreciated by our readers.

In addition to making a study of the poultry industry of Switzerland, Mme. Paderewska has traveled in many foreign countries and also made an extended tour throughout America with Ignace Paderewska, the world-famed pianist.

During her tour in this country she was accompanied by Mr. R. C. Heck, her American representative, who, by the way, is also a poultry fancier and was of great assistance to Mme. Paderewska in selecting different fowl for her Switzerland establishment.

It is very pleasing to know that Mme. Paderewska, with millions of dollars to satisfy any fancy, has, in preference to all others, centered her endeavors and affections with raising pure-bred poultry.

* * *

From time to time we hear of many new theories, but we would like to hear that these new theories have been tried and proven. A theory is of no value until it has become an established fact. We hope our readers will think this matter over carefully and take up some new theory that they believe in and work at it until they have proved it to be a success. Or in a case where they doubt the correctness of a certain theory, work at it until they have positively disapproved the existing theory.

Election of Officers of the American Poultry Association.

At the annual election for the year 1908 the following was the result:

President, Chas. M. Bryant, 706, against H. S. Babcock, 69; first vice-president, H. B. Donavan, 509; O. L. McCord, 91; J. C. Williams, 159, O. P. Bennett, 2; second vice-president, Miller Purvis, 493; D. M. Owen, 166; W. W. Browning, 103; secretary-treasurer, Ross C. H. Hallock, 471, W. S. Russel, 282; John Brinkman; members of executive board, T. E. McGrew, 658; Geo. S. Barnes, 452; Reise V. Hicks, 490; James A. Tucker, 240; Horace Atwood, 232; H. B. Savage, 91; Frank Langford, 82; Chas. H. Ring, 6; D. M. Owen, 3; W. R. Graham, 1; W. A. Doolittle, 1. Therefore the officers for 1908 are: President, Chas. M. Bryant; first vice-president, H. B. Donavan; second vice-president, Miller Purvis; secretary and treasurer, Ross C. H. Hallock; members of the Executive Board, T. F. McGrew, Reise V. Hicks and George S. Barnes.

* * *

Last week a fancier from England called at the office and, talking over the day-old chicken industry of his country, said that he recently heard from good authority that last year over 300,000 day-old chicks had been sent by express in ventilated boxes. Many of these chicks were sent to Scotland and Ireland and the death rate on the journey did not average seven-eights of one per cent.

* * *

It is with deep regret that we have to herewith publish the fact that Mr. Gilbert M. Gowell, who recently severed his connections with the Maine Experimental Station, committed suicide by shooting himself while suffering from melancholia. Mr. Gowell was sixty-three years old and widely known as a poultry expert.

* * *

Secretaries of country fairs and poultry associations in deciding who to appoint as judge should be most careful in their selection, and not be influenced by politics.

* * *

There is no "best breed," although many poultrymen will try to impress upon you that the breed they raise is the best. Of course some breeds are better than others, but as far as we know there is no "best," as everything depends upon the strain. A certain number of poultrymen may keep the same breed with different results.

The Recent Chicago Show

Has sent out notices that their last show did not bring in enough money to pay the premiums, but these will be paid next January.

Dunmore, Pa., May 7, 1908.

Editor of AMERICAN FANCIER,
New York City, N. Y.,

Gentlemen—I have read with considerable interest Mr. Harry Miller's letter of May 1st in your valuable paper, in reference to Mr. L. L. Bright's New York Pullet having taken first pen in Scranton show as Mr. Miller says. I would like to make one or two corrections in his article as published. In the first place I am sure Mr. Bright's N. Y. Pullet was not in the Scranton Show; for I saw her on Mr. Bright's premises while the show was in progress. In the second place Mr. Miller is mistaken with reference to the Special Cash Prizes. In Mr. Miller's article he credits Mr. Bright with one cash special, while the fact is Mr. Bright took two: a $5 Special for the best cock, and another $5 Special for best display in Columbian Wyandotte class. Mr. Miller took one $5 Cash Special for best pullet—as he says.

Now, Mr. Editor, in all spirit of fair play I hope you will publish this article in the next issue of the AMERICAN FANCIER. In am

Yours sincerely,
HOMER B. HAND,
331 Butler Street, Dunmore, Pa.

* * *

St. Mary's, Ohio.

The St. Mary's Poultry and Pet Stock Association will hold their next annual show, November 25th to 28th, 1908, with the veteran Judge Ben S. Myers of Crawfordsville, Ind., to place the awards. Local interest will be increased by the holding of a Corn Show at the same time, and in connection with the poultry exhibit. One of the largest shows ever held in this section is expected. W. L. Smith, president; F. F. Aschbacher, secretary.

* * *

The American Buff Plymouth Rock Club has a new system of dividing the United States and Canada into seven districts. Each one will have a vice-president and each district will be given a Cup to take the place of one National Cup, as heretofore.

* * *

January 6th to 13th are dates for the Fourth Annual Show of the Yakima Poultry Association, at which W. C. Denny will place the awards.

* * *

Mr. James Glasgow, of Mountainside Farm, Mahwah, N. J., called at the office last week and wonders if Mr. Rowland Story now orders when thirsty a Scotch Minorca or a Scotch high-ball. Glasgow is well known in Bantam and Fantail alleys, but seems to show much interest in Story's experience with Minorca eggs from the high seas.

The catalogue of L. B. Sweet, Perry, N. Y., is well illustrated with half-tone cuts made by A. O. Schilling, and it is also well printed on white paper with a tinted cover. Mr. Sweet will be pleased to mail one upon request.

* * *

Athens, Ohio.

Second Annual Poultry Show will be held from January 19th to 23rd, under the management of the Southern Ohio Poultry Association of which W. C. Hoodlet is secretary. This association will also have charge of the poultry exhibit at the Athens Country Fair, which is held August 10th to 13th, about four months previous to the Second Annual Poultry Show.

* * *

KANSAS CITY, MO.,
May 6, '08.

Mr. Leonard W. Lott,
Editor THE AMERICAN FANCIER,
New York City.

DEAR SIR:

Note that you had an interview with Madame Paderewska and that she convinced you that she paid me $7,500 for a pen of my "Crystal" White Orpingtons. You wanted to know why I did not make this clear to the public long ago. I got the money so what is it to me what the other fellow thinks. Quite a number of Poultry Editors have visited my farm in the last two or three weeks in reference to this matter, and I took them down to the Bank and convinced them. Some people seem to think that was an awful big sale. I don't when you stop to consider the kind of birds Madame Paderewska got. Let me add right here, that whenever a breeder raises birds like I sold Madame Paderewska he don't need to go far to sell them for a thousand or two thousand dollars apiece.

Show me a hen that will equal "Peg," my famous $5,000 hen, that has been spoken of by over six thousand newspapers in the world within the last three months, and I will buy her and pay even more for her. You take, for instance, my "Crystal" White Orpington Cockerel that won Sweepstakes at the late Chicago Show over all White Plymouth Rocks, White Wyandottes, White Leghorns, in fact over all chickens in the American, Asiatic, Mediterranean and English Classes, competition open to the world.

Now, what is a bird like that worth? If I were to tell you that I positively refused $10,000 for this bird from a fancier who is thinking of taking up the White Orpingtons, you would have to be convinced the same as with the Paderewska sale. The only difference was, he wanted me to take $3,500 in cash and the balance of sixty-five hundred dollars in notes, which did not suit me.

Now, the public would say, how is a breeder going to get his money out of a $10,000 bird. You know, Mr. Lott, what that bird would be worth from an advertising standpoint. I showed several Poultry Editors, that visited me lately, that we were returning money daily to people that were sending for settings of eggs, and you must remember that we get as high as $30 and $45 for a setting of eggs.

Mr. Lott, we could have sold over three thousand more birds this season if we would have had them. We know what advertising means. Advertising is what brought about the sale with Madame Paderewska. I also must tell you that I just received a clipping from the *New York Journal*, date April 27th, wherein I see that Madame Paderewska's birds won first prize at Lausanne, Switzerland. Now that is very gratifying to me.

So thanking you for your letter, and always glad to hear from you, I beg to remain,

Yours very truly,
ERNEST KELLERSTRASS.

Great Falls, Mont.

Next show will be held January 4 to 7. George Holden will judge. At the last poultry exhibition held at Great Falls, in January, 800 fowl were exhibited. White Wyandottes, White Rocks and Buff Wyandottes were the largest classes.

The June 1st issue will contain an illustrated article on Bantams by James B. N. Fitch, President of the National Bantam Association.

MR Escoffier, the great French chef, while in New York was asked what he found to be the best American dish. Mr. Escoffier replied, Philadelphia squab, and further stated such cannot be had in all Europe or in any other place, and in honor of it I have composed a new dish. This is how it should be made: Fresh noodles boiled about ten minutes in salted water; dry them and add butter and Parmesian cheese grated fine. Serve in timbale crust half full. Fill the timbale with filet of squab and crabfish, with cream sauce.

Squab served in the many different styles is a most delicious dish and the demand for it is increasing every year and the market price is most staple. Although many have started squab plants with or without success, the fact remains that the demand is more than the supply, and when a man as noted as Mr. Escoffier pronounces it America's leading dish we hardly think the squab industry will suffer for years to come.

Unlike the Belgian hare, the squab is a most dainty and tasty dish. We all remember the Belgian hare craze which was started by alluring statements of their value for the pan. Although the hare was served in many styles the public didn't relish them, and their downfall was as quick as their step to prominence.

Twenty or thirty pairs of homers can be kept with very little trouble or expense and the table can be supplied many times during the year with squabs which can be served in many different styles found in any recipe book.

Breeding squabs for the market is another proposition and is a business pure and simple which requires both capital and experience to make it a success, and then it must be on a large scale—say from 1,000 pairs and upwards. One must also have the buildings and suitable location for a successful plant, but to be able to furnish your table with a dinner now and then nearly any small yard is sufficient space.

* * *

There is no doubt but that the different specialty clubs have done much in bringing their varieties before the public. The fancier hardly realizes the amount of work necessary to make a club a success. This work is, in nine cases out of ten, left to the secretary, which should not be. Every member should take an active part in the club's welfare. To progress it is necessary that special inducements be made for the novice, or beginner. This is too often neglected. The funds of the club are spent for cups, cash specials for competition amongst a few, and in some instances a very few, indeed. Of late years in nearly every variety we have one or two deck sweepers, and the rest—well, they continue to breed a few, but with little or no heart in the variety. This has happened in a number of varieties and has had a most disasterous effect. In England we find a very different state of affairs. We will find the same fancier beaten three or four years ago showing with all enthusiasm and with the result each year that improvemnt is made and the competition is stronger. There are a number of varieties which have made rapid strides in America. Take for instance the Dragoon, Exhibition Flying Homer, Jacobins, Fantail and Pigmy Pouters and a few other varieties. Helmets have gained favor with many, while Carriers with others. But in most varieties, of course with some exceptions, the variety is pushed for a time and then quietly passes to the Any-Other-Variety class.

* * *

Wm. Wamsley of Vineland, N. J., has a pigeon's egg 6¼ by 7⅜ inches in size. Inside the shell was found the meat of an ordinary egg and inside of that a perfectly formed pigeon egg of natural size, with a hard shell and perfect form. We have heard of many freak eggs but this is most extraordinary.

* * *

Pigeon Paused in Tower Hawks Own.

The remains of a carrier pigeon, which had stopped for a few moments to secure rest in its flight without realizing its dangerous position, was found today in the tower of the Post-office Department building by George F. Shaw, the assistant superintendent of the building, while making his rounds of inspection.

The head, wings, and legs, picked clean, were all that remained of the pigeon.

The pigeon made the mistake of poaching on the preserves of a family of hawks that have made their home in the tower for several years. There are four of them, a proud, clannish family. They feast daily on the pigeons that they catch on the streets in the rear of the department building, and, being no respectors of persons or birdships, they made meat of the carrier which had inadvertently appeared in their midst.—*Washington Times.*

* * *

Not contented with owning one of the best collections of both crested and plain Helmets to be found in America, Mr. A. E. Robst has hunted in the wilds of Germany for suitable outcrosses in the breeding line to perfect the Hawthorne strain. It is just this spirit which has done much to improve American-bred pigeons. The breeder today who believes he cannot improve his strain is in error, and his downfall will come sooner or later. We often hear the expression, "I can't improve my present strain," and from the "wise ones." We call to mind one of America's leading breeders of a few years back who by some strange coincidence had this thoroughly impressed on his mind, and sad to relate, in three years was down and out, as the expression goes, in the fancy. New blood of the right sort will always improve any strain, and has done much to perfect the pigeon as we have them today.

PIGEONS

FOR SALE—A PEN OF 25 PAIRS MATED Homers; banded, listed, ready to breed; this stock cannot be excelled; the matings are guaranteed and we will refund money and pay return express charges if not as represented. The Rockaway Squabary, Rockaway, N. J.

SHORT AND LONG FACED TUMBLERS in Almonds, Kites, Mottles and Selfs, Parlor Tumblers, Single, Double and Rollers, High-flying Tipplers, Birmingham Rollers, White Fantails, English Carriers, Jacobins and choice Squab breeding Homers; also, Game and Cochin Bantams. Frank W. Albrecht, Kingston, N. Y.

FOR SALE—12 OF MY LATE 1907 hatched Flying Homers, trained from 30 to 60 miles, at $3 per pair; to every one purchasing two pair I will give a pedigreed Hen, flown at least 500 miles; the 3 premium birds all diploma winners; write. Earl Hepler, New Bethlehem, Pa.

No more birds for sale until November.

Dr. Fred'k C. Peterson, Smithtown Long Island N. Y.

Your Pigeons will do well if you give them FOUSTS HEALTH GRIT, in use for 18 years

A preparation necessary to the digestive nature of cage birds, combined with medicinal properties that insures health and sturdiness. Most all the large pigeon breeders use it and one says "of course, there are lots of other grits cheaper, but there are *none as good as Foust's.*" No other grit or medicine needed. Send for free sample and watch the pigeons eat it.

$2.00 PER 100 LB. SACK, F.O.B., CAMDEN.

GEESE

TOULOUSE GEESE—PURE BRED PRIZE winning; eggs for sale; 5 eggs for $2.50. A. S. Dennison, Manager, Warwick, R. I.

HAMBURGS.

RICHARD OKE, BOX 361, LONDON, Canada. Breeder of high class exhibition Golden Spangled, Silver Spangled, Golden Penciled, Silver Penciled and Black Hamburgs, Partridge Cochins, Javas, La Fleche, Crevecoeurs, Bantams, Sebrights, Golden and Silver; Rose Combs, Black and White; Japanese, all colors; Polish, Bearded and Plain; Booted and Buff Cochins; see my winnings—New York and Boston shows, it tells the tale; eggs, $4 per setting; stock for sale.

SILVER SPANGLED HAMBURGS—Heavy layers; pure bred; grand exhibition strain; eggs, $5.00 per 15; mixed Chicks, 8 cents each; P. O. Money Order only. Tinicum Poultry Farm, Fred Nixon, Erwinna, Bucks Co., Penna.

EGGS FROM MY CHAMPION MATINGS, $5 per 13; pen headed by 1st Crystal Palace (England), $4.00 per 13; incubator eggs, $6.00 per 100; stock and eggs always for sale; look up my winnings this year at Poughkeepsie, N. Y., White Plains, and Hudson. W. Tunnicliffee, Elisaville, Columbia Co., N. Y.

HOUDANS

HOUDANS — PEDIGREE BRED FROM 265 up-record females, and prodgeny my "Three Graces," three of the best Houdans yet produced; bred along same lines as by McAvoy for high glossy color, etc.; Chicks, my eggs, have won in our greatest shows; catalogue of cuts, testimonials, etc. A. E. Jones, Elkland, Pa., Vice-President, National Houdan Club.

I BREED HOUDANS FOR BEAUTY, combined with utmost utility. I claim the heaviest Winter layers, the largest snow-white eggs, extraordinary vigor and weight. When you buy eggs of me you get a square deal. You can depend absolutely on this. I have twice refused $1,000 for my best 15 hens. Eggs from these birds, at my price, are the cheapest Houdan eggs in America. Sent for my Houdan Book and real photographs. W. D. Gay, Essex, Iowa.

IF YOU KEEP HOUDANS AND WANT to improve your flock, "Quality" Houdans will help you. If you are just starting—get some eggs from good Houdans—Quality Houdans—they will please you and make money for you. I have no birds for sale, but have a few settings of eggs from some of the finest Houdans in America for sale; send me your address and I will send you a Houdan Standard; or, send me $3.50 and get 15 eggs from a pen averaging 95 1-7. J. Waltet Breeden, Bradford, Penna.

JAVAS

BLACK JAVAS. THIS IS TO CERTIFY that I have sold to W. J. Wheelock, Wadsworth, N. Y., my entire flock of Javas, including winners and progeny winners at Hagerstown, Wheeling, Columbus, Rochester. Charles Gilmore. Eggs, $1.50 per setting. Address, W. J. Wheelock, Wadsworth, N. Y.

JUDGING

HENRY R. INGALLS, GREENVILLE, N. Y., Secretary American Buff Wyandotte Club, Specialty Judge of Buff and White Rocks, Wyandottes, Leghorns; can handle all varieties; terms will be made to meet the ability of the show to pay expenses; write me before engaging judges; I would accept a few engagements to judge; have already booked for Heuvelton, N. Y. and Woonsocket, R. I.

F. H. DAVEY GREYSTONE, YONKERS, N. Y. Judging all varieties of poultry.

LANGSHANS

BLACK LANGSHANS—1908 WINNERS: Cock, 94; hen, 96; cockerel, 94¾; pullet, 95½. C. A. Ballou, Judge; eggs, $3 per 15; member National Langshan Club. Ariel B. Poultry Yards, Chas. H. Cutler, M. D., Prop., Peterboro, N. H.

BLACK LANGSHANS—I HAVE SOME fine birds. Will exchange eggs for Bantam eggs, any variety. Edwin Reichert, Archbold, Ohio.

VERY FINE PEN OF BLACK LANGshans for sale—ten pullets and one extra good cockerel. Twenty dollars takes the lot. They are cheap at double the price. Reason for selling them—lack of room. L. A. Hodge, Cobleskill, N. Y.

LEGHORNS

MRS. C. W. HARRINGTON, HARTFORD Mills, N. Y.—Buff Leghorns exclusively. For 15 years birds from my yards, for me and my customers, have won highest honors in the leading shows: Have won the Club Cup and three Special Club Ribbons. Eggs reduced. Breeders and chicks for sale. Prices reasonable.

ROSE COMB WHITE LEGHORNS—First class laying stock for sale in yearling hens and pullets at reasonable prices, quality considered. Eggs from best laying pens $2 per 30 balance of season; from Exhibition matings, $2 per 15. Can ship by Wells Fargo or United States Express. State your preference. Dr. Decker, Bradford, New York.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

ROCK HILL POULTRY FARM, F. W. Corey, manager — **OSSINING, N. Y.**

$100,000 for a Single Bird

Exmoor Farm, Lebanon, Pa., Paid $300 in Hard, Cold, Cash for This Bird

Did Exmoor Farms Pay It?

No! But we have $100,000 invested in the largest Poultry Farm of its kind in America. We breed 64 varieties of Chickens, Ducks and Geese; also Scotch Collies and Fox Terriers.

At the late Philadelphia Show we won 70 Prizes and 6 Silver Cups. We can show you over 10,000 ribbons won at America's leading shows.

Now, as to paying high prices for birds. We claim that when Exmoor Farms, Lebanon, Pa., paid $300 for the Buff Plymouth Rock Cockerel, that we paid the highest price for a single bird up to date, for there were no strings or conditions connected with this sale. We bought this bird, and this bird only.

We claim to own the best flocks of Buff Rocks and Leghorns in this country, and coupled with our 24 years' experience in the poultry business, we trust to keep this a fact.

Write us what you are interested in and allow us to quote you on either stock or eggs. We make a specialty of fitting out Poultry Plants and private estates.

THE LENOX SPRAYERS $3.

WE WANT AN AGENT to sell our sprayers to farmers, gardners, and poultry keepers. They all must spray and they know it, or lose their holdings. Now is the time to see them. We have some good circulars for agents to read, about selling our sprayers. Our sprayers will put a good agent on his feet Send $3 for a sample and get our wholesale price list. Bulb, nozzle, and valves does it all. Built of galvanized iron, never rust, never leaks; will spray the undersides of leaves on the trees, will reach the underside of the roost in the poultry house, spray so forcible reaches along ways and gets into all crevices and cracks where the trouble comes from. No stopping to pump air or to swear. We will send one to any reader where we have no agent. If you desire to become our agent send for a sample or a half dozen of them, with your first letter. You will receive them promptly, put them where it will be seen, put one in your buggy, and start your horse, your next letter will call for two or three dozen. Most of our agents are men of families and doing well. No use writing letters with lengthy questions. Send in your order and get a going, we guarantee you will make money, if there is a mark of business in you.

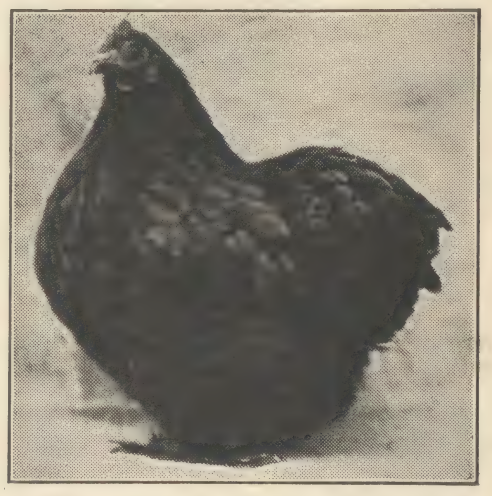
The American Fancier

VOL. XXVIII NEW YORK CITY, JUNE 1, 1908. No. 704



Bantams! Varieties and Their Keep

By JAMES B. N. FITCH, Mount Vernon, N. Y.
President The National Bantam Association

1st Buff Cochin Bantam Cock, Trenton, N. J., 1907, special for the Best Cochin Bantam in the show.

Bred and owned by Jas. B. N. Fitch.

1st Black Cochin Bantam Hen, Madison Square Garden, December, 1907, winning special for Best Cochin Bantam, also special for Best Feathered Legged Bantam.

Bred and owned by Jas. B. N. Fitch.

WE have in the Bantam fowl of today a miniature of almost all the larger varieties. There are Sebrights and Rose Combs, the Lilliputians of the various "tribe of Hamburg," the Game in its many colors, true to their larger progenitors. The Polish, occasionally a Leghorn pops up, and I have seen Barred Rock Bantams at Madison Square Garden the past two or three years. Wyandotte Bantams were begun in the Whites by our friend Deacon Sparks, of New Jersey. The Japanese Bantams, in their many varieties, also Light Brahmas, Dark Brahmas, R. I. Reds and last but not least, the Cochin Bantam, in Buff, White, Black and Partridge. Cuckoos are bred on the other side. I do not remember seeing any at any of our shows this side of the pond. But Cochin Bantams, to my mind, are the Bantams "par excellence" for pleasure or for profit. You can amuse yourself or raise enough to have squab broilers or roasts, frys or boiled (fricasee) and no matter how, you will find a nice, tender, juicy little piece of chicken meat. I have bred and raised them for twenty years and have yet to find their superior for the home table in small families. When the chick is first hatched it does not need nourishment of any kind for twenty-four hours, and will go forty-eight without ill results. I then feed a little hard boiled egg and after that they go on a broken rice diet, aided by a little wheat now and then for a change. I feed also beef scraps and plenty of lettuce or clover, all they will eat, and keep grit and charcoal before them at all times. They must be kept free from lice to thrive and you must understand

MR. JAMES B. N. FITCH,
President of the National Bantam Association

they have the same size louse as a large bird does, so what must the little fellows suffer?

More Bantam chicks die from lice than from all other causes put together—yes, I might say three times over, and be safe. Plenty of fresh water and shade is also a factor in growing Bantams as any other kind of poultry. Now for what some one might designate a "knock." But do not let anyone tell you, you need range for Bantams; the contrary is the truth. I have grown better Bantams in small yards with plenty of green stuff and other required feed than I ever could on acreage, and there are a few trying to get away from high stationed, close feathered Cochins. Let them get away from big grass runs, cut out all soft feed, use more rice and less mixed grains, and you will see a difference in a very short time. Do not think when I say small yard you are getting away from work; rather increasing it, as you have runs to dig up, oats or some other feed to plant and keep in shape, and naturally far more work than on a larger place.

But let the fancier take proper care of his flock and properly grow and mature them and he does not need many lying about the place idle, as they sell very rapidly. Place a little ad. with your paper and you will soon unload. If this has been any help to one "neophyte" in Lilliputian poultrydom I feel myself amply repaid and hope they will raise more and better Bantams and become members of the National Bantam Association, which they can do upon payment of $1.00 initiation fee and $1.00 for one year's dues. It is a duty incumbent on every bantam breeder to get "on the band wagon" and help us toot our horn for more Bantams, first, last and all the time.

1st and Special Buff Cochin Bantam Cock, Madison Square Garden, December, 1907.

Bred and owned by Jas. B. N. Fitch.

1st and Special Black Cochin Bantam Cock, Madison Square Garden, December, 1907.

By Joseph Shakespeare

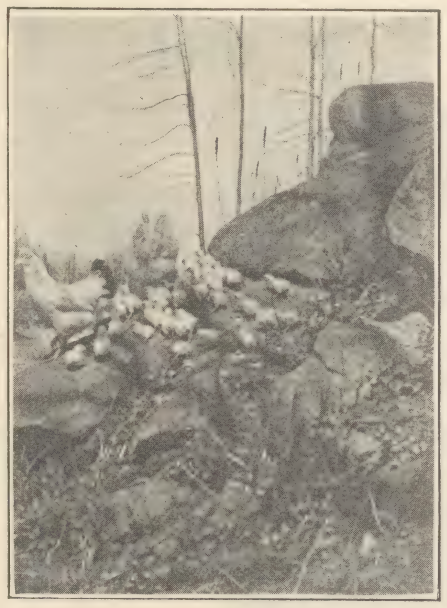
(Feathered Life, England)

THE close confinement to which the birds have been subjected, to shelter them against snowstorms, east winds, and rains, must now be put a stop to, and the youngsters must be allowed liberty and exercise, to recoup lost energy and muscular strength.

There will be plenty of work to do now among the earlier-hatched chickens, which should by now be well on their legs. If such are intended to furnish the breeding-pens next season, or to grace the exhibition-pen, they will need special attention from chickenhood to maturity. Birds intended for table use will, if allowed ample range on land where insect and vegetable life are abundant, need no special attention apart from the provision of good, sound foodstuffs till such time as they are relegated to the fattening coops. Birds intended for exhibition must now receive all the attention possible.

The work of providing the necessary shade has, by the dull weather experienced, been reduced to a minimum. The weather has changed to one of sunshine. The powerful rays of the sun will cause grumbling about tanned plumage and blistered lobes unless efficient shade is provided for the birds. Purity of colour counts much in the show-pen, and this can only be maintained by keeping the promising specimens well in the shade. By this it must not be imagined that the birds must be kept either closely confined or subjected to absolute darkness, either of which would ruin their constitutions. What is required is a convenient structure, to which the birds can be confined during the sunniest part of the day, and such a structure should be of ample size and airy, so as to render it as cool as possible. to prevent the premature springing of the combs. Nothing, in the writer's opinion, excels the open-fronted shed, facing south, and provided at its front with a blind sufficiently thin to admit light, but not strong sunshine. The floor of the shed may be covered with a good thickness of litter of some kind, so that the birds may be found employment among it searching for the mid-day feed of grain. There is generally too much close confinement imposed upon growing fowls; therefore, have the shed built as large as possible for the number of fowls it is to shade. Young fowls revel in cool, fresh air and exercise, and both they must have, or, depend upon it, they will have their revenge later on.

In the case of fowls intended for laying purposes, it is well to let them have all the liberty they can get; but even these should have some shady place to which they can resort when inclined. The pastures in many parts of the country are now providing an abundance of insect life—so much so that the earliest hatched birds will, if of a precocious nature, be brought into lay long before they are properly developed. Such must have a check put upon them, by being shifted occasionally to fresh quarters. What should be aimed at first is bodily development. Get bone, muscle, feather, and all that makes up the perfectly matured fowl, then look for eggs. The pullet that lays at four months is nothing to be proud of, either as a future breeder or as a profitable subject in the long run as an egg producer. What, in such a bird, should have gone towards building up its body, is expended in the production of eggs.



Weed out the wastrels the moment they can be detected. To neglect this important operation often means overcrowding, and of all the evils of poultrydom, overcrowding is the worst. Ventilation, proper feeding, cleanliness—in fact everything that should be right—is rendered the reverse by the foolish overcrowding tolerated in many poultry-yards.

Divide the sexes the moment they can be determined. This is old advice, but is well worth repeating. The cockerels may be run together, when they will generally live on good terms; otherwise, run an old cock with them to keep them in order.

Good feeding is essential to the perfect development of the growing stock. What should be aimed at is steady growth. No forcing foods must be allowed. Give good, plain foods in variety. It is thought by far too many than anything in the way of grains and meals will do for fowls. It won't do. Young fowls must have the soundest foods if the best is to be got out of them, either in the laying line, the breeding-yard, or the exhibition pen. By his I do not mean that all the patent foodstuffs on the market must be provided, although such are beneficial when rightly used. If the birds are given good, plain foods in the way of grains, meals, vegetables, and meat, they will thrive if the other conditions are right. Vary the birds' dietary. A change daily is necessary. One kind of food given too frequently soon jars upon the appetite. The poultry-keeper who varies his fowl's dietary gets the best returns for his wisdom.

S. C. White Leghorn Cock. Winner of 1st and special for best Leghorn in the show at Hagerstown 1905, 1st Syracuse, headed the winning pen at Trenton and Jamestown Exposition 1907. Owned by Rock Hill Poultry Farm, F. W. Corey, Mgr., Ossining, N. Y.

An early morning scene at Rock Hill Poultry Farm. Mother and babies out for a stroll.

Cleanliness results in good growth among the young birds. Once let insect pests get a firm hold upon them, or negligence prevail in the way of pure, cool water supply, or the supply of dusting material, sharp flint grit, and adequate fresh air, and their growth will be checked. Sprinkle slaked lime freely about the sleeping-places, and keep the floors free from the accumulation of excrements, so that pure air may be breather during the hot nights. In short, take every care of the young stock, so that, when old, they may better take care of themselves.

New Holstein, Wis.,

Will hold their sixth annual exhibition January 11th to 15th. $100 in gold and many specials will be offered. T. M. Campbell will judge. H. H. Greve, Secretary, New Holstein, Wis.

Rochester. New York.

The next annual show of the Genessee Valley Poultry and Pigeon Association will be held January 11-16, 1909, at Rochester. F. A. Newman, Secretary., P. O. Box 472, Rochester, N. Y.

Single Comb White Leghorn

By F. W. Corey

I began my experience with the Leghorns several years ago with a strong prejudice against them, as compared with our Wyandottes and Plymouth Rocks, for a general purpose fowl. I considered them too small, and had a vague idea that they were delicate and hard to raise, and I thought they did not amount to much as broilers or winter layers. Each succeeding year has gradually done away with my false ideas until now, I am not only willing, but anxious to admit that the Leghorns, and especially the S. C. White Leghorns, are, in my opinion, all things considered, one of the most profitable breeds for the market and poultry man to take up. I make this statement after carefully considering the merits of

One of the sixty colony houses found on the Rock Hill Poultry Farm.

our principal utility breeds, when kept under the same conditions and side by side in the same buildings for several years. I base my claim of equal value for the Leghorns on the following facts: First: Leghorn eggs average a much higher per centage of fertility and consequently will hatch a much larger per centage of chickens from the same number of eggs. I think we have averaged as much as 15 to 25% more chicks from our Leghorn eggs than from the larger breeds during the past few years. Second: Contrary to my former belief, I find the Leghorn chicks are hardier, more active and have been able to raise a slightly better per centage of the chicks hatched than of most of the other breeds. Third: I think most people, who have tried raising broilers, will agree with me when I say, to get any profit from broiler raising, we must not only hatch a fair per centage of the eggs, but we must raise most of the chicks hatched and must push them along and get them on the market as quickly as possible both because we get better prices the earlier we can dispose of them and because every day we feed them after it is possible to sell them, takes so much from the profits. For a quick growing chicken to be sold as squab broilers from seven to nine weeks of age, I know of no breed more profitable than the S.C. White Leghorn. Fourth: The laying qualities of this popular breed are so far superior to most other breeds that we can find few people who will dispute this claim. They are regular egg machines, laying a beautiful white egg, and when well fed and cared for, continuing to lay steady after many of the larger breeds are spending half their time trying to sit.

So much for their utility qualities, as I have tried to explain, their sterling worth has made me one of their strong supporters after carefully testing them by the side of our other varieties.

There is no bird that makes a more attractive appearance in the show

1st S. C. White Leghorn Hen at Jamestown Exposition, 1907, owned by Rock Hill Poultry Farm, Ossining, N. Y.

room when properly conditioned than the Leghorn and the thousands of breeders and fanciers who are showing them will willingly testify to their many good qualities.

There is one thing that the breeders and fanciers who have the welfare of the Leghorns at heart should stop and think about. No breed, no matter how attractive and well advertised they may be, can continue long to advance in popular favor after they commence to loose their utility qualities. Most exhibitors and judges are to-day giving preference to a Leghorn with a small fine comb and head. Some winning Leghorn females in large shows this past season had scarcely any more comb than our Plymouth Rocks had ten years ago. Eight times out of ten, the bird with a large comb is a better producer than the one with a small comb. Let us stop and think then what will be the result if we continue to use only the small combed birds in our breeding yards for several generations. I believe we should not attempt to breed too small a comb on our greatest egg producing breed.

Infertile Eggs.

Each year as the breeding season comes round we hear the same cry, "Eggs very unfertile," and in nearly every case the weather is blamed. Now, it is quite true that fowls will not produce eggs as strongly fertilized during very wet and windy weather as they will do when conditions are more congenial. But there are other causes for this disappointment. One other is in the feeding. Either they get too much over-heating and over-stimulating food, and perhaps become too fat, or the food is not calculated to produce vigor and health. Later in the season there will be abundance of green food and animal life, in the shape of insects, grubs, etc., of all sorts, and if we want our fowls to produce fertile eggs out of their natural season—that is to say, during the first three months of the year—we must supply the food and conditions lacking in nature. Extra meat rations are necessary, and especially a constant supply of vegetable food. Again, too many hens should not be run with one male thus early in the season—five or six will be ample for a vigorous cockerel; an old bird should have one or two less. But I think one of the most frequent causes of infertile eggs amongst amateurs is the fact that the birds are mated during the whole of the year. Thus, during the moulting time and the early part of the winter, they get run down and exhausted, and when eggs are required in the early months of the year for hatching, they are either infertile or contain such weak germs that they fail to hatch. The remedy in these cases is obvious. Separate the sexes as soon as hatching is completed, mate a month before requiring eggs for sitting, and provide food and housing conditions such as supplied by Nature from, say, March onwards.—*Feathered Life* (England).

* * *

We are informed that Gaston Faivre of 55 East 125th Street, N. Y. City, was convicted in Special Sessions yesterday through the efforts of the S. P. C. A. of selling Easter chicks Easter time in violation of a section of the Penal Code, which states "that a person who furthers any act of cruelty to any animal, or any act tending to produce cruelty, is guilty of a misdemeanor." This is the first time that the selling of Easter chicks has been construed as falling under this section, although the S. P. C. A. has been trying for years to stop the practice, on the ground that after the chicks are purchased they are allowed to starve, or are killed through the carelessness of children. Faivre was arrested after Special Agent Calhoun of the S. P. C. A. had bought several newly incubated chickens a few days before Easter, and had seen a little boy buy others. Sentence was suspended.

Toledo, Ohio

The Toledo Fancier's Co., of Toledo, O., is wide awake these days. A monthly meeting is held with good attendance. Their next show will be held Jan. 19 to 26. Many improvements are being planned. Larger cash premiums will be paid. More silver cups offered and a large and better show given. George Johnston was elected president. He is an enthusiastic breeder and has ample time to push the show. L. C. Taylor of Gibsonburg, O., was re-elected Sec.-Treas., his experience last year in that capacity and his years of exhibiting insuring the best of treatment to those who show at Toledo. Send your name that it may be put on our mailing list.

A Pair of Silver Wyandottes, The open-laced exhibition kind.
Owned by J. Reepmeyer, Jr., Craig, N. Y.

To National White Wyandotte Club Members

The result of the vote on meeting place for election of officers and time for same was a large majority, in fact, almost unanimous for "Niagara Falls the second week in August."

The Executive Committee of your club has asked President Graves to select and appoint twelve members in good standing to act on an auditing and investigating committee to meet at Niagara Falls in advance of the A. P. A. meeting in order that they may report to that body as well as to our Club. Before appointing members on the auditing and investigating committee, your president has been requested to ask an answer to the following questions: First—If selected as a member of the auditing and investigating committee, will you undertake to meet with the Executive Committee of your Club at Niagara Falls, N. Y., on August 7th, 8th and 9th? Second—Do you feel that you can and will, sit, act and render a just decision to the best of your ability as to whether or not Mr. Hallock has misappropriated or misused the Club funds, if appointed on said committee?

It is to be hoped that each and every member will turn out at this vitally important August meeting. All that is asked of you by President Graves, Mr. John F. Hollis, Member of the Executive Committee and your Acting Secretary-Treasurer H. P. Rankin, is that you come fair-minded and unprejudiced. We ask only for a "square deal" and ask it for all concerned. We *guarantee* that the "nigger" *shall* come forth "from the woodpile," and we shall not object to the "big stick" being used when he appears, regardless of the direction from which he may come; in fact, we believe it *necessary* that it be used if our Club is to be safeguarded against any further setbacks, or if it is to be abreast of the times in demanding clean, straight business from its officials, or if it is to go down in history as a club made up of men who are not afraid to stand for the right and who will not fail to come forward as men of principle and protect their club in a time of need.

* * *

The National White Wyandotte Club Catalogue, about which so much has been written and said, can be obtained by non-members for only 10 cents in silver. This is a most valuable book to any one interested in or breeding White Wyandottes and no one who contemplates breeding standard bred fowl that have not yet made their choice should do so without one. This catalogue has been issued by the world's largest specialty club and is full of valuable information concerning the *fashion* and *progress* of the world's most popular variety of fowl. There are only a few hundred of this famous book left and it is needless to say that they will not last long.

* * *

Regular membership fee is $1.
Annual dues to October 1st, 1908, $1.
Annual dues to October 1st, 1909, $1.

If you will send in your application at once your membership will date from the time it is received to October 1st, 1909. Thus you will be getting $3 for $1, one of our 1908 catalogues free and your name will appear in the 1909 catalogue, in the membership of the world's largest poultry association. Send your application today with $1, stating that you wish to take advantage of this special offer to Mr. H. P. Rankin, Acting Sec.-Treas., Hartington, Neb., who will be responsible personally for every penny paid to him.

Yours very truly,
H. P. RANKIN,
Acting Sec.-Treas.

Mr. Harry B. Miller Replies to Mr. Homer D. Hand

Clark's Summit, Pa., May 22, 1908.

Dear Editor: There appeared in this paper May 15th, an article written by Homer D. Hand of Scranton, Pa., in the interest of L. L. Bright. Mr. Hand claims to be acting in the interest of fair play, yet he misrepresents an article written by me in a previous issue, stating I failed to credit Mr. Bright with winning the Special for best collection my article clearly stated that he won the above Special and he fails to correct an error that did exist in my article, in which Mr. Bright was credited with winning Special for best cockerel, which he did not win, as he only won 3rd on cockerel. Mr. Hand also states that he is sure Mr. Bright's 1st New York pullet was not in the Scranton show as he saw her in his yards during the show. I claim that Mr. Hand is incompetent to judge, whether or not the pullet he saw in Mr. Bright's yards was the 1st New York pullet. Mr. Bright had more than one pullet at New York and Mr. Hand was not at the New York show, therefore he has no way of knowing which was the New York winner except what Mr. Bright has told him.

Now if Mr. Bright wants to be fair in this matter and has reached the point where he feels he needs assistance in his troubles, why does he go to Mr. Homer D. Hand, who was not at the New York show and has nothing to do with the Scranton Show where this controversy originated? Why don't he go to such men as F. O. Megargee, W. L. Weddigen, E. C. Ricker, J. W. Scheebel, Jr., or A. W Close? all of whom are officers or directors of the Scranton Poultry Association, whose duty it is to see that their exhibitors are protected; they are men known all over the United States as leading poultry fanciers. They were all at the New York show and saw Mr. Bright's exhibit there and saw them at the Scranton show; or, why don't he go to Judge Stanton of New York City, who saw his birds at New York and judged the Columbian Wyandottes at Scranton. A statement from such men would carry some weight with it.

Yours very truly,
HARRY B. MILLER.

The Guaranteed Fresh Leghorn Eggs

All have noticed in grocery stores throughout the country, the statement, "White Leghorn Eggs for Sale," especially among the higher class dealers. For this statement they usually obtain a better price. Recently a subscriber to THE AMERICAN FANCIER who had purchased many of these eggs for his table (unfortunately at that time not a breeder of poultry, but afterward deciding to breed a few birds) purchased an incubator, and the start was made with 100 of these absolutely fresh White Leghorn eggs; and, strange to relate, from a hatch of about 30 per cent. only two showed any signs of Leghorn type. The balance composed numerous varieties and colors known to poultry men.

The AMERICAN FANCIER
ESTABLISHED 1893.

EDITORIAL AND BUSINESS OFFICE REMOVED.

THE illustration on title page represents the S. C. Black Minorca hen which made the sensational winnings by capturing First and three Specials at Madison Square Garden, December, 1907. In addition to these winnings she was First and Special as pullet at Mineola in 1905 and at this place carried off First and Special as hen in 1906 and again in September, 1907, she received First and Special hen. In January, 1907, she appeared in the 4th pen at Madison Square Garden. At Richmond Hill she received 3rd as hen, but was not in show condition, being badly in molt. At Meridan, Conn., January, 1908, she received First and Special hen. At Rutherford, N. J., January, 1908, she captured First, Color Special, Shape Special and Special for second best bird in the show. At the last Madison Square Garden Show she was the center of attraction in Minorca alley, and many highly commented on her size and racy appearance, being true to the Minorca type. Others spoke of her grand color and exceptionally perfect comb, which we regret does not show to advantage in the illustration. The picture shows her just as she now appears with five sisters in the breeding pen in the yards of her owners, Billard & Middleton, who also bred and raised her as well as her ancestors on both sides for four generations.

* * *

Chicago, Ill., May 21, 1908.

Editor The American Fancier:

Dear Sir:—Since the information appeared in the different poultry magazines that Mrs. Paderewska paid $7,500 for a pen of White Orpingtons some people with whom I have spoken thought that this was some advertising scheme but others including myself did not believe so because we did not see what good it would do Mrs. Paderewska and furthermore, it would not be straightforward, and I told all with whom I talked that it was foolish for them to think that Mrs. Paderewska would allow the breeder from whom she bought these birds to publish any false or misleading statement.

I was very glad to see that you had a talk with Mrs. Paderewska and could tell the poultry men through your paper that she really did pay $7,500. Of course I could not say what the birds were worth because I did not see them, but I did believe that Mrs. Paderewska must have paid the price as she said in her letter which was published in different poultry papers to ship her $7,500 pen. Mrs. Paderewska is a foreigner, and I believe, as you say, that she did not understand anything about advertising and in fact I would not be startled to learn that she was very much surprised when she knew that the public found out what she paid for the birds. I hear that Mrs. Paderewska bought other birds in America and that she was very careful and bought only birds which met her fancy and paid the price asked without question.

Respectfully yours,
W. R. BALDWIN.

* * *

Last week we received a letter asking why it was that nowhere in the description of the interview with Madame Paderewska and our editorial comment was the name mentioned of the party who sold the $7,500 pen and who also had a page ad. in our May 15th issue. Our reply may be of interest to others and therefore we publish it herewith:

"Your favor of the 20th received. The article was written to tell our readers about the interview with Madame Paderewska and was not published to advertise the Kellerstrass Farm. Our advertising pages are for that purpose. It might also interest you to know that Mr. Kellerstrass never knew that we were going to interview Madame Paderewska.

At some time I hope to visit Kansas City and publish with illustrations a description of the Kellerstrass Farm, believing that it will interest our readers."

* * *

Some newspapers, that are supposed to be reliable, from time to time print very strange happenings in the poultry world. These are published as absolute facts, but we cannot believe their truthfulness in each instance. In one paper we see that at Springfield, Ill., the Secretary of the State's office is in possession of a perfectly formed snake found in a newly laid egg. Mrs. Henry Goines, of Golconda, it is claimed, found the egg and she turned it over to Dr. H. W. McCoy, it is stated, who sent it to his son to place in the State Museum. The Doctor, nor the newspaper, nor Mrs. Goines are able to suggest any theory for the presence of the reptile in the shell. One of the boys in our office wonders if the chicken could have been drinking.

Tennesse State Fair Show

The Poultry Exhibition at the Tennessee State Fair Sept. 21-26 at Nashville, Tenn., will be one of national importance. Many of the most prominent breeders in the country have signified their intention of making the great Tennessee State Fair Show this fall, and preparations are under way for making this show one of the greatest State Fair Shows in the United States. Nashville is situated right in the center of the Middle and Southern States, and by virtue of its location is one of the best points in the country for holding a national show. Over 200,000 people visited this fair last year, and the poultry exhibitors were loud in their praise of the results they obtained from this exhibition. Arrangements have been made with the Spratts Patent Co., of East Orange, N. J., to coop and feed the show. Judges J. H. Drevenstedt, W. C. Pierce, S. T. Campbell, and C. W. Fowler have been retained to award the premiums. The premium list will be especially attractive this year, and nothing will be left undone to make a winning at the State Fair Show of Tennessee of great importance to the breeder. 50,000 copies of the Tennessee State Fair Poultry Show bulletin will be issued shortly and distributed all over the country. For official premium list and entry blanks address John A. Murkin, Supt., Nashville, Tenn.

The constant advertiser is the one who is sure to win out. The *Southern Poultry Magazine* says:

"The failure of a trial advertisement has set more poultry breeders against advertising than any other factor in publicity. This is a pity when the indefiniteness of a trial advertisement is considered. A trial advertisement represents low water mark—absolute bottom. It is not decisive. It has no more value as evidence than a first meeting with an individual who afterwards becomes you friend. Of all the advertisements in a long campaign, the first ad. is the worst, though it is written by an adept. If it is written by a novice in advertising that novice will never write a weaker one. It is like the first discord struck out of the piano by the beginner. If a student becomes disgusted with such an initial effort he will never get farther, and if a breeder abandons his advertising intentions because the first advertisement was unremunerative, he will never get farther. The first attempt of anything is valuable only as an educator."

* * *

The one-day chick is in demand. In a poultry supply house in New York over 2,000 chicks from one to three days old have been sold. The reason for this demand, we believe, is due to the fact that there are a great many who are afraid of the incubator and believe that incubation requires experience. There is a good deal of truth in this as more satisfactory hatches can be obtained by those more experienced in the proper handling of an incubator. And then there are a good many who believe that after the chick is hatched it is very easy to brood them. The price of chicks sold in New York range from $14 to $20 per hundred and the most popular are the Leghorns, Barred Rocks and Wyandottes. These seem to be the varieties commonly known among the public as a few of the best utility fowl, and these breeds have been the standard for a good many years. Of course those better posted in poultry matters know that there are quite a few other breeds which have come to the front during the last few years which are their equal or superior in some respects.

* * *

Sunflower seeds are claimed to give a fine flavor to eggs and are much used by the French people for that purpose. Remember this when you plant your garden.

* * *

Many of the late A. A. Parker's Black Red and Red Pyle Game Bantams were purchased by F. E. Welcome, New Haven, Conn., who has bred Game Bantams for over fifteen years.

BALTIMORE will hold a poultry and pigeon exhibition January 5-9, 1909. This will be good news to the fancy. In years past Baltimore has held many first class shows. In the near vicinity of Baltimore there are hundreds of fanciers who are ever ready to support an exhibition.

At a meeting held May 14th the Maryland Poultry and Pigeon Association was organized and a Board of Directors elected. The following officers were elected. President E. M. Parrish; Vice-President, C. H. A. Meyer; 2d Vice-President, P. H. McCormick, 3d Vice-President, Miss O. E. Remsen; Treasurer, Chas. M. Diffenderfer; Secretary and Superintendent, Geo. O. Brown.

* * *

Many believe Chicago will not have an exhibition this coming winter. This is an error. Although last year was not as successful financially as previous seasons, the shortage in the funds was due to the purchasing of new cages which cost over $2,000. We are glad to hear these facts as the West needs the Chicago exhibition. The dates claimed for next season are January 25-30, 1909.

* * *

In another column of this issue will be found a notice from Dr. L. H. Jones appointing Mr. Alex. Smith Secretary and Treasurer of the American Pigmy Pouter Association.

Something must be done to get matters adjusted and in working order before the coming show season.

The Pigmy has many admirers and many ready to support the club, providing they have the assurance that the club is in a healthy and prosperous condition.

New York and Boston (the latter the Club show) had a rather light entry considering the strength of the club last season and we hope next season will show a vast improvement.

The list of specials caused no little trouble to the few interested. In many clubs this is a source of much displeasure and we believe the most satisfactory way is to have the secretary obtain by mail what each one will contribute, cash preferable, and then have a committee appointed to distribute these among the classes as best they can without favor to any. Should a member prefer to offer a cup, etc., well and good, but the committee to place it. This has been done in specialty clubs and has proven a success. The above applies to all specials offered through the club. The donor can have proper recognition in the premium lists, etc., by such wording as, Mr. —— presents to the club a silver cup valued at ——. Should this plan be followed we are sure all varieties would be properly taken care of.

All fanciers interested in the Nun should drop a line to Mr. E. P. Washburn. A few years ago quite a number of Nuns of high quality were imported into this country, among them being Crystal Palace winners. There

is no doubt that there are many really high class birds at the present time in the different lofts and with a little energy the Nun can be quickly brought to the fore.

The variety, we should think, would be ideal for the beginner in the pigeon fancy to keep, as it is hardy, and a good breeder. The peculiar markings of the breed will give plenty of scope to exercise skill in breeding.

* * *

England during the past month has lost two well-known fanciers in the death of Messrs. W. G. Flanagan and O. E. Cresswell.

Mr. Flanagan was one of the foremost breeders of Dragoons and was President of the Ornithological Society for thirty years. Mr. Cresswell was president of the Pigeon Club and an ardent pigeon fancier.

Wants A Nun Club.

Salem, Mass., April 2, 1908.

H. M. Pockman, Editor American Fancier:

Owing to the increased interest taken in Nuns and the encouragement already received I have been asked to form a Nun Club so all you Nun breeders get busy and send in your names and we will have it going ready for the Fall shows. It is imperative that we should start at once.

Yours truly,
E. P. WASHBURN.

To Members of the American Pigmy Pouter Association.

Gentlemen:—As president of the above Association I have appointed Mr. Alex. Smith, of Glen Cove, L. I., Secretary and Treasurer.

At the last meeting of the Club, held at Boston, January 15th, 1908, a committee was appointed to take action regarding the unfilled office of Secretary and Treasurer, but as the chairman, Mr. A. E. Smith, resigned shortly afterward, I have used the power vested in the President to appoint Mr. Alex. Smith Secretary and Treasurer to fill the said office until the next election of officers.

All correspondence relative to the Club should be addressed to Mr. Alex. Smith, Glen Cove, L. I.

L. H. JONES,
President.

The Properties of the Dragoon

By C. H. Tattersall

(Writing in Pigeons and Poultry, England)

Breeding Dragoons.

IT is impossible to give any detailed advice on mating Dragoons which would be of any value, as the problem varies with each pair mated together. There are a few points, however, to which it may be worth while to call the novice's attention.

To commence with, obtain birds from a well-known breeder, and remember the best birds will ultimately prove the cheapest. Keep to the one strain for some time, selecting the best each year, and don't be induced to part with the best on any account. Don't buy often. Progress will be much more rapid by holding on to your own best youngsters, and introducing from time to time an odd bird of the same original strain excelling in the points you find deficient in your young stock.

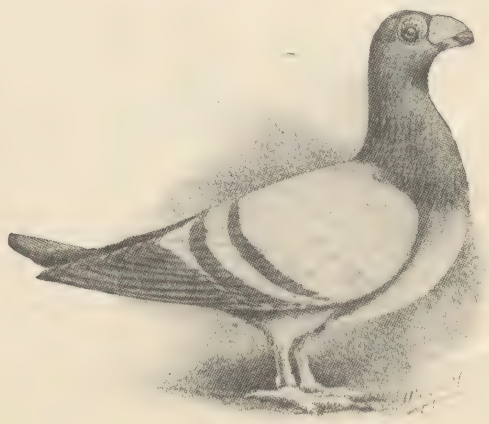
The continual attempt to purchase a bird worth £10 for 10s. is the rock on which the young fancier most frequently suffers shipwreck. He mates up every bird so bought in the hope that the pair may throw something good. Occasionally, perhaps one in ten thousand times, it may but the fancier will grow grey waiting for success of this kind. On the contrary, pair up your best cock with the hen you consider best suited for him. Don't attempt to average your pairs. Make every attempt to find your best pair, and then leave them together. In the same way, go on with your second pair, and so on. Don't breed from any pair that does not show some reasonable probability of producing typical specimens. Far better breed from two fair pairs than twenty pairs of wasters, no matter what their pedigree.

I probably pair my birds on paper at least half a dozen times during the winter before finally deciding on what is the best, and I like to pair birds together whose parents and grandparents show the same good qualities, but not the same faults.

I am not an advocate for very close line breeding. This method produces in each generation a greater proportion of young birds showing the good and bad qualities of the bird from which the line is taken, and presumably would ultimately lead to a generation exactly reproducing the original bird. This, however, it not what we want. The perfect bird has yet to be produced, and the ideal is most elusive, ever slipping away from us as we reach forth to grasp it; consequently, what we want to produce is variation on certain lines. Now crossing is the most effectual way of producing variations, but to keep some control over the direction of the variation it is best to retain some relationship, and not to cross out too widely from the original strain.

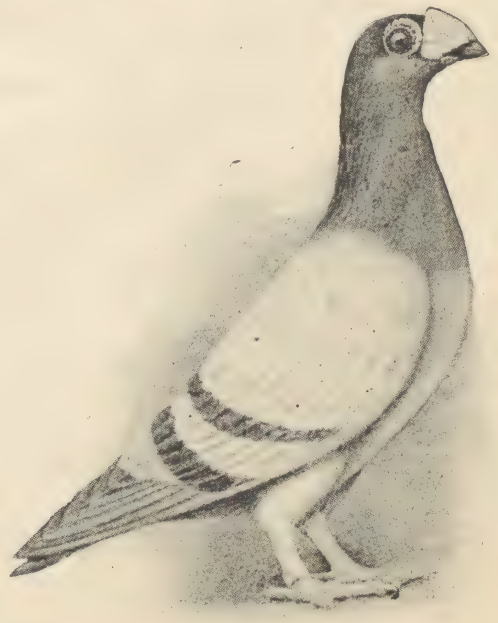
Thus, while every fancier who is successful as a breeder in-breeds fairly closely, either consciously or unconsciously, this in-breeding is really of the close type indicated by the term line-breeding, the breeder being more keenly on the look out for suitable outcrosses than to keeping the strain more and more concentrated on one line.

If healthy birds are used, the fancier need have no fear of in-breeding too closely until he finds fertility failing.



Standard.

The EYE CERE is an extraordinary growth of the skin surrounding the eye, and including the eyelids. In substance it should be very thin, anything approaching a fleshy substance of cere being most objectionable. In its perfect condition it is arranged in two lines below the eye and three above it, these lines converging at the front and back of the eye. At the point of junction behind the eye the cere is thinnest and most narrow, giving the appearance known as pinching. The cere at the point of junction in front of the eye grows thickest and most fleshy as shown in the illustration, No. 2. The inner ring which runs completely round the eye is the edge of the eyelid, and should never be meddled with unless absolute necessity arises. This inner ring should show no folds and should form an even line completely round the eye. The outer ring runs also completely round the eye, and lies next to the inner ring on the lower side, but much further from it above, where it is separated from it by an intermediate line of cere. These are well seen in the accompanying illustrations. These rings of skin are subdivided into small nodules divided by lines running in various directions, and producing the beautiful effect, termed lacing.



A great deal has been said from time to time as to the artificial production of good ceres, but, be he ever so clever, no one can even approximately imitate the natural appearance of a cere of the correct texture and formation, although such a cere might be improved, and probably often is, by the removal of the excrescencies.

LONG AND THIN NECKED BIRD WITH DOWN-FACE

INCORRECT CARRIAGE. LONG IN FEATHER

CORRECT CARRIAGE, LENGTH OF FEATHER & NECK

The colour of the cere varies in the different varieties. Thus blue chequers should have a black cere with a bluish bloom upon it; blues, red chequers and grizzles, a deep blue coloured cere, with a bloom of paler blue; silvers and silver chequers, a pale, but distinctly blue cere, with a whitish bloom; reds and yellows, a flesh-coloured cere; and whites, as white a cere as possible. Speaking generally, pinkiness of cere is to be deprecated, but it should not be forgotten that in silvers, silver chequers, reds, and yellows, the best ceres are pinky when not quite in the best of condition.

In breeding for cere care should be taken not to put two heavy cered birds together, and such heavy cered birds should always be paired to young birds with a fine texture of cere. Ceres can be reduced by breeding young birds together.

The NECK should be comparatively short and full, although quite free from gullet. It should taper from the head to the shoulders, not quite hiding the wing butts. This short, tapering and full neck makes a wonderful difference in the bird's appearance, long or thin necks often completely spoiling the smart appearance of an otherwise typical Dragoon.

The BODY should be moderate in size, broad at the shoulders, flat on the back, deep in the keel, with a strong, straight breast-bone. It should be narrow at the pelvis, thus retaining the characteristic wedge shape in the body as in the skull and wattle.

The TAIL should be moderate in length, projecting about five-eights of an inch beyond the end of the flights, and just clearing the ground when the bird carries itself in a proper position. The LEGS should be moderate in length, placed rather far back, and nicely bent at the hocks. They should be strong, and there should be no malformation of the feet. The WINGS should be strong and well covered with feather. Both primary and secondary flights should be broad and the quills strong. The wing butts should project slightly.

The faults of the body shape are narrowness of shoulder, flatness of sides, shallowness of keel, crooked breastbone, too great width of the pelvis and hog shaped back. Some of these faults are most noticeable in the pen, others in the hand. I am of opinion that those faults which are noticeable in the pen should weigh rather more than those which are only observable in the hand. Thus a hog-backed, narrow chested bird, or shallow keeled bird, looks worse than one which has only a wide pelvis or crooked breast-bone. From a breeder's point of view the two latter points are important, and good bodies should be insisted upon for all stock purposes.

Closely connected with these properties of body, legs and neck is the most important question of CARRIAGE. Much debate and variance of opinion has often been seen at the pen side in the large shows on this important, and, in my opinion, vital points. Many breeders are of opinion that if a bird does not show too much daylight underneath it, carries its tail clear of the ground, and holds its head in the proper position, the carriage is all that is to be desired. This does not at all fit with my ideas, which I will endeavor to describe, although the accompanying illustration gives a clearer idea of my meaning than any verbal description can.

The bird should stand almost erect with the neck stretched out, and the head carried in the proper position upon it. The legs should be nicely but not too much bent at the hocks, and the thighs should be well hidden in the feather. The tail continuing the line of the body to the ground should almost touch. With this carriage a long necked bird would never receive a second look from a judge, and a long feathered bird is an impossibility, as unless the feather is fairly short the bird cannot assume this position, as it would appear to be sitting on its tail.

Too much importance cannot well be paid by our judges to this point of carriage. This will shut out the boaty, long feathered, and long necked birds absolutely and mere excellence of skull properties alone should not place such birds over the more cobby typical specimens, except where the latter are very deficient in head properties.

A Dragoon should measure when stretched out about 15 inches in length from the tip of the beak to the end of the tail, and an adult in good health should weigh 18 to 21 ounces. The whole length is divided into head and beak, 2¼ inches (in this position), neck 2⅜ inches, body 5⅛ inches, tail 5¼ inches. And any measuring of the bird which does not take into account the proportions of the different parts which make up the full length is of little value. These figures are liable to some variation, as there are really good birds both over and under the figures named.

Much has been written from time to time about the excessive length of feather of winning birds, and often they have deserved all that has been said. It would be better though to pay more attention to carriage, as this involves both proper length of feather and many other properties.

In breeding, body properties are most important. The hog-backed and long necked birds are especially liable to reproduce their faults, and as far as practicable should be discarded. Birds of good body properties and good carriage should be especially treasured, even if they fail somewhat in head points, as this property is so rare at the present time.

White Indian Game Cock, weight 11 lbs. Winner of 12 firsts, owned by Frank M. Thomas, Jr., Catskill, N. Y.

Raising Ducks, When Feed is High

By THEO. F. JAGER

In a recent issue of THE AMERICAN FANCIER Mr. A. E. Jones, replying to my notes under "Water Fowl," gives an interesting account of his success with water fowl. The promising trade of the first season, when he was able to get 25 cents per pound for young ducks, a very good price beginning and end of season considered, shows that a demand can be created for a smaller number of birds at fancy prices in almost any neighborhood. We are apt to get fooled only, if we increase the capacity beyond the local demand. We must always advance slowly in the duck business, and feel our way and never flood the market, be it now the small home town or the large city. The old universal law, that demand creates supply and that the prices for the latter are controlled by the former, is always true and as soon as we oversupply the demand, our prices must take the necessary drop. Almost any family is willing to take a pair of chickens every week in the year, if the price is right and in conformity with the family pocketbook. It is different with ducks. The American taste for ducks during warm weather is as yet not universal. Most people think, ducks are only good eating after the "Frost is on the pumpkin and when the fodder is in the shock," and the duck raiser (who resides distantly from large cities, where they are better educated for summer ducks), must make it a point to always keep within the lines of a sure demand.

A duckling that is approaching the fattening stage, say six to seven weeks, has up to this time consumed less than 40 per cent of the total cost of feed, if we intend to terminate its life at eight or nine weeks. The bulk of the cost for feeding comes during the latter few weeks, when the birds are at it hot and heavy to gulp down the food. Farms that have waste lands, meadows, etc., should in this cse, when the demand seems to be slacking up, allow the birds the fullest liberty and bring them down gradually to half ration of grain. The birds will be slower in fattening, it is true, unless the pasture is very rich, but the expense of keeping will be reduced over one-half.

If brewer's grains can be had from local concerns, generally offered at from ten to twelve cents per bushel and often furnished without any charge whatever, it may be used as an addition to the grain mixture. I have used as much as one-third of the bulk of same for weeks and only discontinued it about ten days before killing, when a solid, heavy grain ration was again given, in order to eliminate the taste and general flabbiness of meat, that it is apt to give.

The again, if ducks are going to be a drug on the local market, we may refrain from setting too many eggs, rather sell them for hatching or dispose of them to bakers, etc., who are always willing to give a hen egg beating price for them or we can raise the youngsters for somebody's breeding birds. "Ducks are the easiest thing in the poultry line to raise," as Mr. Jones rightly says, and therefore we must be doubly cautious not to overdo the thing, just because they are easy to produce. Let us always keep in close touch with our market and just raise enough to supply it fairly well and rather fall short of the demand than to crowd it; or let us take the advice of the *Baltimore American*. If your business is not all it should be, "don't sit down, hold your hands and grumble about it. Hustle to make it better. In other words, hunt a market and advertise.

DARLING'S BEEF MEAL

Feed it to your chicks and produce large, well developed bodies, quick growth, full feathering, and fine layers. It is the ideal developing food because it contains

Over 50% Protein

A clean, sweet, wholesome product, free from mustiness and taints. Cheapest developing food you can buy because it does most for chicks and fowls. Best substitute in the world for bugs and worms.

Per 100 Pounds

$1.90 F. O. B. Chicago — $2.25 F. O. B. Chicago
